Proline Promag 55S

Electromagnetic Flow Measuring System

Flow rate measurement of liquids with solids content or inhomogeneous liquids

Application

Electromagnetic flowmeter for bidirectional measurement of liquids with a minimum conductivity of $\geq 5 \mu\text{S}/\text{cm}$ – in particular fluids with solids, and fluids which are abrasive, inhomogeneous or tend to build-up, for example:

- Chemical/mechanical pulps, paper pulp or wood pulp with solids contents up to 15 Vol.-%
- Fruit mashes, fruit concentrates and final products (salad dressings, soups with vegetable pieces)
- Slurries containing high amounts of sand or stone with an abrasive effect, e.g. ore slurry or mortar
- Chemically inhomogeneous fluids (e.g. additives)
- Thick wastewater sludges
- Flow measurement up to $9600 \text{ m}^3/\text{h}$ (42267 gal/min)
- Can be used up to $+180 \text{ }^\circ\text{C}$ ($+356 \text{ }^\circ\text{F}$) and max. 40 bar (580 psi)
- Fitting lengths as per DVGW/ISO

Application-specific linings and electrodes:

- Natural rubber, hard rubber, polyurethane, PTFE or PFA linings
- Flat, bullet nose, neck, bow or brush electrodes

Approvals for hazardous area:

- ATEX, FM, CSA

Connection to process control system:

- HART, PROFIBUS PA, FOUNDATION Fieldbus

Your benefits

Promag measuring devices offer you cost-effective flow measurement with a high degree of accuracy for a wide range of process conditions.

The **Proline transmitter concept** comprises of:

- High degree of efficiency due to the modular device and operating concept
- Software options for: electrode cleaning, advanced diagnostics, calculation of mass flow and solids content

The robust **Promag S sensors** offer:

- Universal devices, even for difficult fluids
- Excellent accuracy and repeatability
- High resistance to abrasion thanks to industry-optimized linings and measuring electrodes
- Optimum operational safety due to advanced, permanent self-diagnosis
- Simple installation and commissioning
- Insensitive to vibration
- No pressure loss

Function and system design

Measuring principle

Faraday's law of induction states that a voltage is induced in a conductor moving in a magnetic field. In electromagnetic measuring, the flowing medium corresponds to the moving conductor. The induced voltage is proportional to the flow velocity and is detected by two measuring electrodes and transmitted to the amplifier. Flow volume is computed on the basis of the pipe's diameter. The constant magnetic field is generated by a switched direct current of alternating polarity.

$$U_e = B \cdot L \cdot v$$

$$Q = A \cdot v$$

- U_e* induced voltage
B magnetic induction (magnetic field)
L electrode gap
v flow velocity
Q volume flow
A pipe cross-section
I current strength

A0003191

Measuring system

The flow measuring system consists of the following components:

- Promag 55 transmitter
- Promag S sensor (DN 15 to 600 / ½ to 24")

Two versions are available:

- Compact version: Transmitter and sensor form a single mechanical unit.
- Remote version: Transmitter and sensor are installed separately.

Measurement of solids flow rates

In combination with a density meter, e.g. with "Gammapilot M" from Endress+Hauser, Promag 55S also determines the throughput of solids in mass, volume or percentage rates.

The following order specifications are required for this: order option for software function "Solids content flow" (F-CHIP) and order option for a current input.

Solids content flow measurement (*m*) with the aid of a density and flow measuring device. If the solid density (ρ_s) and the density of the carrier liquid (ρ_c) are also known, they can be used to calculate the solids flow.

- 1 Flow measuring device (Promag 55S) → volume flow (\dot{V}). The solid density (ρ_s) and the density of the transport liquid (ρ_c) must be entered in the transmitter.
- 2 Density measuring device (e.g. "Gammapilot M") → total fluid density (ρ_M) (transport liquid and solids)

Input

Measured variable	<ul style="list-style-type: none"> ■ Flow rate (proportional to induced voltage) ■ Conductivity (without temperature compensation)
Measuring range	<ul style="list-style-type: none"> ■ Flow rate: Typical $v = 0.01$ to 10 m/s (0.03 to 33 ft/s) with the specified measuring accuracy ■ Conductivity $s = 5$ to 2000 μ/cm not for sensors without reference electrode (Promag S with brush electrodes)
Operable flow range	Over 1000 : 1
Input signal	<p>Status input (auxiliary input):</p> <p>$U = 3$ to 30 V DC, $R_i = 5$ kΩ, galvanically isolated Configurable for: totalizer(s) reset, positive zero return, error-message reset</p> <p>Current input:</p> <p>active/passive selectable, galvanically isolated, full scale value adjustable, resolution: 3 μA, temperature coefficient: typically 0.005% o.f.s./$^{\circ}$C (0.003% o.f.s./$^{\circ}$F)</p> <ul style="list-style-type: none"> ■ active: 4 to 20 mA, $R_i \leq 150$ Ω, $U_{out} = 24$ V DC, short-circuit proof ■ passive: $0/4$ to 20 mA, $R_i \leq 150$ Ω, $U_{max} = 30$ V DC

