Endress+Hauser

People for Process Automation
- Make sure the document is stored in a safe place such that it is always available when working on or with the device.
- To avoid danger to individuals or the facility, read the "Basic safety instructions" section carefully, as well as all other safety instructions in the document that are specific to working procedures.
- The manufacturer reserves the right to modify technical data without prior notice. Your Endress+Hauser Sales Center will supply you with current information and updates to these instructions.

Table of contents

1   About this document

1.1   Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2   Symbols

1.2.1   Safety symbols

⚠ DANGER
This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

⚠ WARNING
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

⚠ CAUTION
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE
This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2   Electrical symbols

Symbol	Meaning
⎓	Direct current
∼	Alternating current
⏦	Direct current and alternating current
⏚	**Ground connection** A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
⏚	**Protective Earth (PE)** A terminal which must be connected to ground prior to establishing any other connections. The ground terminals are situated inside and outside the device: • Inner ground terminal: Connects the protectiv earth to the mains supply. • Outer ground terminal: Connects the device to the plant grounding system.

1.2.3   Communication symbols
Symbol	Meaning
📶	**Wireless Local Area Network (WLAN)** Communication via a wireless, local network.
◉	**LED** Light emitting diode is off.

Symbol	Meaning
☼	**LED** Light emitting diode is on.
☼	**LED** Light emitting diode is flashing.
1.2.4 Tool symbols

Symbol	Meaning
✪	Torx screwdriver
✚	Phillips head screwdriver
✎	Open-ended wrench

1.2.5 Symbols for certain types of information

Symbol	Meaning
✔	**Permitted** Procedures, processes or actions that are permitted.
✔✔	**Preferred** Procedures, processes or actions that are preferred.
✘	**Forbidden** Procedures, processes or actions that are forbidden.
🛈	**Tip** Indicates additional information.
📖	Reference to documentation.
📄	Reference to page.
🖼	Reference to graphic.
▶	Notice or individual step to be observed.
1., 2., 3....	Series of steps.
↳	Result of a step.
?	Help in the event of a problem.
👁	Visual inspection.

1.2.6 Symbols in graphics

Symbol	Meaning
1, 2, 3, ...	Item numbers
1., 2., 3., ...	Series of steps
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections
⚠EX	Hazardous area

Symbol	Meaning
⧄	Safe area (non-hazardous area)
≋➡	Flow direction

1.3   Documentation

ℹ️ For an overview of the scope of the associated Technical Documentation, refer to the following:
  - *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from nameplate
  - *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate

ℹ️ Detailed list of the individual documents along with the documentation code → 🗎 212

1.3.1   Standard documentation

Document type	Purpose and content of the document
Technical Information	**Planning aid for your device** The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.
Sensor Brief Operating Instructions	**Guides you quickly to the 1st measured value - Part 1** The Sensor Brief Operating Instructions are aimed at specialists with responsibility for installing the measuring device. • Incoming acceptance and product identification • Storage and transport • Installation
Transmitter Brief Operating Instructions	**Guides you quickly to the 1st measured value - Part 2** The Transmitter Brief Operating Instructions are aimed at specialists with responsibility for commissioning, configuring and parameterizing the measuring device (until the first measured value). • Product description • Installation • Electrical connection • Operation options • System integration • Commissioning • Diagnostic information
Description of Device Parameters	**Reference for your parameters** The document provides a detailed explanation of each individual parameter in the Expert operating menu. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.2   Supplementary device-dependent documentation

Additional documents are supplied depending on the device version ordered: Always comply strictly with the instructions in the supplementary documentation. The supplementary documentation is an integral part of the device documentation.

1.4   Registered trademarks

HART®
Registered trademark of the FieldComm Group, Austin, Texas, USA

TRI-CLAMP®
Registered trademark of Ladish & Co., Inc., Kenosha, USA

2 Safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:
- ▸ Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ▸ Are authorized by the plant owner/operator.
- ▸ Are familiar with federal/national regulations.
- ▸ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▸ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:
- ▸ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- ▸ Follow the instructions in this manual.

2.2 Designated use

Application and media
The measuring device described in this manual is intended only for the flow measurement of liquids and gases.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:
- ▸ Keep within the specified pressure and temperature range.
- ▸ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- ▸ Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area (e.g. explosion protection, pressure vessel safety).
- ▸ Use the measuring device only for media to which the process-wetted materials are sufficiently resistant.
- ▸ If the ambient temperature of the measuring device is outside the atmospheric temperature, it is absolutely essential to comply with the relevant basic conditions as specified in the device documentation→ 🕮 8.
- ▸ Protect the measuring device permanently against corrosion from environmental influences.

