Technical Information

Cleanfit CPA871

Flexible retractable process assembly for water, wastewater, chemical industry and heavy industry

Application

Cleanfit CPA871 is a flexible process retractable assembly for applications with standard 12 mm sensors for pH and redox. The assembly was developed to guarantee maximum safety in:

- Water and wastewater including sea water
- Chemical industry
- Oil and gas
- Electricity and energy
- Hazardous areas
- Primaries and metals

Your benefits

- Maximum operational safety: Intelligent functions ensure that the assembly is not inserted into the process without the sensor or unintentionally retracted from the process if the assembly is in measuring position.
- Suitable for demanding applications: The optional immersion chamber eliminates problems associated with media that form buildup.
- Robust assembly design: The metallic support housing ensures that the service chamber is mechanically stable.
- Flexible in adapting to your process: A wide range of process connections and materials in contact with the medium; for corrosive media and hazardous areas also.
Function and system design

**Mode of operation**

With the Cleanfit CPA871 retractable assembly, you can carry out pH, ORP and other measurements reliably using suitable sensors. You can remove, clean, sterilize or calibrate/adjust the sensors without interrupting the process.

The assembly can be installed in both vessels and pipes.

**Design**

The retractable assembly has a modular design and can therefore be flexibly adapted to a wide array of applications. It is available with both a manual and a pneumatic drive.

A choice of two chamber systems is available for the assembly:
- Standard version or
- Immersion chamber version

It is possible to choose between the following strokes for the electrode guide:
- 36 mm for standard version and immersion chamber version
- 78 mm for standard version

All common process connections are available:
- Clamp/flange EN1092-1/flange ASME B16.5/flange JIS B2220/dairy fitting/thread

**Safety function**

**Locking mechanism without sensor**
If the sensor is not installed, it is not possible to pneumatically or manually move the assembly from the service position to the measuring position.

**Manual or pneumatic drive**
The sensor can be driven both manually and pneumatically. The manual drive has a self-retaining thread to hold the sensor in any intermediate position. The manual drive can be used for process pressures up to 8 bar (116 psi). The pneumatic drive can be used for process pressures up to 16 bar (232 psi).

**Limit position locking if compressed air fails**
If the compressed air fails in pneumatic assemblies, the assembly remains in the position previously selected. The process pressure cannot force it out of the measuring position and into an intermediate position.

**Limit position locking with manual drive**
For position locking, the manual version has an unlocking button in both the measuring position and the service position.

**Impossible to remove sensor in the measuring position**
The protection cap for covering the sensor has the following functions:
- Mechanical sensor safety
- Prevents sensor removal in the assembly measuring position
The bottom part of the protection cap is partly inserted into the drive and cannot be opened as a result.

**Non-rotating sensor guide**
During insertion/retraction, the position of the ridges of the immersion tube in the area of the sensor head retains the pre-setting once selected. This guarantees optimum and clear positioning of the sensor in the process and during cleaning.

**Limit position detection (can be retrofitted)**
In the case of assemblies with a pneumatic drive, the service and measuring position of the sensor are detected inductively and reported to connected systems (only for the measuring position in the case of the manual drive assembly).
Elements

The assembly is available with a manual or pneumatic drive.

1. Assembly with manual drive (without protective cap)
   1. Rinse connection
   2. Connection for limit position switch
   3. Manual drive (fulcrum shaft)
   4. Fastening ring for protective cap
   5. Unlocking button (measuring position)
   6. Rinse connection
   7. Unlocking button (service position)

2. Assembly with pneumatic drive (without protective cap)
   1. Rinse connection
   2. Automatic limit position lock, process
   3. Connection for limit position switch
   4. Automatic limit position lock, service
   5. Fastening ring for protective cap
   6. Pneumatic connection (move to measuring position)
   7. Pneumatic connection (move to service position)
   8. Rinse connection

Measuring system

3. Measuring system (example)
   1. Cleanfit assembly CPA871
   2. Measuring cable
   3. Liquiline CM44x transmitter
   4. Sensor
**Immersion chamber**

The special immersion chamber version is the perfect solution when the sensor descends to greater immersion depths in media that cause buildup and media with a tendency to form condensation. In the process medium, the sensor guide containing the installed sensor is almost completely surrounded by the service chamber. This means that there is minimal contact with the medium. The seals are thus protected from damage when the sensor is moving from measuring to service position.