Output

Output signal	<p>Current output:</p> <p>active/passive selectable, galvanically isolated, time constant selectable (0.01 to 100 s), full scale value adjustable, temperature coefficient: typically 0.005% o.f.s./$^{\circ}$C (0.003% o.f.s./$^{\circ}$F), resolution: 0.5 μA</p> <ul style="list-style-type: none"> ■ active: $0/4$ to 20 mA, $R_L < 700$ Ω (for HART: $R_L \geq 250$ Ω) ■ passive: 4 to 20 mA; supply voltage V_S: 18 to 30 V DC; $R_i \geq 150$ Ω <p>Pulse/frequency output:</p> <p>active/passive selectable (Ex i version passive only), galvanically isolated</p> <ul style="list-style-type: none"> ■ active: 24 V DC, 25 mA (max. 250 mA over 20 ms), $R_L > 100$ Ω ■ passive: open collector, 30 V DC, 250 mA ■ Frequency output: end frequency 2 to 10000 Hz ($f_{max} = 12500$ Hz), on/off ratio 1:1, pulse width max. 10 s ■ Pulse output: pulse value and pulse polarity selectable, pulse width configurable (0.05 to 2000 ms) <p>PROFIBUS PA interface:</p> <ul style="list-style-type: none"> ■ Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated ■ Profile version 3.0 ■ Current consumption: 11 mA ■ Permissible supply voltage: 9 to 32 V ■ Bus connection with integrated reverse polarity protection ■ Error current FDE (Fault Disconnection Electronic): 0 mA ■ Function blocks: $2 \times$ analog input, $3 \times$ totalizer ■ Output data: volume flow, calculated mass flow, totalizer 1 to 3 ■ Input data: positive zero return (ON/OFF), totalizer control, value for local display ■ Cyclic data transmission compatible with previous model Promag 35S ■ Bus address adjustable via miniature switches or local display (optional) at the measuring device
----------------------	--

FOUNDATION Fieldbus interface:

- FOUNDATION Fieldbus H1
- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- ITK version 5.0
- Current consumption: 12 mA
- Inrush current: < 12 mA
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Function blocks:
 - 5 × Analog Input (execution time: 18 ms each)
 - 1 × PID (25 ms)
 - 1 × Digital Output (18 ms)
 - 1 × Signal Characterizer (20 ms)
 - 1 × Input Selector (20 ms)
 - 1 × Arithmetic (20 ms)
 - 1 × Integrator (18 ms)
- Total VCRs: 48
- Total link objects in VFD: 40
- Output data: volume flow, calculated mass flow, temperature, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), reset totalizer
- Link Master (LM) functionality is supported

Signal on alarm

Current output:
 Failsafe mode selectable (e.g. according to NAMUR recommendation NE 43)

Pulse/frequency output:
 Failsafe mode selectable

Relay output:
 "de-energized" in the event of a fault or power supply failure

Load

See "output signal"

Low flow cut off

Switch points for low flow cut off freely selectable.

Galvanic isolation

All circuits for inputs, outputs, and power supply are galvanically isolated from each other.

Switching output

Relay output:
 Normally closed (NC or break) or normally open (NO or make) contacts available
 (default: relay 1 = NO, relay 2 = NC),
 max. 30 V / 0.5 A AC; 60 V / 0.1 A DC, galvanically isolated.
 Configurable for: error messages, empty pipe detection (EPD), direction of flow, limit values.

Power supply

Electrical connection measuring unit

**Cable specifications
(remote version)**
Coil cable

- 2 × 0.75 mm² (18 AWG) PVC cable with common, braided copper shield (∅ ~ 7 mm / 0.28")
- Conductor resistance: ≤ 37 Ω/km (≤ 0.011 Ω/ft)
- Capacitance: core/core, shield grounded: ≤ 120 pF/m (≤ 37 pF/ft)
- Operating temperature:
 - Cable not permanently routed: –20 to +80 °C (–4 to +176 °F)
 - Cable permanently routed: –40 to +80 °C (–40 to +176 °F)
- Cable cross-section: max. 2.5 mm² (14 AWG)