Incorrect use
Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

⚠ WARNING

Danger of breakage due to corrosive or abrasive fluids and ambient conditions!
- ▸ Verify the compatibility of the process fluid with the sensor material.
- ▸ Ensure the resistance of all fluid-wetted materials in the process.
- ▸ Keep within the specified pressure and temperature range.

NOTICE

Verification for borderline cases:
▶ For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

Residual risks

⚠ **WARNING**

The electronics and the medium may cause the surfaces to heat up. This presents a burn hazard!
▶ For elevated fluid temperatures, ensure protection against contact to prevent burns.

⚠ **WARNING**

Danger of housing breaking due to measuring tube breakage!
If a measuring tube ruptures, the pressure inside the sensor housing will rise according to the operating process pressure.
▶ Use a rupture disk.

⚠ **WARNING**

Danger from medium escaping!
For device versions with a rupture disk: medium escaping under pressure can cause injury or material damage.
▶ Take precautions to prevent injury and material damage if the rupture disk is actuated.

2.3   Workplace safety

For work on and with the device:
▶ Wear the required personal protective equipment according to federal/national regulations.

For welding work on the piping:
▶ Do not ground the welding unit via the measuring device.

If working on and with the device with wet hands:
▶ Due to the increased risk of electric shock, gloves must be worn.

2.4   Operational safety

Risk of injury.
▶ Operate the device in proper technical condition and fail-safe condition only.
▶ The operator is responsible for interference-free operation of the device.

Conversions to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers.
▶ If, despite this, modifications are required, consult with Endress+Hauser.

Repair

To ensure continued operational safety and reliability,
▶ Carry out repairs on the device only if they are expressly permitted.
▶ Observe federal/national regulations pertaining to repair of an electrical device.
▶ Use original spare parts and accessories from Endress+Hauser only.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.
2.6 IT security

Our warranty is valid only if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the device and associated data transfer, must be implemented by the operators themselves in line with their security standards.

2.7 Device-specific IT security

The device offers a range of specific functions to support protective measures on the operator's side. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. An overview of the most important functions is provided in the following section.

Function/interface	Factory setting	Recommendation
Write protection via hardware write protection switch → 🖹 12	Not enabled.	On an individual basis following risk assessment.
Access code (also applies for Web server login or FieldCare connection) → 🖹 13	Not enabled (0000).	Assign a customized access code during commissioning.
WLAN (order option in display module)	Enabled.	On an individual basis following risk assessment.
WLAN security mode	Enabled (WPA2-PSK)	Do not change.
WLAN passphrase (password) → 🖹 13	Serial number	Assign an individual WLAN passphrase during commissioning.
WLAN mode	Access Point	On an individual basis following risk assessment.
Web server → 🖹 13	Enabled.	On an individual basis following risk assessment.
CDI-RJ45 service interface → 🖹 14	–	On an individual basis following risk assessment.

2.7.1 Protecting access via hardware write protection

Write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare) can be disabled via a write protection switch (DIP switch on the motherboard). When hardware write protection is enabled, only read access to the parameters is possible.

Hardware write protection is disabled when the device is delivered → 🖹 139.

2.7.2   Protecting access via a password

Different passwords are available to protect write access to the device parameters or access to the device via the WLAN interface.

- User-specific access code
  Protect write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare). Access authorization is clearly regulated through the use of a user-specific access code.
- WLAN passphrase
  The network key protects a connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface which can be ordered as an option.
- Infrastructure mode
  When the device is operated in infrastructure mode, the WLAN passphrase corresponds to the WLAN passphrase configured on the operator side.

User-specific access code

Write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare) can be protected by the modifiable, user-specific access code (→ 🖺 137).

When the device is delivered, the device does not have an access code and is equivalent to *0000* (open).

WLAN passphrase: Operation as WLAN access point

A connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface (→ 🖺 82), which can be ordered as an optional extra, is protected by the network key. The WLAN authentication of the network key complies with the IEEE 802.11 standard.

When the device is delivered, the network key is pre-defined depending on the device. It can be changed via the **WLAN settings** submenu in the **WLAN passphrase** parameter (→ 🖺 131).

Infrastructure mode

A connection between the device and WLAN access point is protected by means of an SSID and passphrase on the system side. Please contact the relevant system administrator for access.

General notes on the use of passwords

- The access code and network key supplied with the device should be changed during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code or network key.
- The user is responsible for the management and careful handling of the access code and network key.
- For information on configuring the access code or on what to do if you lose the password, see the "Write protection via access code" section → 🖺 137

2.7.3   Access via Web server

The device can be operated and configured via a Web browser with the integrated Web server (→ 🖺 73). The connection is via the service interface (CDI-RJ45) or the WLAN interface.

The Web server is enabled when the device is delivered. The Web server can be disabled if necessary (e.g. after commissioning) via the **Web server functionality** parameter.

