Technical Information

Liquicap M  FMI51, FMI52

Capacitance level measurement
For continuous measurement in liquids

Application

The Liquicap M FMI5x compact transmitter is used for the continuous level measurement of liquids.

Thanks to its robust and tried-and-tested construction, the probe can be used both in vacuums and in overpressure up to 100 bar. The materials used allow operating temperatures in the medium container of –80 °C to +200 °C.

Used in conjunction with Fieldgate (remote measured value interrogation via the Internet), Liquicap M provides an ideal solution for inventoring materials and optimizing logistics (inventory control).

Your benefits

- No adjustment necessary for media with a conductivity of 100 µS/cm and higher. The probes are adjusted to the ordered probe length on leaving the factory (0 % to 100 %). This makes easy and fast commissioning possible.
- Menu-guided local configuration via plain text display (optional)
- Universal application thanks to wide range of certificates and approvals
- Use also in safety systems requiring functional safety to SIL2 in accordance with IEC 61508
- Corrosion-resistant, FDA-listed materials in contact with the process
- Can be switched for media forming buildup
- Short reaction times
- No need for readjustment after replacing electronics
- Automatic monitoring of electronics and possible damage to insulation, as well as rod breaking or rope tearing
- Suitable for interface measurement

Function and system design

Measuring principle
The principle of capacitance level measurement is based on the change in capacitance of the capacitor due to the change in the level. The probe and container wall (conductive material) form an electric capacitor. When the probe is in air $\Theta$, a certain low initial capacitance is measured. When the container is filled, the capacitance increases the more the probe is covered $\Phi$, $\Theta$. As of a conductivity of 100 $\mu$s/cm, the measurement is independent of the value for the dielectric constant (DK) of the liquid. As a result, fluctuations in the DK value do not affect the measured value display. Furthermore, the system also prevents the effect of medium buildup or condensate near the process connection for probes with an inactive length.

Note!
A ground tube is used as a counterelectrode for containers made of nonconductive materials.

Function
The selected electronic insert of the probe (e.g. FEI50H 4 to 20 mA HART) converts the measured change in capacitance of the liquid to a signal that is proportional to the level.

Phase-selective measurement
The evaluation of the container capacitance works along the principle of phase-selective measurement. In this process, the amount of alternating current and the phase shift between the voltage and current is measured. With these two characteristic quantities, the capacitance idle current can be calculated by the medium capacitor and the real current by the medium resistance. Conductive buildup stuck to the probe rod/rope acts like additional medium resistance and causes an error in measurement. As the size of the medium resistance can be determined with phase-selective measurement, the system compensates for the buildup on the probe.
**Interface measurement**

A prior adjustment also ensures a certain and definite measured value even if the emulsion layer is of varying thickness. In this process, the average value of the emulsion film is always measured. The adjustment values for empty and full adjustment can be calculated with the FieldCare operating program from Endress+Hauser.

1.) Water, for example (the medium must be conductive $\geq 100 \, \mu S/cm$)
2.) Emulsion
3.) Oil, for example (nonconductive medium $<1 \, \mu S/cm$)

**Measuring system**

The complete measuring system consists of:
- The capacitance Liquicap M FMI51 or FMI52 level probe
- The FEI57C electronic insert
- A transmitter power supply unit

**Note!**
- The twin-core feeder is also used for PFM signal transmission.
- In combination with a power supply unit the FEC57C will only run in a 1-channel-mode and without an automatic alignment correction.
4 to 20 mA output with HART protocol (FEI50H)

The complete measuring system consists of:

- The capacitance Liquicap M FM I51 or FMI52 level probe
- The FEI50H electronic insert
- A transmitter power supply unit (e.g. RN221N, RNS221, RMA421, RMA422)

Note!
DC voltage must be supplied to the electronic insert. The twin-core feeder is also used for HART protocol signal transmission.

Local operation

- Standard – via keys and switches on the electronic insert
- Optional – via display and operating module

Remote operation

- With HART handheld terminal DXR375/475
- With a personal computer, Commubox FXA191/195 and the operating program FieldCare.