Signal cable

- 3 × 0.38 mm² (20 AWG) PVC cable with common, braided copper shield (∅ ~ 7 mm / 0.28") and individually shielded cores
- With Empty Pipe Detection (EPD): 4 × 0.38 mm² (20 AWG) PVC cable with common, braided copper shield (∅ ~ 7 mm / 0.28") and individually shielded cores
- Conductor resistance: ≤ 50 Ω/km (≤ 0.015 Ω/ft)
- Capacitance: core/shield: ≤ 420 pF/m (≤ 128 pF/ft)
- Operating temperature:
 - Cable not permanently routed: –20 to +80 °C (–4 to +176 °F)
 - Cable permanently routed: –40 to +80 °C (–40 to +176 °F)
- Cable cross-section: max. 2.5 mm² (14 AWG)

- a *Signal cable*
b *Coil current cable*
- 1 *Core*
2 *Core insulation*
3 *Core shield*
4 *Core jacket*
5 *Core reinforcement*
6 *Cable shield*
7 *Outer jacket*

As an option, Endress+Hauser can also deliver reinforced connecting cables with an additional, reinforcing metal braid. We recommend such cables for the following cases:

- Directly buried cable
- Cables endangered by rodents
- Device operation which should comply with the IP 68 (NEMA 6P) standard of protection

Operation in zones of severe electrical interference

The measuring device complies with the general safety requirements in accordance with EN 61010-1, the EMC requirements of IEC/EN 61326 and NAMUR recommendation NE 21.

**Caution!**

Grounding of the shield is by means of the ground terminals provided for the purpose inside the connection housing. Keep the stripped and twisted lengths of cable shield to the terminals as short as possible.

Power consumption

AC: < 45 VA at 260 V AC; < 32 VA at 110 V AC (incl. sensor)
DC: < 19 W (including sensor)

Switch-on current:

- max. 2.00 A (< 700 ms) at 20 V AC
- max. 2.28 A (< 5 ms) at 110 V AC
- max. 5.5 A (< 5 ms) at 260 V AC

Power supply failure

Lasting min. 1 power cycle:

- EEPROM or HistoROM/T-DAT saves measuring system data if power supply fails
- HistoROM/S-DAT: exchangeable data storage device which stores sensor characteristic data (nominal diameter, serial number, calibration factor, zero point etc.)

Potential equalization**Standard case**

Perfect measurement is only ensured when the medium and the sensor have the same electrical potential. Most Promag sensors have a reference electrode installed as standard, which guarantees the required potential equalization. This usually means that additional potential equalization measures are unnecessary.

Promag S:

- Reference electrode is standard for electrode materials 1.4435/316L, Alloy C-22, tantalum, titanium Gr. 2, Duplex 1.4462, tungsten carbide coating (for electrodes made of 1.4435)
- Reference electrode is optional for electrode material platinum
- Reference electrode not present in measuring tubes with a natural rubber lining in conjunction with brush electrodes

**Note!**

For installation in metal pipes, it is advisable to connect the ground terminal of the transmitter housing to the piping. Also, observe company-internal grounding guidelines.

Potential equalization by means of the transmitter's ground terminal

**Caution!**

- For sensors without reference electrodes or without metal process connections, carry out potential equalization as per the instructions for special cases described below. These special measures are particularly important when standard grounding practice cannot be ensured or extremely strong matching currents are expected.
- Sensors with brush electrodes do not have a reference electrode. For this reason, ground disks must be installed if necessary to ensure sufficient potential equalization to the fluid. This applies in particular to isolating lined pipes which are not grounded → 10.

Special cases

Metal, ungrounded piping

In order to prevent outside influences on measurement, it is necessary to use ground cables to connect each sensor flange to its corresponding pipe flange and ground the flanges. Connect the transmitter or sensor connection housing, as applicable, to ground potential by means of the ground terminal provided for the purpose (see diagram).

The ground cable for flange-to-flange connections can be ordered separately as an accessory from Endress+Hauser → 45.

- $DN \leq 300$ (12"): The ground cable is in direct connection with the conductive flange coating and is secured by the flange screws (A).
- $DN \geq 350$ (14"): The ground cable connects directly to the metal transport bracket (B).

Caution!

Also, observe company-internal grounding guidelines.

A0004376

*Potential equalization with equalizing currents in ungrounded, metal pipes
(ground cable: copper wire, at least 6 mm^2 / 10 AWG)*

- A Installing ground cable at $DN \leq 300$ (12")
 B Installing ground cable at $DN \geq 350$ (14")

Pre-installed ground cable for $DN \leq 300$ (12") (order option)

Ground cables which are preinstalled on the sensor flange, are also available. These ground cables can be mounted and connected electrically to the piping in different ways:

- Using a screw on the side of the pipe flange (a)
- Using the flange screws (b)
- Using a pipe clip installed around the pipe (c)

A0006117

*Possibilities for connecting and mounting pre-installed ground cables
(ground cable: copper wire at least 6 mm^2 / 10 AWG)*

Plastic pipes and isolating lined pipes

Normally, potential is matched using the reference electrodes in the measuring tube. However, in exceptional cases it is possible that, due to the grounding plan of a system, matching currents flow over the reference electrodes. This can lead to destruction of the sensor, e.g. through electro-chemical decomposition of the electrodes. In such cases, e.g. for fiberglass or PVC pipings, it is therefore **essential** that you use additional ground disks for potential equalization. This applies also to two-phase or two-component flow, where the fluid is not well mixed or its constituents are not mixable.