**Assignment of rinse connections**

In the standard version, the inlet and outlet of the service chamber can be assigned as desired. In the immersion chamber version, the inlet and outlet of the service chamber are fixed. The outlet of the service chamber is located under the leakage borehole. The leakage hole is sealed with an M5 screw.

![Connection of service chamber in the immersion chamber version](image)

1. **Service chamber**
2. **Service chamber inlet**
3. **Leakage hole**
4. **Service chamber outlet**
Service chamber

In measuring position, the service chamber is separated from the process by the process seals and sensor guide. No process medium can get into the service chamber.

When the assembly is moving from measuring to service position (or the other way around), the service chamber is no longer separated from the process. Now process medium can get into the service chamber.

To prevent this, you can rinse the service chamber with a sealing medium via the service chamber inlet. This also means that process medium, which may contain solid particles, does not need to be removed via the service chamber.

In service position, the service chamber is separated from the process.
Cleanfit Control

Integration in an automatic measuring system

Cleanfit Control converts electrical signals into pneumatic signals. Signals coming from the relays or outputs of the transmitter are used to control pneumatically-operated retractable assemblies or pumps. Pilot valves are used for this purpose.

Cleanfit Control allows automatic cleaning of sensors installed in retractable assemblies. This means that sensor performance can be maintained at a high level without any interruption to the process.

It is the function of the Cleanfit Control CYC25 to integrate the actuators into the cleaning program in a safety-oriented manner. That is why the actuators, i.e. assembly, valves and pumps, are not connected directly via the relays to the Liquiline CM44x. Instead they are connected to the Cleanfit Control CYC25. The 24V DC power supply to these actuators, as well as the compressed air supply, are provided by the customer.

Control unit Air-Trol 500

Air-Trol 500 allows you to move all pneumatically-controlled retractable assemblies manually.

- Easy installation
- Purely pneumatic functional unit
- Measuring or service mode of assembly:
  - Simple toggle switch
  - Optical display
- Push-button switch for pneumatic valve for cleaning agent, used to clean sensor

Air-Trol 500 is available as accessory.
Installation

Orientation

The assembly is designed for installation on tanks and pipes. Suitable process connections must be available for this.

**NOTICE**

**Frost damage to the assembly**

- If used outdoors, ensure that water cannot penetrate the drive.

The assembly is designed in such a way that there are no restrictions with regard to the orientation.

The sensor that is used can restrict the orientation.

Pneumatic connections for automatic operation

Prerequisites:

- Air pressure 4 to 7 bar (58 to 102 psi)
- Compressed air quality in accordance with ISO 8573-1:2001
  
  Quality class 3.3.3 or 3.4.3
- Solids class 3 (max. 5 μm, max. 5 mg/m³, contamination with particles)
- Water content for temperatures ≥ 15 °C: class 4 pressure condensation point 3 °C or lower
- Water content for temperatures of 5 to 15 °C: class 3 pressure condensation point -20 °C or lower
- Oil content class 3 (max. 1 mg/m³)
- Air temperature: 5 °C or higher
- No continuous air consumption
- Minimum nominal diameter of air pipes: 2 mm (0.08 “)

Connection: Push-in fitting M5, hose 4/2 mm OD/ID (adapter for 6/4 mm OD/ID enclosed)

Damage to seals due to excessive air pressure!

If the air pressure can increase to more than 7 bar (102 psi) (even short pressure surges), a pressure-reducing valve must be installed upstream.

Rinse connection

The service chamber connections of the CPA871 retractable assembly make it possible to clean the chamber and the sensor with water or a cleaning solution at a pressure of 6 bar (87 psi) max.

Seals can be damaged if the water pressure is too high.

Install an pressure-reducing valve upstream if there is a possibility that the water pressure will increase to more than 6 bar (87 psi) (including any short pressure surges).

Environment

Ambient temperature range

-10 to +70 °C (+10 to +160 °F)

Storage temperature

-10 to +70 °C (+10 to +160 °F)
**Process**

**Process temperature**
-10 to +140 °C (14 to 284 °F) for all materials except PVDF and conductive PVDF
-10 to +100 / 90 °C (14 to 212 / 194 °F) for PVDF and conductive PVDF materials

**Process pressure for pneumatic drive**
Materials: 1.4404, Alloy C22, PEEK
Basic and immersion chamber version: 16 bar (232 psi) up to 140 °C (284 °F)
Materials: PVDF, conductive PVDF
Basic version: 16 bar (232 psi) up to 100 °C (212 °F)
Immersion chamber version: 4 bar (58 psi) to 90 °C (194 °F)

⚠️ The service life of the seals is reduced if process temperatures are constantly high or if SIP is used. The other process conditions may also reduce the service life of the seals.