Note!
FieldCare is a graphic operating program and is used to support commissioning, data backup, signal analysis and documentation of the measuring point.
Liquicap M  FMI51, FMI52

System integration via Fieldgate

Vendor managed inventory

The remote interrogation of tank or silo levels via Fieldgate enables suppliers of raw materials to gather information about the current inventories of their regular customers at any time and, for example, take this into account in their own production planning. The Fieldgate monitors the configured level limits and automatically triggers the next order as required. Here, the range of possibilities ranges from simple requisitioning by e-mail through to fully automatic order processing by incorporating XML data into the planning systems on both sides.

Remote maintenance of measuring systems

Not only does Fieldgate transmit the current measured values, it also alerts the standby personnel responsible by e-mail or SMS as required. Service technicians can diagnose and configure the connected HART devices remotely in the event of an alarm or also for routine checks. All that is required for this is the appropriate HART operating software (e.g. FieldCare) for the connected device. Fieldgate forwards the information transparently. In this way, all options of the operating software in question are available remotely. By using remote diagnosis and remote configuration some onsite service operations can be avoided and all others can at least be planned and prepared better.
Operating conditions: Installation

Installation instructions

Liquicap M FMI51 (rod probe) can be installed vertically from above or below. Liquicap M FMI52 (rope probe) can be installed vertically from above.

Note!
- The probe may not come into contact with the container wall! Do not install probes in the area of the filling curtain!
- When using in agitating tanks, make sure you install at a safe distance from the agitator.
- Rod probes with a ground tube should be used in the event of severe lateral load.
- When mounting, ensure there is a good electrically conductive connection between the process connection and the tank. Use an electrically conductive sealing band for example.

For containers that conduct electricity e.g. steel tanks

For containers that do not conduct electricity e.g. plastic tanks

Probe with ground tube and grounding
With separate housing

Note:
- The maximum connection length between the probe and the separate housing is 6 m (L4). The desired length must be quoted when ordering a Liquicap M with a separate housing.
- The overall length \( L = L1 + L4 \) may not exceed 10 m.
- If the connecting cable is to be shortened or passed through a wall, it must be separated from the process connection.

**Rod length** \( L1 \) max. 4 m

**Rope length** \( L1 \) max. 9.7 m (the maximum total length of \( L1 + L4 \) should not exceed 10 m).

**Extension heights**

**Wall holder unit**

Note!
- The wall holder unit is part of the scope of supply for device versions with a separate housing.
- The wall holder unit first has to be screwed to the separate housing before you can use it as a drilling template. The distance between the holes is reduced by screwing it to the separate housing.

**Operating conditions: Environment**

**Ambient temperature range**
- –50 to +70 °C
- –40 to +70 °C (with F16 housing)
- Observe restrictions (derating) → H 11
- If operating outdoors, use a protective cover! → H 33

**Storage temperature**
- –50 to +85 °C

**Climate class**
- DIN EN 60068-2-38/IEC 68-2-38: test Z/AD

**Vibration resistance**
- DIN EN 60068-2-64/IEC 68-2-64: 20 Hz– 2000 Hz; 0.01 g²/Hz

**Shock resistance**
- DIN EN 60068-2-27/IEC 68-2-27: 30g acceleration

**Cleaning**

**Housing:**
When cleaning, make sure that the cleaning agent used does not attack or corrode the housing surface or seals.

**Probe:**
Depending on the application, buildup (contamination and soiling) can form on the probe rod. A high degree of material buildup can affect the measurement result. If the medium tends to create a high degree of buildup, regular cleaning is recommended. When cleaning, it is important to make sure that the insulation of the probe rod is not damaged.