Caution!

- Risk of damage by electrochemical corrosion. Note the electrochemical insulation rating, if the ground disks and measuring electrodes are made of different materials.
- Also, observe company-internal grounding guidelines.

Potential equalization/ground disks in the case of plastic pipes or isolating lined pipes
(ground cable: copper wire at least 6 mm² / 10 AWG)

Plastic pipes and isolating lined pipes

In such cases, install the measuring instrument without potential in the piping:

- When installing the measuring device, make sure that there is an electrical connection between the two piping runs (copper wire, at least 6 mm² / 10 AWG).
- When using ground disks in plastic or isolating lined pipes, ensure that they are electrically connected with each other (copper wire at least 6 mm² / 10 AWG).
- Make sure that the mounting material used does not establish a conductive connection between the pipe and the measuring device and that the mounting material withstands the torques applied when the threaded fasteners are tightened during installation.
- Check the galvanic isolation using an insulation tester (protection against contact).
- Also comply with the regulations applicable to potential-free installation.

Note!

For the remote version, both the sensor and the transmitter must be installed so that they are potential-free.

Potential equalization and cathodic protection (connecting cable: copper wire at least 6 mm² / 10 AWG)

- 1 Isolation transformer power supply
- 2 Electrically insulated

Performance characteristics

Reference conditions

To DIN EN 29104 and VDI/VDE 2641:

- Fluid temperature: $+28\text{ °C} \pm 2\text{ K}$ ($+82\text{ °F} \pm 2\text{ K}$)
- Ambient temperature: $+22\text{ °C} \pm 2\text{ K}$ ($+72\text{ °F} \pm 2\text{ K}$)
- Warm-up time: 30 minutes

Installation:

- Inlet run $> 10 \times \text{DN}$
- Outlet run $> 5 \times \text{DN}$
- Sensor and transmitter grounded.
- Sensor centered relative to the pipe.

Maximum measured error

Pulse output:

- Standard: $\pm 0.2\%$ o.r. $\pm 2\text{ mm/s}$ ($\pm 0.2\%$ o.r. $\pm 0.08\text{ in/s}$)
- With brush electrodes (Option): $\pm 0.5\%$ o.r. $\pm 2\text{ mm/s}$ ($\pm 0.5\%$ o.r. $\pm 0.08\text{ in/s}$)
(o.r. = of reading)

Current output:

in addition typically $\pm 5\text{ }\mu\text{A}$

Note!

Supply-voltage fluctuations have no effect within the specified range.

Max. measured error in % of reading

Conductivity

- Max. measuring error not specified
- Without temperature compensation (cell constant is a factory setting)

Repeatability

Volume flow

- Standard: max. $\pm 0.1\%$ o.r. $\pm 0.5\text{ mm/s}$ ($\pm 0.1\%$ o.r. $\pm 0.02\text{ in/s}$)
- With brush electrodes (Option): max. $\pm 0.2\%$ o.r. $\pm 0.5\text{ mm/s}$ ($\pm 0.2\%$ o.r. $\pm 0.02\text{ in/s}$)
(o.r. = of reading)

Conductivity

- Max. $\pm 5\%$ o.r.
(o.r. = of reading)

Operating conditions: Installation

Installation instructions

Location

The accumulation of air or gas bubbles in the measuring tube could result in an increase in measuring errors.

Avoid the following locations:

- At the highest point of a pipeline. Risk of air accumulating.
- Directly upstream from a free pipe outlet in a vertical pipeline.

A0003202

Installing pumps

Do not install the sensor on the intake side of a pump. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the lining's resistance to partial vacuum → 21.

It might be necessary to install pulse dampers in systems incorporating reciprocating, diaphragm or peristaltic pumps. Information on the measuring system's resistance to vibration and shock → 19.

A0003203

Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration. The Empty Pipe Detection function offers additional protection by detecting empty or partially filled pipes.

Caution!