**Process pressure for manual drive**
Materials: 1.4404, Alloy C22, PEEK
Basic and immersion chamber version: 8 bar (116 psi) up to 140 °C (284 °F)
Materials: PVDF, conductive PVDF
Basic version: 8 bar (116 psi) up to 100 °C (212 °F)
Immersion chamber version: 4 bar (58 psi) to 90 °C (194 °F)

⚠️ The service life of the seals is reduced if process temperatures are constantly high or if SIP is used. The other process conditions may also reduce the service life of the seals.

Limit position switches

With limit position detection, you can notify a system located downstream (transmitter, switching amplifier, output interface terminal) whether the assembly is in the measurement or service position (in the case of a manual drive, only the measurement position is queried).

The assembly can be ordered directly with limit position detection, or it can be retrofitted at a later stage.

Switching element function: NAMUR NC contact (inductive)
Switching distance: 1.5 mm (0.06 “)
Nominal voltage: 8 V
Switching frequency: 0 to 5000 Hz
Housing material: Stainless steel

Certificates and approvals

**RL 94/9/EC (ATEX)**
The assembly does not fall within the scope of the directive. However, if conditions for safe use are adhered to, it may be deployed in the hazardous area.

**CE/PED**
The CPA871 assembly has been manufactured according to good engineering practice in accordance with Article 3, Paragraph 3 of the Pressure Equipment Directive 97/23/EC and therefore is not required to bear the CE label.
### Ordering information

**Ordering instructions**

Create the order code for the assembly as follows:

1. Is the assembly used in the hazardous or non-hazardous area?
2. Select the drive type and the limit position switches.
3. Select the type of service chamber.
4. What material should the wetted seals be made of?
5. What material should the wetted surfaces be made of?
6. Select the suitable process connection.
7. Which connections should the service chamber have?

Order the accessories as follows:
- If you wish to order the accessories together with the assembly, then use the accessory code of the product structure.
- If you only wish to order accessories, then use the order numbers from the 'Accessories' section.

**Product page**

www.endress.com/cpa871

**Product Configurator**

The navigation area is located on the right of the product page.

1. Under 'Device support' click 'Configure your selected product'.
   - The Configurator opens in a separate window.
2. Select all the options to configure the device in line with your requirements.
   - In this way, you receive a valid and complete order code for the device.
3. Export the order code as a PDF or Excel file. To do so, click the appropriate button at the top of the screen.

**Scope of delivery**

The scope of delivery comprises:
- Assembly in the version ordered
- Operating Instructions
Accessories

The following are the most important accessories available at the time this documentation was issued. For accessories not listed here, please contact your service or sales office.

The following accessories can be ordered via the product structure (see ordering information):
- Weld-in adapter G1¼, straight, 35 mm, 1.4435 (AISI 316 L), safety nozzle
- Weld-in adapter G1¼, angled, 35 mm, 1.4435 (AISI 316 L), safety nozzle

Water filter and pressure reducer
- Filter set CPC310, CVC400
  - Water filter (dirt trap) 100 µm, complete, incl. angle bracket
  - Order No. 71031661
- Pressure reducer kit
  - Complete, incl. manometer and angle bracket
  - Order No. 51505755

Hose nozzle
- Hose connection set G¼, DN 12
  - 1.4404 (AISI 316L) 2 x
  - Order No. 51502808
- Hose connection set G¼, DN 12
  - PVDF (2 x)
  - Order No. 50090491

Flow vessels
- Flow vessel in different materials
  - Coupling: 2 x G¼ internal thread
  - Material: stainless steel 1.4404 (AISI 316 L), order no. TSP 71268971
  - Material: PVDF, order no. TSP 71268972
  - Material: PEEK, order no. TSP 71268973
Flow vessel made of stainless steel
- Flange DN25 PN16
- Material: stainless steel 1.4404 (AISI 316 L)
- Order no. TSP 71276097

Cleaning systems
Air-Trol 500
- Control unit for Cleanfit retractable assemblies
- Order No. 50051994
- Technical Information TI00038C/07/EN
**Cleanfit Control CYC25**
- Converts electrical signals into pneumatic signals to control pneumatically-operated retractable assemblies or pumps in conjunction with Liquiline CM44x
- Wide range of control options
- Technical Information TI01231C