The device and status information can be hidden on the login page. This prevents unauthorized access to the information.

For detailed information on device parameters, see:
The "Description of Device Parameters" document → 🗐 212.

2.7.4   Access via OPC-UA

The device can communicate with OPC UA clients using the "OPC UA Server" application package.

The OPC UA server integrated in the device can be accessed via the WLAN access point using the WLAN interface - which can be ordered as an optional extra - or the service interface (CDI- RJ45) via Ethernet network. Access rights and authorization as per separate configuration.

The following Security Modes are supported as per the OPC UA Specification (IEC 62541):
- None
- Basic128Rsa15 – signed
- Basic128Rsa15 – signed and encrypted

2.7.5   Access via service interface (CDI-RJ45)

The device can be connected to a network via the service interface (CDI-RJ45). Device-specific functions guarantee the secure operation of the device in a network.

The use of relevant industrial standards and guidelines that have been defined by national and international safety committees, such as IEC/ISA62443 or the IEEE, is recommended. This includes organizational security measures such as the assignment of access authorization as well as technical measures such as network segmentation.

Transmitters with an Ex de approval may not be connected via the service interface (CDI-RJ45)!

Order code for "Approval transmitter + sensor", options (Ex de): BA, BB, C1, C2, GA, GB, MA, MB, NA, NB

3 Product description

The measuring system consists of a transmitter and a sensor. The transmitter and sensor are mounted in physically separate locations. They are interconnected by connecting cables.

3.1 Product design

Two versions of the transmitter are available.

3.1.1 Proline 500 – digital

Signal transmission: digital
Order code for "Integrated ISEM electronics", option **A** "Sensor"

For use in applications not required to meet special requirements due to ambient or operating conditions.

As the electronics are located in the sensor, the device is ideal:
For simple transmitter replacement.

- A standard cable can be used as the connecting cable.
- Not sensitive to external EMC interference.
A0029593

🖻 *1   Important components of a measuring device*

1   Electronics compartment cover
2   Display module
3   Transmitter housing
4   Sensor connection housing with integrated ISEM electronics: connecting cable connection
5   Sensor

3.1.2   Proline 500

Signal transmission: analog
Order code for "Integrated ISEM electronics", option **B** "Transmitter"

For use in applications required to meet special requirements due to ambient or operating conditions.

As the electronics are located in the transmitter, the device is ideal in the event of:
• Strong vibrations at the sensor.
• Sensor operation in underground installations.
• Permanent sensor immersion in water.
A0029589

▣ 2   Important components of a measuring device

1   Connection compartment cover
2   Display module
3   Transmitter housing with integrated ISEM electronics
4   Electronics compartment cover
5   Sensor
6   Sensor connection housing: connecting cable connection
7   Connection compartment cover: connecting cable connection

4 Incoming acceptance and product identification

4.1 Incoming acceptance
| | | | | Are the order codes on the delivery note (1) and the product sticker (2) identical? |
Are the goods undamaged?
Do the nameplate data match the ordering information on the delivery note?
Is the envelope present with accompanying documents?

- If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
- Depending on the device version, the CD-ROM might not be part of the delivery!
  The Technical Documentation is available via the Internet or via the *Endress+Hauser Operations App*, see the "Product identification" section → 🖺 18.

4.2 Product identification

The following options are available for identification of the device:

- Nameplate specifications
- Order code with breakdown of the device features on the delivery note
- Enter serial numbers from nameplates in the *W@M Device Viewer* (www.endress.com/deviceviewer): All information about the device is displayed.
- Enter the serial number from nameplates in the *Endress+Hauser Operations App* or scan the 2-D matrix code (QR code) on the nameplate using the *Endress+Hauser Operations App*: All information about the device is displayed.

For an overview of the scope of the associated Technical Documentation, refer to the following:

- The "Additional standard documentation on the device"→ 📖 8 and "Supplementary device-dependent documentation"→ 📖 8 sections
- The *W@M Device Viewer*: enter the serial number from the nameplate (www.endress.com/deviceviewer)
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

4.2.1 Transmitter nameplate

Proline 500 – digital
A0029194

🖼 *3   Example of a transmitter nameplate*

1   Name of the transmitter
2   Manufacturing location
3   Space for approvals: use in hazardous areas
4   Degree of protection
5   Electrical connection data: available inputs and outputs
6   Permitted ambient temperature (T_a)
7   2-D matrix code
8   Space for approvals and certificates: e.g. CE mark, C-Tick
9   Permitted temperature range for cable
10   Manufacturing date: year-month
11   Firmware version (FW) and device revision (Dev.Rev.) from the factory
12   Document number of safety-related supplementary documentation
13   Space for additional information in the case of special products
14   Available inputs and outputs, supply voltage
15   Electrical connection data: supply voltage
16   Extended order code (ext. ord. cd.)
17   Serial number (ser. no.)
18   Order code