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

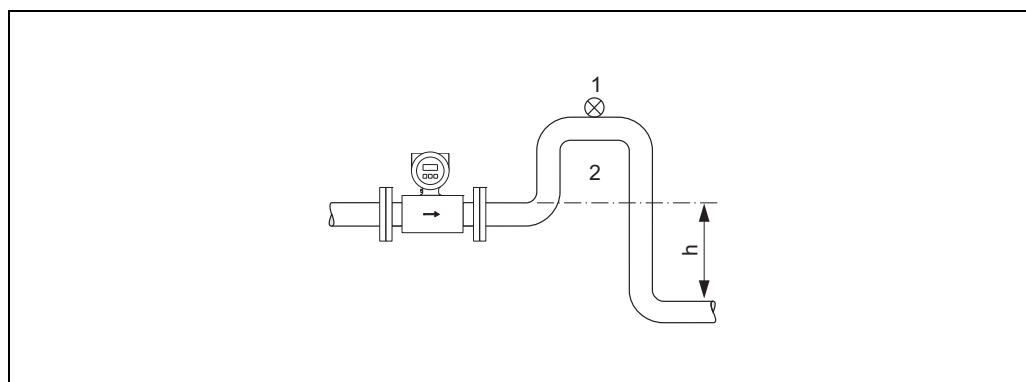

A0003204

Down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes $h \geq 5$ m (16,4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. This measure also prevents the system losing prime, which could cause air inclusions.

Information on the lining's resistance to partial vacuum → [21](#).

A0008157

Measures for installation in a down pipe

- 1 Vent valve
- 2 Siphon
- h Vertical height of the down pipe regarding the sensor

Orientation

An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube. Promag, nevertheless, supplies a range of functions and accessories for correct measuring of problematic fluids:

- Electrode Cleaning Circuit (ECC) for applications with fluids producing build-up, e.g. electrically conductive deposits → "Description of Device Functions" manual.
- Empty Pipe Detection (EPD) ensures the detection of partially filled measuring tubes, e.g. in the case of degassing fluids.

Vertical orientation

A vertical orientation is ideal in the following cases:

- For self-emptying piping systems and when using empty pipe detection.
- For sludge containing sand or stones and where the solids cause sedimentation.

A0008158

Horizontal orientation

The measuring electrode plane should be horizontal. This prevents brief insulation of the two electrodes by entrained air bubbles.

Caution!

Empty Pipe Detection functions correctly with the measuring device installed horizontally only when the transmitter housing is facing upward (see diagram). Otherwise there is no guarantee that Empty Pipe Detection will respond if the measuring tube is only partially filled or empty.

A0003207

1 EPD electrode for empty pipe detection (not available for "measuring electrode only" option)

2 Measuring electrodes for signal detection

3 Reference electrode for potential equalization (not available for "measuring electrode only" option)

Vibrations

Secure and fix both the piping and the sensor if the vibrations are severe.

Caution!

It is advisable to install sensor and transmitter separately if vibration is excessively severe. Information on the permitted resistance to vibration and shock → 19.

Measures to prevent vibration of the measuring device ($L > 10 \text{ m} / 33 \text{ ft}$)

Foundations, supports

If the nominal diameter is $\text{DN} \geq 350$ (14"), mount the sensor on a foundation of adequate load-bearing strength.

Caution!

Risk of damage.

Do not support the weight of the sensor on the metal casing; the casing would buckle and damage the internal magnetic coils.

Correct support for large nominal diameters ($\text{DN} \geq 350 / 14''$)

Adapters

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids. The nomogram shown here can be used to calculate the pressure loss caused by cross-section reduction.

Note!

The nomogram applies to fluids of viscosity similar to water.

1. Calculate the ratio of the diameters d/D .
2. From the nomogram, read off the pressure loss as a function of fluid velocity (*downstream* from the reduction) and the d/D ratio.

Pressure loss due to adapters (for pressure losses in US units, please contact Endress+Hauser)

Inlet and outlet runs

If possible, install the sensor well clear of fittings such as valves, T-pieces, elbows etc.

Compliance with the following requirements for the inlet and outlet runs is necessary in order to ensure measuring accuracy.