**Sensors**

**pH sensors**

**Orbisint CPS11D / CPS11**
- pH electrode for process technology
- Optional SIL version for connecting to SIL transmitter
- With dirt-repellent PTFE diaphragm
- Technical Information TI00028C

**Memosens CPS31D**
- pH electrode with gel-filled reference system with ceramic diaphragm
- Product Configurator on the product page: [www.endress.com/cps31d](http://www.endress.com/cps31d)
- Technical Information TI00030C

**Ceraliquid CPS41D / CPS41**
- pH electrode with ceramic junction and KCl liquid electrolyte
- Product Configurator on the product page: [www.endress.com/cps41d](http://www.endress.com/cps41d) or [www.endress.com/cps41](http://www.endress.com/cps41)
- Technical Information TI00079C

**Ceragel CPS71D / CPS71**
- pH electrode with double-chamber reference system and integrated bridge electrolyte
- Product Configurator on the product page: [www.endress.com/cps71d](http://www.endress.com/cps71d) or [www.endress.com/cps71](http://www.endress.com/cps71)
- Technical Information TI00245C

**Orbipore CPS91D / CPS91**
- pH electrode with open aperture for media with high dirt load
- Product Configurator on the product page: [www.endress.com/cps91d](http://www.endress.com/cps91d) or [www.endress.com/cps91](http://www.endress.com/cps91)
- Technical Information TI00375C

**ORP sensors**

**Orbisint CPS12D / CPS12**
- ORP sensor for process technology
- Product Configurator on the product page: [www.endress.com/cps12d](http://www.endress.com/cps12d) or [www.endress.com/cps12](http://www.endress.com/cps12)
- Technical Information TI00367C

**Ceraliquid CPS42D / CPS42**
- ORP electrode with ceramic junction and KCl liquid electrolyte
- Product Configurator on the product page: [www.endress.com/cps42d](http://www.endress.com/cps42d) or [www.endress.com/cps42](http://www.endress.com/cps42)
- Technical Information TI00373C

**Ceragel CPS72D / CPS72**
- ORP electrode with double-chamber reference system and integrated bridge electrolyte
- Product Configurator on the product page: [www.endress.com/cps72d](http://www.endress.com/cps72d) or [www.endress.com/cps72](http://www.endress.com/cps72)
- Technical Information TI00374C
**pH ISFET sensors**

**Tophit CPS441D / CPS441**
- Sterilizable ISFET sensor for low-conductivity media
- Liquid KCl electrolyte
- Product Configurator on the product page: [www.endress.com/cps441d](http://www.endress.com/cps441d) or [www.endress.com/cps441](http://www.endress.com/cps441)

Technical Information TI00352C

**Tophit CPS471D / CPS471**
- Sterilizable and autoclavable ISFET sensor for food and pharmaceutics, process engineering
- Water treatment and biotechnology

Technical Information TI00283C

**Tophit CPS491D / CPS491**
- ISFET sensor with open aperture for media with high dirt load
- Product Configurator on the product page: [www.endress.com/cps491d](http://www.endress.com/cps491d) or [www.endress.com/cps491](http://www.endress.com/cps491)

Technical Information TI00377C

**pH and ORP combined sensors**

**Memosens CPS16D**
- Combined pH/ORP sensor for process technology
- With dirt-repellent PTFE diaphragm
- With Memosens technology
- Product Configurator on the product page: [www.endress.com/cps16D](http://www.endress.com/cps16D)

Technical Information TI00503C

**Memosens CPS76D**
- Combined pH/ORP sensor for process technology
- Hygienic and sterile applications
- With Memosens technology
- Product Configurator on the product page: [www.endress.com/cps76d](http://www.endress.com/cps76d)

Technical Information TI00506C

**Memosens CPS96D**
- Combined pH/ORP sensor for chemical processes
- With poison-resistant reference with ion trap
- With Memosens technology
- Product Configurator on the product page: [www.endress.com/cps96d](http://www.endress.com/cps96d)

Technical Information TI00507C

**Conductivity sensor**

**Memosens CLS82D**
- Four-electrode sensor
- With Memosens technology
- Product Configurator on the product page: [www.endress.com/cls82d](http://www.endress.com/cls82d)

Technical Information TI01188C

**Oxygen sensor**

**Oxymax COS22D / COS22**
- Sterilizable sensor for dissolved oxygen
- With Memosens technology or as an analog sensor
- Product Configurator on the product page: [www.endress.com/cos22d](http://www.endress.com/cos22d) or [www.endress.com/cos22](http://www.endress.com/cos22)

Technical Information TI00446C