Proline 500
4   Example of a transmitter nameplate

1   *Manufacturing location*

4   *Serial number (ser. no.)*
5   *Extended order code (ext. ord. cd.)*
6   *Degree of protection*
7   *Space for approvals: use in hazardous areas*
8   *Electrical connection data: available inputs and outputs*
9   *2-D matrix code*
10 *Manufacturing date: year-month*
11 *Document number of safety-related supplementary documentation*
12 *Space for approvals and certificates: e.g. CE mark, C-Tick*
13 *Space for degree of protection of connection and electronics compartment when used in hazardous areas*
14 *Firmware version (FW) and device revision (Dev.Rev.) from the factory*
15 *Space for additional information in the case of special products*
16 *Permitted temperature range for cable*
17 *Permitted ambient temperature (T_a)*
18 *Information on cable gland*
19 *Available inputs and outputs, supply voltage*
20 *Electrical connection data: supply voltage*

4.2.2 Sensor nameplate
5   Example of a sensor nameplate

1   Manufacturing location
2   Name of the sensor
3   Order code
4   Serial number (ser. no.)
5   Extended order code (ext. ord. cd.)
6   Nominal diameter of sensor
7   Test pressure of the sensor
8   Flange nominal diameter/nominal pressure
9   Material of measuring tube and manifold
10   Medium temperature range
11   CE mark, C-Tick
12   Additional information on version: certificates, approvals
13   Manufacturing date: year-month
14   Flow direction
15   2-D matrix code
16   Degree of protection
17   Approval information for explosion protection and Pressure Equipment Directive
18   Permitted ambient temperature (T_a)
19   Document number of safety-related supplementary documentation

Order code

The measuring device is reordered using the order code.

Extended order code

- The device type (product root) and basic specifications (mandatory features) are always listed.
- Of the optional specifications (optional features), only the safety and approval-related specifications are listed (e.g. LA). If other optional specifications are also ordered, these are indicated collectively using the # placeholder symbol (e.g. #LA#).
- If the ordered optional specifications do not include any safety and approval-related specifications, they are indicated by the + placeholder symbol (e.g. XXXXXX-ABCDE +).

4.2.3   Symbols on measuring device

Symbol	Meaning
⚠	**WARNING!** This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.
📖	**Reference to documentation** Refers to the corresponding device documentation.
⏚	**Protective ground connection** A terminal which must be connected to ground prior to establishing any other connections.

5 Storage and transport

5.1 Storage conditions

Observe the following notes for storage:
- ▶ Store in the original packaging to ensure protection from shock.
- ▶ Do not remove protective covers or protective caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.
- ▶ Protect from direct sunlight to avoid unacceptably high surface temperatures.
- ▶ Store in a dry and dust-free place.
- ▶ Do not store outdoors.

Storage temperature→ 🔖 199

5.2 Transporting the product

Transport the measuring device to the measuring point in the original packaging.
A0029252

🛈 Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

5.2.1 Measuring devices without lifting lugs

⚠ WARNING

Center of gravity of the measuring device is higher than the suspension points of the webbing slings.
Risk of injury if the measuring device slips.
- ▶ Secure the measuring device against slipping or turning.
- ▶ Observe the weight specified on the packaging (stick-on label).
A0029214

5.2.2   Measuring devices with lifting lugs

⚠ CAUTION

Special transportation instructions for devices with lifting lugs
‣ Only use the lifting lugs fitted on the device or flanges to transport the device.
‣ The device must always be secured at two lifting lugs at least.

5.2.3   Transporting with a fork lift

If transporting in wood crates, the floor structure enables the crates to be lifted lengthwise or at both sides using a forklift.

5.3   Packaging disposal

All packaging materials are environmentally friendly and 100 % recyclable:
• Outer packaging of device
  Polymer stretch wrap that complies with EU Directive 2002/95/EC (RoHS)
• Packaging
  • Wooden crate treated in accordance with ISPM 15 standard, confirmed by IPPC logo
  • Cardboard box in accordance with European packaging guideline 94/62EC,
    recyclability confirmed by Resy symbol
• Carrying and securing materials
  • Disposable plastic pallet
  • Plastic straps
  • Plastic adhesive strips
• Filler material
  Paper pads

6   Mounting

6.1   Installation conditions

6.1.1   Mounting position

Mounting location
A0028772

To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:
• Highest point of a pipeline.
• Directly upstream of a free pipe outlet in a down pipe.