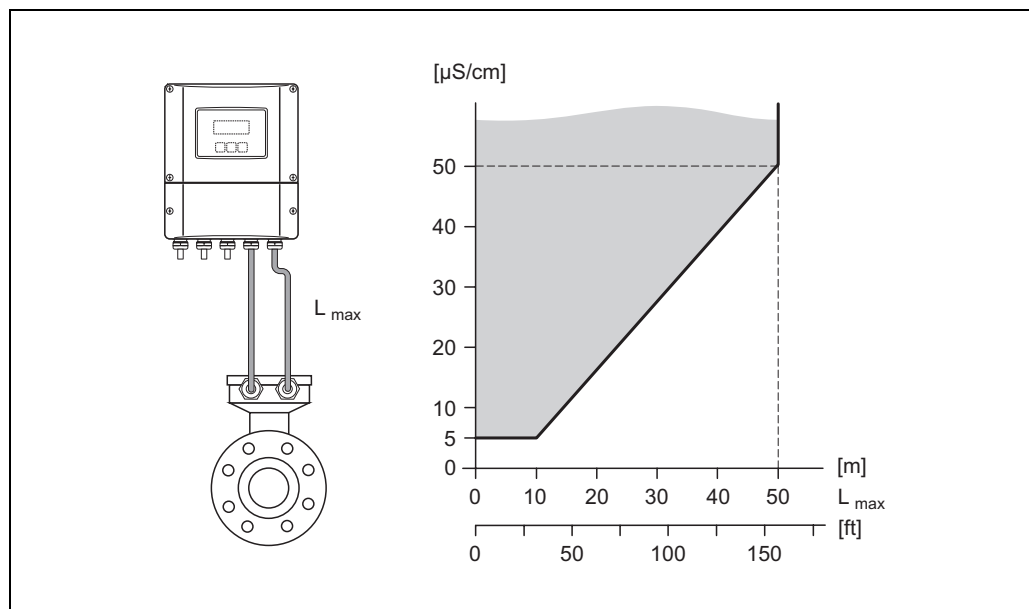

- Inlet run $\geq 5 \times DN$
- Outlet run $\geq 2 \times DN$

Length of connecting cable

In order to ensure measuring accuracy, comply with the following instructions when installing the remote version:

- Secure the cable run or route the cable in an armored conduit. Movement of the cable can falsify the measuring signal, particularly if the fluid conductivity is low.
- Route the cable well clear of electrical machines and switching elements.
- Ensure potential equalization between sensor and transmitter, if necessary.
- The permissible cable length L_{max} depends on the fluid conductivity (see Figure).

A0006110

Permitted lengths for connecting cable in remote version, as a function of the conductivity of the fluid

Gray shaded area = permissible area

L_{max} = Length of connecting cable

Operating conditions: Environment

Ambient temperature

Transmitter:

- Standard:
 - Compact version: -20 to $+50$ °C (-4 to $+122$ °F)
 - Remote version: -20 to $+60$ °C (-4 to $+140$ °F)
- Optional:
 - Compact version: -40 to $+50$ °C (-40 to $+122$ °F)
 - Remote version: -40 to $+60$ °C (-40 to $+140$ °F)

Note!

At ambient temperatures below -20 °C (-4 °F), the readability of the display may be impaired.

Sensor:

- Flange material carbon steel: -10 to $+60$ °C ($+14$ to $+140$ °F)
- Flange material stainless steel: -40 to $+60$ °C (-40 to $+140$ °F)

Caution!

Do not exceed the min. and max. temperatures for the lining of the measuring tube (→ "Medium temperature range").

Note the following points:

- Install the device at a shady location. Avoid direct sunlight, particularly in warm climatic regions.
- If both fluid and ambient temperatures are high, install the transmitter at a remote location from the sensor (→ "Medium temperature range").

Storage temperature

The storage temperature corresponds to the operating temperature range of the transmitter and sensor.

Degree of protection

- Standard: IP 67 (NEMA 4X) for transmitter and sensor
- Optional: IP 68 (NEMA 6P) for remote version of Promag S sensor

Shock and vibration resistance

Acceleration up to 2 g by analogy with IEC 600 68-2-6
(High temperature version: no data available)

Electromagnetic compatibility (EMC)

According to IEC/EN 61326 and NAMUR recommendation NE 21

Operating conditions: Process

Medium temperature range

The permitted temperature depends on the lining of the measuring tube:

- 0 to +60 °C (+32 to +140 °F) for natural rubber (DN 65 to 600 / 2½ to 24")
- 0 to +80 °C (+32 to +176 °F) for hard rubber (DN 65 to 600 / 2½ to 24")
- -20 to +50 °C (-4 to +122 °F) for polyurethane (DN 25 to 600 / 1 to 24")
- -20 to +180 °C (-4 to +356 °F) for PFA (DN 25 to 200 / 1 to 8"), restrictions → see diagrams
- -40 to +130 °C (-40 to +266 °F) for PTFE (DN 15 to 600 / ½ to 24"), restrictions → see diagrams

Promag S compact versions (with PFA or PTFE lining)

T_A Ambient temperature

T_F Fluid temperature

HT High temperature version with insulation

① Gray shaded area → temperature range from -10 to -40 °C (-14 to -40 °F) applies only to stainless steel flanges

Promag S remote versions (with PFA or PTFE lining)

T_A Ambient temperature

T_F Fluid temperature

HT High temperature version with insulation

① Gray shaded area → temperature range from -10 to -40 °C (-14 to -40 °F) applies only to stainless steel flanges

Conductivity

Minimum conductivity:

- $\geq 5 \mu\text{S/cm}$ for all liquids (incl. demineralized water)

Note!

In the remote version, the required minimum conductivity is also influenced by the length of the cable
→ 18.

