Technical Information

**Condumax W CLS19**

Conductivity sensors
Two-electrode sensors with
cell constants $k = 0.01 \text{ cm}^{-1}$ or $k = 0.1 \text{ cm}^{-1}$

**Application**
Measurement in pure and ultrapure water:
- Monitoring ion exchangers
- Reverse osmosis

The measuring range of the sensors depends on the cell constant $k$:
- $k = 0.01 \text{ cm}^{-1}$: 0.04 to 20 $\mu$S/cm
- $k = 0.1 \text{ cm}^{-1}$: 0.1 to 200 $\mu$S/cm

Sensors with a Pt 100 temperature sensor are used together with conductivity transmitters equipped with automatic temperature compensation:
- Liquiline M CM42
- Liquisys M CLM223/253

For measurement of specific resistance, $\Omega \cdot \text{cm}$ measuring ranges are available in the menus of these transmitters.

**Your benefits**
- Installation in pipes or flow chambers
- Pt 100 temperature sensor for temperature compensation
- Compact design
- Very good price

The conductivity of liquids is measured with the following measurement setup: Two electrodes are immersed in the medium. An AC voltage is applied to these electrodes which generates a current in the medium. The electric resistance or its reciprocal value, the conductance $G$, is calculated according to Ohm’s law. The specific conductivity $\kappa$ is determined using the cell constant $k$ that is dependent on the sensor geometry.

Important properties

- **Electrodes**
  Condumax W CLS19 has coaxial measuring electrodes made of polished, stainless steel 1.4571 (AISI 316Ti).

- **Temperature sensor**
  In addition, a Pt 100 temperature sensor is installed to measure the medium temperature.

- **Easy connection**
  The sensors are connected via a 4-pole DIN-plug that can be secured with a screw. For introduction of the measuring cable, the plug is equipped with a Pg 9 cable gland.

- **Installation**
  The sensor can be installed directly via the NPT $\frac{1}{2}$" process connection.
  Mounting the sensor in cross or T-pieces with DN 20 requires a PVC-threaded coupling that is available as accessory.
  For easy installation in cross or T-pieces with DN 32, 40 or 50, adapter couplings (made of PVC for cementing) and a 1½" clamp coupling (made of PVDF) are available as accessories.

- **Durability**
  The sensor is pressure-proof up to 6 bar at 20°C (87 psi at 68°F) and can be applied with temperatures of up to 60°C at 1 bar (140°F at 14.5 psi).
Measuring system
A complete measuring system comprises:
- a CLS19 conductivity sensor
- a transmitter, e.g. Liquisys M CLM253
- a CYK71 measuring cable

Installation

The sensors are mounted directly via the NPT ½" process connection. Optionally, they can be installed in cross or T-pieces.

When mounting the sensor, make sure that the electrodes are completely wetted by the medium. When working in ultrapure water, ingress of air must be avoided since dissolved air, particularly CO₂, may increase conductivity by up to 3 µS/cm.