Installation in down pipes

However, the following installation suggestion allows for installation in an open vertical pipeline. Pipe restrictions or the use of an orifice with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.
A0028773

🖻 *6   Installation in a down pipe (e.g. for batching applications)*
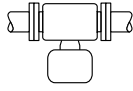

1   Supply tank
2   Sensor
3   Orifice plate, pipe restriction
4   Valve
5   Batching tank

DN		Ø orifice plate, pipe restriction	
[mm]	[in]	[mm]	[in]
1	1/24	0.8	0.03
2	1/12	1.5	0.06
4	1/8	3.0	0.12
6	1/4	5.0	0.20

Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

Orientation			Recommendation
A	Vertical orientation	A0015591	✅✅
B	Horizontal orientation, transmitter at top	A0015589	✅✅ [1]

	Orientation		Recommendation
C	Horizontal orientation, transmitter at bottom	A0015590	✓✓ [2)]
D	Horizontal orientation, transmitter at side	A0015592	✗

1)   Applications with low process temperatures may decrease the ambient temperature. To maintain the minimum ambient temperature for the transmitter, this orientation is recommended.
2)   Applications with high process temperatures may increase the ambient temperature. To maintain the maximum ambient temperature for the transmitter, this orientation is recommended.

Inlet and outlet runs

No special precautions need to be taken for fittings which create turbulence, such as valves, elbows or T-pieces, as long as no cavitation occurs → 🖺 25.
Installation dimensions

📖 For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section.

6.1.2 Environmental and process requirements

Ambient temperature range

Measuring device	• –40 to +60 °C (–40 to +140 °F) • Order code for "Test, certificate", option JP: –50 to +60 °C (–58 to +140 °F)
Readability of the local display	–20 to +60 °C (–4 to +140 °F) The readability of the display may be impaired at temperatures outside the temperature range.

🛈 Dependency of ambient temperature on medium temperature→ 🖺 200

▸ If operating outdoors:
  Avoid direct sunlight, particularly in warm climatic regions.

🛈 You can order a weather protection cover from Endress+Hauser. → 🖺 182.

System pressure

It is important that cavitation does not occur, or that gases entrained in the liquids do not outgas.

Cavitation is caused if the pressure drops below the vapor pressure:
• In liquids that have a low boiling point (e.g. hydrocarbons, solvents, liquefied gases)
• In suction lines

▸ Ensure the system pressure is sufficiently high to prevent cavitation and outgassing.

For this reason, the following mounting locations are recommended:
- At the lowest point in a vertical pipe
- Downstream from pumps (no danger of vacuum)
Thermal insulation

In the case of some fluids, it is important to keep the heat radiated from the sensor to the transmitter to a low level. A wide range of materials can be used for the required insulation.

NOTICE

Electronics overheating on account of thermal insulation!
- ▶ Recommended orientation: horizontal orientation, sensor connection housing pointing downwards.
- ▶ Do not insulate the sensor connection housing.
- ▶ Maximum permissible temperature at the lower end of the sensor connection housing: 80 ℃ (176 ℉)
- ▶ Thermal insulation with extended neck free: We recommend that you do not insulate the extended neck in order to ensure optimum dissipation of heat.
 7   Thermal insulation with extended neck free

Heating

NOTICE

Electronics can overheat due to elevated ambient temperature!
- ▶ Observe maximum permitted ambient temperature for the transmitter .
- ▶ Depending on the fluid temperature, take the device orientation requirements into account .

NOTICE

Danger of overheating when heating
- ▶ Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 ℃ (176 ℉).
- ▶ Ensure that sufficient convection takes place at the transmitter neck.
- ▶ Ensure that a sufficiently large area of the transmitter neck remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.
- ▶ When using in potentially explosive atmospheres, observe the information in the device-specific Ex documentation. For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

Heating options

If a fluid requires that no heat loss should occur at the sensor, users can avail of the following heating options:
• Electrical heating, e.g. with electric band heaters
• Via pipes carrying hot water or steam
• Via heating jackets

Vibrations

The high oscillation frequency of the measuring tubes ensures that the correct operation of the measuring system is not influenced by plant vibrations.

6.1.3   Special mounting instructions

Sanitary compatibility

When installing in hygienic applications, please refer to the information in the "Certificates and approvals/hygienic compatibility" section

Rupture disk

Information that is relevant to the process: → 🖹 201.

⚠ WARNING

Danger from medium escaping!
Medium escaping under pressure can cause injury or material damage.
▶ Take precautions to prevent danger to persons and damage if the rupture disk is actuated.
▶ Observe information on the rupture disk sticker.
▶ Make sure that the function and operation of the rupture disk is not impeded through the installation of the device.
▶ Do not use a heating jacket.
▶ Do not remove or damage the rupture disk.