* as per EN60529  
** as per NEMA 250  
*** Only with M20 cable entry or G1/2 thread

### Electromagnetic compatibility (EMC)

- Interference emission to EN 61326, Electrical Equipment Class B
- Interference Immunity to EN 61326, Annex A (Industrial) and NAMUR Recommendation NE 21 (EMC)
- Error current in accordance with Namur NE43: FEI50H = 22mA
- A usual commercial instrument cable can be used.
Operating conditions: Process

**Process temperature range**

The following diagrams apply for:

- Rod and rope version
- Insulation: PTFE, PFA, FEP
- Standard applications outside hazardous areas

**Note!**
The temperature is restricted to $T_a \leq -40\, ^\circ C$ if the polyester housing F16 is used or if additional option B is selected (free from paint-wetting impairment substances, only FMI51).

**With compact housing**

![Diagram with compact housing](image1)

$T_a$: Ambient temperature

$T_p$: Process temperature

**With separate housing**

![Diagram with separate housing](image2)

$T_a$: Ambient temperature

$T_p$: Process temperature

*The permitted ambient temperature at the separate housing is the same as indicated for the compact housing.*
Process pressure limits

**Probe ø10 mm (including insulation)**
-1 to 25 bar (observe dependencies: process temperature and process connection → 11 and 17).

**Probe ø16 mm (including insulation)**
-1 to 100 bar (observe dependencies: process temperature and process connection → 11 and 17)
- In the event of an inactive length, the maximum permitted process pressure is 63 bar
- In the event of CRN approval and inactive length, the maximum permitted process pressure is 32 bar

**Probe ø22 mm (including insulation)**
-1 to 50 bar (observe dependencies: process temperature and process connection → 11 and 17).

Refer to the following standards for the pressure values permitted at higher temperatures:
- EN 1092-1: 2005 Table, Appendix G2
  With regard to its resistance/temperature property, the material 1.4435 is identical to 1.4404 which is grouped under 13E0 in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.
- ASME B 16.5a - 1998 Tab. 2-2.2 F316
- ASME B 16.5a - 1998 Tab. 2.3.8 N10276
- JIS B 2220

In each case it applies to the lowest value from the derating curves of the device and the selected flange.

### Pressure and temperature derating

For process connections ½", ¾", 1", flanges < DN50, < ANSI 2", < JIS 50A (10 mm rod)
For process connections ¾", 1", flanges < DN50, < ANSI 2", < JIS 50A (16 mm rod)
Rod insulation: PTFE, PFA
Rope insulation: FEP, PFA

Note!

* EHEDG, 3A: Certificate only applies for probes without an inactive length and with a fully insulated probe rod.
### Rod probes FMI51

**Note!**
- The active probe rod is always fully insulated (dimension L1).
- Total length of probe from sealing surface: \( L = L_1 + L_3 \)
- Thickness of insulation for probe rod diameter: 10 mm = 1 mm; 16 mm = 2 mm; 22 mm = 2 mm
- The insulation is welded at the tip of the probe. Measurement cannot be performed in this area.
- Probe rod diameter 10 mm: approx. 10 mm
- Probe rod diameter 16 and 22 mm: approx. 15 mm
- For conductive liquids (>100 \( \mu \text{S/cm} \)), the probe is adjusted at the factory to the probe length ordered (0 % to 100 %). For nonconductive liquids (<1 \( \mu \text{S/cm} \)), 0% adjustment is performed at the factory. The 100% adjustment has to be carried out on site.
- Length tolerances L1, L3: <1 m: 0 to –5 mm, 1 to 3 m: 0 to –10 mm, 3 to 6 m: 0 to –20 mm

**Liquicap M FMI51, FMI52**

**FMI52 rope probes**

**Note!**
- The active probe length is always fully insulated (dimension L1).
- Total length of probe from sealing surface: \( L = L_1 + L_3 \)
- All rope probes are prepared for tensioning in containers (tensioning weight / anchor hole).
- For conductive liquids (>100 \( \mu \)S/cm), the probe is adjusted at the factory to the probe length ordered (0 % to 100 %). For nonconductive liquids (<1 \( \mu \)S/cm), 0% adjustment is performed at the factory. Only the 100% adjustment must be carried out on site.
- Not suitable for agitator tanks, high-viscosity liquids and plastic tanks.
- Thickness of rope insulation 0.75 mm
- In the range of the anchor weight the measurement is not linear.
- Length tolerances \( L_1, L_3 \): <1 m: 0 to –10 mm, 1 to 3 m: 0 to –20 mm, 3 to 6 m: 0 to –30 mm, 6 to 12 m: 0 to –40 mm