Limiting medium pressure range (nominal pressure)

- EN 1092-1 (DIN 2501): PN 10 (DN 200 to 600 / 8 to 24"), PN 16 (DN 65 to 600 / 2½ to 24"), PN 25 (DN 200 to 600 / 8 to 24"), PN 40 (DN 15 to 150 / ½ to 6")
- ANSI B16.5: Class 150 (DN ½ to 24"), Class 300 (DN ½ to 6")
- JIS B2220: 10K (DN 50 to 300 / 2 to 12"), 20K (DN 15 to 300 / ½ to 12")
- AS 2129: Table E (DN 25 / 1", DN 50 / 2")
- AS 4087: Cl. 14 (DN 50 / 2")

Nominal diameter and flow rate

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 and 3 m/s (6 to 10 ft/s). The flow velocity (v), moreover, has to be matched to the physical properties of the fluid:

- $v < 2 \text{ m/s}$ ($< 6 \text{ ft/s}$): for abrasive fluids where solids do not cause sedimentation (e.g. lime milk)
- $v > 2 \text{ m/s}$ ($> 6 \text{ ft/s}$): for fluids producing build-up (e.g. wastewater sludge)
- $v > 2 \text{ m/s}$ ($> 6 \text{ ft/s}$): for abrasive sludge with a high sand or stone content and where the solids easily cause sedimentation (e.g. ore slurry)

Note!

Flow velocity can be increased, if necessary, by reducing the nominal diameter of the sensor through the use of adapters → 17.

Flow rate characteristic values - Promag S (SI units)				
Nominal diameter [mm]	Recommended flow rate min./max. full scale value ($v \approx 0.3$ or 10 m/s)	Factory settings		
		Full scale value ($v \approx 2.5 \text{ m/s}$)	Pulse value ($\approx 2 \text{ pulse/s}$)	Low flow cut off ($v \approx 0.04 \text{ m/s}$)

(Weight data valid for standard pressure ratings and without packaging material)

* Only DN 25 and DN 50 are available for flanges according to AS.

Materials

Transmitter housing:

- Compact and remote version: Powder-coated die-cast aluminum

Sensor housing:

- DN 15 to 300 (½ to 12"): Powder-coated die-cast aluminum
- DN 350 to 600 (14 to 24"): Painted steel

Measuring tube:

- DN < 350 (14"): Stainless steel 1.4301 (SS 304) or 1.4306/304L. For flanges of carbon steel with Al/Zn protective coating.
- DN > 300 (12"): Stainless steel 1.4301/304. For flanges of carbon steel with protective paint finish.

Flange:

- EN 1092-1 (DIN 2501): 316L / 1.4571 (SS 316Ti); RSt37-2 (S235JRG2) / C22 / FE 410W B (DN < 350 (14"): with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- ANSI: A105; F316L (DN < 350 (14") with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- JIS: RSt37-2 (S235JRG2) / HII / 1.0425 / 316L (DN < 350 (14") with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- AS 2129:
 - DN 25 (1"): A105 or RSt37-2 (S235JRG2), with Al/Zn protective coating
 - DN 50 (2"): A105 or St44-2 (S275JR), with Al/Zn protective coating
- AS 4087:
 - DN 50 (2"): A105 or St44-2 (S275JR), with Al/Zn protective coating

Ground disks: 1.4435/316L or Alloy C-22

Electrodes:

- 1.4435, platinum, Alloy C-22, tantalum, titanium Gr. 2, tungsten carbide coating (for electrodes made from 1.4435)
- 1.4310/302 (for brush electrodes), Duplex 1.4462, Alloy X750 (for brush electrodes)

Seals: according to DIN EN 1514-1

Material load diagrams

Caution!

The following diagrams contain material load curves (reference curves) for various process connections relating to the fluid temperature. But the maximal permissible fluid temperature always depends on the lining material of the sensor and/or the sealing material.

Flange connection to EN 1092-1 (DIN 2501)

Flange material: RSt37-2 (S235JRG2) / C22 / Fe 410W B

A0005594

Flange connection to EN 1092-1 (DIN 2501)

Flange material: 316L / 1.4571

A0005304

Flange connection to ANSI B16.5

Flange material: A105

A0003226

Flange connection to ANSI B16.5

Flange material: F316L

A0005307

Flange connection to JIS B2220

Flange material: RSt37-2 (S235JRG2) / H II / 1.0425

A0003228

Flange connection to AS 2129 Table E or AS 4087 Cl. 14

Flange material: A105 / RSt37-2 (S235JRG2) / St44-2 (S275JR)

A0005595

Fitted electrodes

Comes as standard:

- 2 measuring electrodes for signal detection
- 1 EPD electrode for empty pipe detection
- 1 Reference electrode for potential equalization

Optionally available for measuring electrodes made of platinum:

- 1 EPD electrode for empty pipe detection
- 1 Reference electrode for potential equalization

For measuring tube with natural rubber lining in combination with brush electrodes:

- 2 brush electrodes for signal detection

Process connections

Flange connection:

- EN 1092-1 (DIN 2501)
 - DN < 300 (12"): Form A
 - DN > 300 (12"): Form B
 - DN 65 (2½") PN 16 and DN 600 (24") PN 16 exclusively according to EN 1092-1
- ANSI
- JIS
- AS

Surface roughness

- Lining with PFA: $\leq 0.4 \mu\text{m}$ (16 μin)
- Electrodes: 0.3 to 0.5 μm (12 to 20 μin)

All data relate to wetted parts.