The position of the rupture disk is indicated on a sticker beside it.
A0029940

1   Rupture disk label

Wall mounting

⚠ WARNING

Incorrect sensor mounting

Risk of injury if measuring tube breaks
- ▸ The sensor should never be installed in a pipe in a way that it is freely suspended
- ▸ Using the base plate, mount the sensor directly on the floor, wall or ceiling.
- ▸ Support the sensor on a securely mounted support base (e.g. angle bracket).

The following mounting versions are recommended for the installation.

Vertical
- Mounted directly on a wall using the base plate, or
- Device supported on an angle bracket mounted on the wall
A0030286

Horizontal
Device standing on a solid support base
A0030287

Mounting plate

The universal mounting plate can be used to affix or place the unit on a flat surface (order code for "Accessories", option PA).

1   *1 x Cubemass mounting plate*
2   *4 x screw M5 x 8*
3   *4 x grommet*

Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions→ ⊠ 195. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:
• To achieve maximum measuring accuracy even with low flow rates.
• Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

A0029552

⊠ *9*   *Protective cover for Proline 500 – digital; engineering unit mm (in)*
A0029553

⊞ *10   Protective cover for Proline 500; engineering unit mm (in)*

Cover locking: Proline 500

NOTICE

Order code for "Transmitter housing", option L "Cast, stainless": The covers of the transmitter housing are provided with a borehole to lock the cover.
The cover can be locked using screws and a chain or cable provided by the customer.
▸ It is recommended to use stainless steel cables or chains.
▸ If a protective coating is applied, it is recommended to use a heat shrink tube to protect the housing paint.
A0029799

1   Cover borehole for the securing screw
2   Securing screw to lock the cover

6.2   Mounting the measuring device

6.2.1   Required tools

For transmitter

For mounting on a post:
• Proline 500 – digital transmitter
  • Open-ended wrench AF 10
  • Torx screwdriver TX 25
• Proline 500 transmitter
  Open-ended wrench AF 13

For wall mounting:
Drill with drill bit Ø 6.0 mm

For sensor

For flanges and other process connections: Corresponding mounting tools

6.2.2   Preparing the measuring device

1. Remove all remaining transport packaging.

2. Remove any protective covers or protective caps present from the sensor.

3. Remove stick-on label on the electronics compartment cover.

6.2.3   Mounting the measuring device

⚠ WARNING

Danger due to improper process sealing!
▶ Ensure that the inside diameters of the gaskets are greater than or equal to that of the process connections and piping.
▶ Ensure that the seals are clean and undamaged.
▶ Secure the seals correctly.

1. Ensure that the direction of the arrow on the nameplate of the sensor matches the flow direction of the fluid.

2. Install the measuring device or turn the transmitter housing so that the cable entries do not point upwards.
A0029263

6.2.4   Mounting the transmitter housing: Proline 500 – digital

⚠ CAUTION

Ambient temperature too high!
Danger of electronics overheating and housing deformation.
▶ Do not exceed the permitted maximum ambient temperature .
▶ If operating outdoors: Avoid direct sunlight and exposure to weathering, particularly in warm climatic regions.

⚠ CAUTION

Excessive force can damage the housing!
▶ Avoid excessive mechanical stress.

The transmitter can be mounted in the following ways:
• Post mounting
• Wall mounting

Post mounting

⚠️ **WARNING**

Excessive tightening torque applied to the fixing screws!
Risk of damaging the plastic transmitter.
▸ Tighten the fixing screws as per the tightening torque: 2 Nm (1.5 lbf ft)
⊡ *11   Engineering unit mm (in)*

Wall mounting
⊡ *12   Engineering unit mm (in)*

L   Depends on order code for "Transmitter housing"

Order code for "Transmitter housing"
- Option **A**, aluminum coated: L =14 mm (0.55 in)
- Option **D**, polycarbonate: L = 13 mm (0.51 in)

1. Drill the holes.

2. Insert wall plugs into the drilled holes.

3. Screw in the securing screws slightly at first.

4. Fit the transmitter housing over the securing screws and mount in place.

5. Tighten the securing screws.

6.2.5 Mounting the transmitter housing: Proline 500

⚠ CAUTION

Ambient temperature too high!
Danger of electronics overheating and housing deformation.
▶ Do not exceed the permitted maximum ambient temperature .
▶ If operating outdoors: Avoid direct sunlight and exposure to weathering, particularly in warm climatic regions.

⚠ CAUTION

Excessive force can damage the housing!
▶ Avoid excessive mechanical stress.

The transmitter can be mounted in the following ways:
• Post mounting
• Wall mounting

Wall mounting
🖼 *13   Engineering unit mm (in)*

1. Drill the holes.

2. Insert wall plugs into the drilled holes.

3. Screw in the securing screws slightly at first.

4. Fit the transmitter housing over the securing screws and mount in place.

5. Tighten the securing screws.

Post mounting

⚠️ **WARNING**

Order code for "Transmitter housing", option L "Cast, stainless": cast transmitters are very heavy.