* The Ø value of the inactive length depends on the process connection selected → \( \uparrow \) 33+

**Endress+Hauser**
Weight

Housing with process connection:
- F15, F16, F17, F13 approx. 4.0 kg
- T13 approx. 4.5 kg
- F27 approx. 5.5 kg

+ Flange weight
+ Probe rod Ø 10 mm: 0.5 kg/m,
+ Probe rod Ø 22 mm: 0.8 kg/m
+ Probe rod Ø 16 mm: 1.1 kg/m
+ Probe rope: 0.04 kg/m

Technical data: probe

Capacitance values of probe

- Basic capacitance: approx. 18 pF

Additional capacitance

- Mount the probe with a minimum distance of 50 mm from a conductive container wall:
  - Probe rod: approx. 1.3 pF/100 mm in air
  - Probe rope: approx. 1.0 pF/100 mm in air
- Fully insulated probe rod in water:
  - Approx. 38 pF/100 mm (16 mm rod)
  - Approx. 45 pF/100 mm (10 mm rod)
  - Approx. 50 pF/100 mm (22 mm rod)
- Insulated probe rope in water: approx. 19 pF/100 mm
- Rod probe with ground tube:
  - Insulated probe rod: in air approx. 6.4 pF/100 mm
  - Insulated probe rod: in water approx. 38 pF/100 mm (16 mm rod)
  - Insulated probe rod: in water approx. 45 pF/100 mm (10 mm rod)

Probe lengths for continuous measurement in conductive liquids

- Rod probe (range 0 to 2000 pF for ≤ 4000 mm)
- Rope probe <6 m (range 0 to 2000 pF)
- Rope probe >6 m (range 0 to 4000 pF)

Material

Material specifications as per AISI and DIN-EN.

In contact with the process

- Probe rod, ground tube, inactive length, tensioning weight for rope probe: 316L (1.4435)
- Probe rope: 316 (1.4401)
- Probe rod insulation
  - If PFA selected: PFA (FDA 21 CFR 177.1550)
  - If PTFE selected: PTFE and PFA (FDA 21 CFR 177.1550)
- Probe rope insulation
  - If FEP selected: FEP, PTFE and PFA (FDA 21 CFR 177.1550)
- Insulated probe rod in water: approx. 1.3 pF/100 mm
- Flat seal for process connection G ¼ or G ½: elastomer fiber, asbestos-free
- Sealing ring for process connection G ¾, G 1, G 1½: Elastomer fiber, asbestos-free, resistant to lubricants, solvents, steam, weak acids and alkalis; to 300 °C and to 100 bar

Not in contact with the process

- Ground terminals on housing (exterior): 304 (1.4301)
- Nameplate on housing (exterior): 304 (1.4301)
- Cable glands
  - Housing F13, F15, F16, F17, F27: polyamide (PA)
  - Housing T13: nickel-plated brass
- Polyester housing F16: PBT-FR with cover made of PBT-FR or with sight glass made of PA12,
  - Cover seal: EPDM
  - Adhesive nameplate: polyester foil (PET)
  - Pressure compensation filter: PBT-GF20
- Stainless steel housing F15: 316L (1.4404)
  - Cover seal: silicone
- Cover clamp: 304 (1.4301)
- Pressure compensation filter: PBT-GF20, PA
- Aluminum housing F17/F13/T13: EN-AC-AlSi10Mg, plastic-coated,
  - Cover seal: EPDM
  - Cover clamp: nickel-plated brass
  - Pressure compensation filter: silicone (not T13)
- Stainless steel housing F27: 316L (1.4435)
  - Cover seal: FVMQ (optional: EPDM seal available as spare part)
  - Cover clamp: 316L (1.4435)

</tbody>
</table>

**FEI57C (PFM)**

The transmitter superimposes current pulses (PFM signal 60 to 2800 Hz) with a pulse width of approx. 100 μs and a current strength of approx. 8 mA on the supply current (approx. 8 mA).