Human interface

Display elements

- Liquid-crystal display: illuminated, four lines with 16 characters per line
 - Custom configurations for presenting different measured values and status variables
 - 3 totalizers
 - At ambient temperatures below -20 °C (-4 °F), the readability of the display may be impaired.
-

Operating elements

- Onsite operation with three optical sensor keys (□/+/E)
 - Application-specific Quick Setup menus for straightforward commissioning
-

Language groups

Language groups available for operation in different countries:

- Western Europe and America (WEA):
English, German, Spanish, Italian, French, Dutch, Portuguese
- Eastern Europe/Scandinavia (EES):
English, Russian, Polish, Norwegian, Finnish, Swedish, Czech
- South and East Asia (SEA):
English, Japanese, Indonesian
- China (CN):
English, Chinese

Note!

You can change the language group via the operating program "FieldCare".

Certificates and approvals

CE mark	The measuring system described in these Operating Instructions therefore complies with the legal requirements of the EU Directives. Endress+Hauser confirms this by affixing the CE mark to it and by issuing the CE declaration of conformity.
C-tick mark	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex certification	Information on the currently available Ex-rated versions (ATEX, FM, CSA etc.) is available on request from your Endress+Hauser sales outlet. All information relevant to explosion protection is available in separate documents that you can order as necessary.
Sanitary compatibility	No applicable approvals or certification
Pressure measuring device approval	All measuring devices, including those with a nominal diameter smaller than or equal to DN 25, correspond to Article 3(3) of the EC Directive 97/23/EC (Pressure Equipment Directive) and have been designed and manufactured according to good engineering practice. For nominal diameters greater than DN 25 (depending on the fluid and process pressure), there are additional optional approvals according to category II/III.
FOUNDATION Fieldbus certification	<p>The flow device has successfully passed all the test procedures carried out and is certified and registered by the Fieldbus Foundation. The device thus meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> ■ Certified to FOUNDATION Fieldbus Specification ■ The device meets all the specifications of the FOUNDATION Fieldbus H1 ■ Interoperability Test Kit (ITK), revision status 5.0 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers ■ Physical Layer Conformance Test of the Fieldbus Foundation
PROFIBUS PA certification	<p>The flowmeter has successfully passed all the test procedures carried out and is certified and registered by the PNO (PROFIBUS User Organization). The device thus meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> ■ Certified in accordance with PROFIBUS Profile Version 3.0 (device certification number: available on request) ■ The measuring device can also be operated with certified devices of other manufacturers (interoperability)
Other standards, guidelines	<ul style="list-style-type: none"> ■ EN 60529 Degrees of protection by housing (IP code) ■ EN 61010-1 Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures ■ IEC/EN 61326 "Emission in accordance with requirements for class A". Electromagnetic compatibility (EMC requirements). ■ ANSI/ISA-S82.01 Safety Standard for Electrical and Electronic Test, Measuring, Controlling and related Equipment - General Requirements. Pollution degree 2, Installation Category II. ■ CAN/CSA-C22.2 (No. 1010.1-92) Safety requirements for Electrical Equipment for Measurement and Control and Laboratory Use. Pollution degree 2, Installation Category I. ■ NAMUR NE 21 Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment. ■ NAMUR NE 43 Standardization of the signal level for the breakdown information of digital transmitters with analog output signal. ■ NAMUR NE 53 Software of field devices and signal-processing devices with digital electronics.

Accessories

Various accessories are available for the transmitter and the sensor. These can be ordered separately from Endress+Hauser.

Note!

For detailed information on specific order codes, please contact the Endress+Hauser service organization.

Supplementary documentation

- Flow Measurement (FA005D/06/en)
- Operating Instructions Promag 55 (BA119D/06/en, BA120D/06/en)
- Operating Instructions Promag 55 PROFIBUS PA (BA124D/06/en, BA125D/06/en)
- Operating Instructions Promag 53 FOUNDATION Fieldbus (BA126D/06/en, BA127D/06/en)
- Supplementary documentation on Ex-ratings: ATEX, FM, CSA

Ordering information

Note!

Endress+Hauser reserves the right to change or modify product, specifications, and ordering information at any time without notice. Please consult Endress+Hauser or your local representative for the most recent information.