They are unstable if they are not mounted on a secure, fixed post.

▸ Only mount the transmitter on a secure, fixed post on a stable surface.
🔲 *14   Engineering unit mm (in)*

6.2.6   Turning the transmitter housing: Proline 500

To provide easier access to the connection compartment or display module, the transmitter housing can be turned.
1. Depending on the device version: Loosen the securing clamp of the connection compartment cover.

2. Unscrew the connection compartment cover.

3. Release the fixing screw.

4. Turn the housing to the desired position.

5. Firmly tighten the securing screw.

6. Screw on the connection compartment cover.

7. Depending on the device version: Attach the securing clamp of the connection compartment cover.

6.2.7 Turning the display module: Proline 500

The display module can be turned to optimize display readability and operability.
A0030035

1. Depending on the device version: Loosen the securing clamp of the connection compartment cover.

2. Unscrew the connection compartment cover.

3. Turn the display module to the desired position: max. 8 × 45° in each direction.

4. Screw on the connection compartment cover.

5. Depending on the device version: Attach the securing clamp of the connection compartment cover.

6.3 Post-installation check

Is the device undamaged (visual inspection)?	☐
Does the measuring device conform to the measuring point specifications? For example: • Process temperature → 🖹 200 • Process pressure (refer to the section on "Pressure-temperature ratings" in the "Technical Information" document) • Ambient temperature • Measuring range	☐
Has the correct orientation for the sensor been selected ? • According to sensor type • According to medium temperature • According to medium properties (outgassing, with entrained solids)	☐
Does the arrow on the sensor nameplate match the direction of flow of the fluid through the piping → 🖹 24?	☐
Are the measuring point identification and labeling correct (visual inspection)?	☐
Is the device adequately protected from precipitation and direct sunlight?	☐
Are the securing screw and securing clamp tightened securely?	☐

7   Electrical connection

> **NOTICE**
>
> **The measuring device does not have an internal circuit breaker.**
> ▶ For this reason, assign the measuring device a switch or power-circuit breaker so that the power supply line can be easily disconnected from the mains.
> ▶ Although the measuring device is equipped with a fuse, additional overcurrent protection (maximum 10 A) should be integrated into the system installation.

7.1   Connection conditions

7.1.1   Required tools

- For cable entries: Use corresponding tools
- For securing clamp: Allen key 3 mm
- Wire stripper
- When using stranded cables: crimper for wire end ferrule
- For removing cables from terminal: Flat blade screwdriver ≤ 3 mm (0.12 in)

7.1.2   Requirements for connecting cable

The connecting cables provided by the customer must fulfill the following requirements.

Electrical safety

In accordance with applicable federal/national regulations.

Protective ground cable

Cable $\geq$2.08 mm^2 (14 AWG)

The grounding impedance must be less than 1 Ω.

Permitted temperature range

- The installation guidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

Power supply cable

Standard installation cable is sufficient.

Signal cable

Current output 4 to 20 mA HART

A shielded cable is recommended. Observe grounding concept of the plant.

Current output 0/4 to 20 mA

Standard installation cable is sufficient.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Double pulse output

Standard installation cable is sufficient.

Relay output

Standard installation cable is sufficient.

Current input 0/4 to 20 mA

Standard installation cable is sufficient.

Status input

Standard installation cable is sufficient.

Cable diameter

- Cable glands supplied:
  M20 × 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
- Spring-loaded terminals: Suitable for strands and strands with ferrules.
  Conductor cross-section 0.2 to 2.5 mm² (24 to 12 AWG).

Choice of connecting cable between the transmitter and sensor

Depends on the type of transmitter and the installation zones
1   Proline 500 digital transmitter
2   Proline 500 transmitter
3   Sensor Cubemass
4   Non-hazardous area
5   Hazardous area: Zone 2; Class I, Division 2
6   Hazardous area: Zone 1; Class I, Division 1
A   Standard cable to 500 digital transmitter → 🖹 38
      Transmitter installed in the non-hazardous area or hazardous area: Zone 2; Class I, Division 2 / sensor
      installed in the hazardous area: Zone 2; Class I, Division 2
B   Standard cable to 500 digital transmitter → 🖹 38
      Transmitter installed in the hazardous area: Zone 2; Class I, Division 2 / sensor installed in the hazardous
      area: Zone 1; Class I, Division 1
C   Signal cable to 500 transmitter → 🖹 40
      Transmitter and sensor installed in the hazardous area: Zone 2; Class I, Division 2 oder Zone 1;
      Class I, Division 1

A: Connecting cable between sensor and transmitter: Proline 500 – digital

Standard cable

A standard cable with the following specifications can be used as the connecting cable.