### Signal on alarm

**FEI50H**

Fault diagnosis can be called up as follows:
- Via the local display: Red LED
- Via the local display showing:
  - Error symbol
  - Plain text display
- Via the current output: 22 mA (in accordance with NE43)
- Via the digital interface (HART status error message)

**FEI57C**

Fault diagnosis can be called up as follows:
- Via the local display: Red LED
- Local display at switching unit

### Linearization

**FEI50H**

The Liquicap M linearization function enables conversion of the measured value into any desired length or volume units. Linearization tables for volume calculation of horizontal cylindrical tanks and spherical tanks are pre-programmed. Any other tables with up to 32 value pairs can be input manually or semi-automatically.

**FEI57C**

With FEI57C, linearization takes place in the switching units.

### Power supply

</tr>
</tbody>
</table>

#### Terminal assignment

**2-wire, 4 to 20 mA with HART**

The twin-core connecting cable is connected to the screw terminals (conductor cross-section 0.5 to 2.5 mm) in the connection compartment at the electronic insert. If the superimposed communication signal (HART) is used, a shielded cable must be used and the shielding connected at the sensor and power supply. Protective circuits against reverse polarity, HF-influences and overvoltage peaks are integrated (see TI241F "EMC test procedures").
Liquicap M  FMI51, FMI52

Supply voltage

All of the following voltages are terminal voltages directly at the device:

**FEI50H:**
- 12.0 to 36 VDC (in the non-hazardous area)
- 12.0 to 30 VDC (in hazardous areas EEx ia)
- 14.4 to 30 VDC (in hazardous areas EEx d)

**FEI57C:**
- 14.8 VDC from associated supply unit.

Note!
Both electronic inserts have integrated reverse polarity protection.

Cable entry

- Cable gland: M20x1.5 (for EEx d only cable entry)
  - Two cable glands are included in scope of delivery.
- Cable entry: G ½ or ½ NPT

Power consumption

**FEI50H**
- Min. 40 mW, max. 800 mW

**FEI57C**
- Max. 250 mW

Current consumption

**FEI50H (4 to 20 mA/HART)**
- Current consumption: 3.8 to 22 mA
- HART multidrop operation: 4 mA
- Residual ripple HART: 47 to 125 Hz; Uss = 200 mV (with 500 Ω)
- Noise HART (FEI50H): 500 Hz to 10 kHz; Ueff <2.2 mV (with 500 Ω)

**FEI57C**

![Diagram of 2-wire, PFM connection](image)

Frequency: 60 to 2800 Hz
Performance characteristics

Reference operating conditions
- Room temperature: +20 °C ±5 °C
- Span: ΔC = 25 to 4000 pF recommended (2 to 4000 pF possible)

Maximum measured error
- Non-repeatability (reproducibility) as per DIN 61298-2: max. ±0.1 %
- Non-linearity for limit point setting (linearity) as per DIN 61298-2: max. ±0.5 %

Influence of ambient temperature
Electronic insert
<0.06 % / 10 K related to the full scale value

Separate housing
Change in capacitance of connecting cable 0.015 pF/m per K

Influence of process pressure
In the case of fully insulated probes in conductive liquids: <10.0 % related to the full scale value

Switch-on behavior
FEI50H
14 s (stable measured value after switch-on procedure). Start-up in safe state (22 mA).
FEI57C
1.5 s (stable measured value after switch-on procedure). Start-up in safe state (22 mA).

Measured value reaction time
FEI50H
$t_1 \leq 0.3$ s
$t_1 \leq 0.5$ s for operating mode SIL

FEI57C
$t_1 = 0.3$ s

Note!
Observe integration time of switching unit

Integration time
FEI50H
$\tau = 1$ s (factory setting) 0 to 60 s can be set.
The integration time affects the speed at which the display and the current output react to changes in the level.

Accuracy of factory adjustment

<table>

- DIP switch, buildup (YES/NO)
- DIP switch, probe length (probe length > 6 m / ≤ 6 m)

**Local operation with display**
The optional display can be used to configure via 3 keys directly at the device. All device functions can be set via menu operation. The menu consists of function groups and functions. Application parameters can be read or set in the functions.

The menu guidance with integrated help texts ensures quick and safe commissioning.
For accessing the display, the cover of the electronics compartment can also be opened in hazardous areas (EEx ia).
Remote operation with handheld terminal

The handheld terminals FieldXpert SFX100 or Field Communicator DXR375/475 can be used to set all device functions via menu operation.
Remote operation via FieldCare Device Setup

FieldCare is a graphic operating program and is used to support commissioning, data backup, signal analysis and documentation of the devices. The following operating systems are supported: Windows 2000, Windows XP, Windows Vista and Windows 7.

FieldCare supports the following functions:
- Configuration of transmitters in online operation
- Tank linearization
- Loading and saving device data (upload/download)
- Documentation of the measuring point

Menu guided commissioning

Connection options
- HART with Commubox FXA195

Note!
The latest version of FieldCare is available at: www.de.endress.com → Search for: FieldCare.
## Certificates and approvals

**CE mark**
The devices are designed to meet state-of-the-art safety requirements, have been tested and left the factory in a condition in which they are safe to operate. The devices comply with the applicable standards and regulations that are listed in the EC Declaration of Conformity and thus meet the legal requirements of the EC Directives. Endress+Hauser confirms the conformity of the device by affixing to it the CE mark.

**Ex approval**
See "Ordering information" from → 33

**Additional approvals**
- See also "Ordering information: approval" → 33 ff.
- TSE Certificate of Suitability (FMI51)
  - The following applies to wetted device components:
    - They do not contain any materials derived from animals.
    - No additives or operating materials derived from animals are used in production or processing.

⚠️ **Note!**
The wetted device components are listed in the "Mechanical construction" (→ 15 ff) and "Ordering information" (→ 33 ff) sections.

- AD2000
  - The wetted material (316L) corresponds to AD2000 – W0/W2
Ordering information
Detailed ordering information is available from the following sources:
- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country
  → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

Note! Product Configurator – the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or
  operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Accessories

Protective cover
For F13, F17 and F27 housing (without display)
Order number: 71040497

For F16 housing
Order number: 71127760

Shortening kit for FMI52
Once the rope is shortened, the device loses its hygiene approval: EHEDG, 3A.
Order number: 942901-0001

Commubox FXA195 HART
For intrinsically safe HART communication with FieldCare via a USB port.

Overvoltage protection HAW56x
Surge arrester for limiting overvoltage in signal lines and components.

Overvoltage protection (installation on housing M20x1.5)
- HAW569-A11A (non-hazardous)
- HAW569-B11A (hazardous area)

Overvoltage protection (installation in cabinet)
- HAW562Z (hazardous area)

Weld-in adapter
All the weld-in adapters available are described in the document TI426F.
www.endress.com => Country => Download => Advanced => Documentation code => TI426F.
Spare parts

Information on the spare parts that are available for your measuring device is provided at "www.endress.com". To retrieve the information, process as follows:

1. Select "www.endress.com" and then select the country.
2. Click "Instruments".

![Endress+Hauser product search](image)

3. Enter the product name in the "Product name" field.

4. Select the device.
5. Switch to the "Accessories/spare parts" tab

![Spare parts](image)

6. Select the spare parts (also use the overview drawings on the right-hand side of the screen).

When ordering a spare part, always quote the serial number that is indicated on the nameplate. Where necessary, replacement instructions are provided with the spare parts.

Documentation

Note!