Design	4 cores (2 pairs); uninsulated stranded CU wires; pair-stranded with common shield
Shielding	Tin-plated copper-braid, optical cover ≥ 85 %
Loop resistance	Power supply line (+, −): maximum 10 Ω
Cable length	Maximum 300 m (1 000 ft), see the following table.

Cross-section	Cable length [max.]
0.34 mm² (AWG 22)	80 m (270 ft)
0.50 mm² (AWG 20)	120 m (400 ft)
0.75 mm² (AWG 18)	180 m (600 ft)
1.00 mm² (AWG 17)	240 m (800 ft)
1.50 mm² (AWG 15)	300 m (1 000 ft)

Optionally available connecting cable
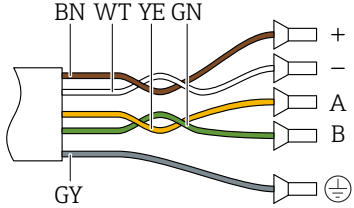

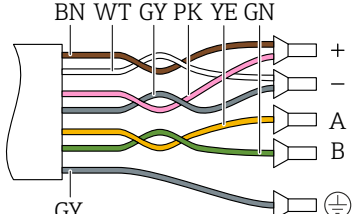

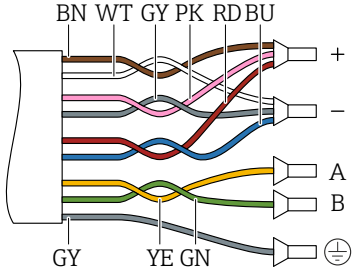

Design	2 × 2 × 0.34 mm² (AWG 22) PVC cable [1] with common shield (2 pairs, uninsulated stranded CU wires; pair-stranded)
Flame resistance	According to DIN EN 60332-1-2
Oil-resistance	According to DIN EN 60811-2-1
Shielding	Tin-plated copper-braid, optical cover ≥ 85 %
Operating temperature	When mounted in a fixed position: −50 to +105 ℃ (−58 to +221 ℉); when cable can move freely: −25 to +105 ℃ (−13 to +221 ℉)
Available cable length	Fixed: 20 m (65 ft); variable: up to maximum 50 m (165 ft)

1)   UV radiation can impair the cable outer sheath. Protect the cable from direct sunshine where possible.

B: Connecting cable between sensor and transmitter: Proline 500 - digital

Standard cable

A standard cable with the following specifications can be used as the connecting cable.

Design	4, 6, 8 cores (2, 3, 4 pairs); uninsulated stranded CU wires; pair-stranded with common shield
Shielding	Tin-plated copper-braid, optical cover ≥ 85 %
Capacitance C	Maximum 760 nF IIC, maximum 4.2 µF IIB
Inductance L	Maximum 26 µH IIC, maximum 104 µH IIB
Inductance/resistance ratio (L/R)	Maximum 8.9 µH/Ω IIC, maximum 35.6 µH/Ω IIB (e.g. in accordance with IEC 60079-25)
Loop resistance	Power supply line (+, −): maximum 5 Ω
Cable length	Maximum 150 m (500 ft), see the following table.

Cross-section	Cable length [max.]	Termination
2 x 2 x 0.50 mm^2 (AWG 20)	50 m (165 ft)	2 x 2 x 0.50 mm^2 (AWG 20) BN WT YE GN +, −, A, B, ⏚ GY • +, − = 0.5 mm^2 • A, B = 0.5 mm^2
3 x 2 x 0.50 mm^2 (AWG 20)	100 m (330 ft)	3 x 2 x 0.50 mm^2 (AWG 20) BN WT GY PK YE GN +, −, A, B, ⏚ GY • +, − = 1.0 mm^2 • A, B = 0.5 mm^2
4 x 2 x 0.50 mm^2 (AWG 20)	150 m (500 ft)	4 x 2 x 0.50 mm^2 (AWG 20) BN WT GY PK RD BU +, −, A, B, ⏚ GY YE GN • +, − = 1.5 mm^2 • A, B = 0.5 mm^2

Optionally available connecting cable

Connecting cable for	Zone 1; Class I, Division 1
Standard cable	2 × 2 × 0.5 mm^2 (AWG 20) PVC cable [1] with common shield (2 pairs, pair-stranded)
Flame resistance	According to DIN EN 60332-1-2
Oil-resistance	According to DIN EN 60811-2-1
Shielding	Tin-plated copper-braid, optical cover ≥ 85 %
Operating temperature	When mounted in a fixed position: −50 to +105 ℃ (−58 to +221 ℉); when cable can move freely: −25 to +105 ℃ (−13 to +221 ℉)
Available cable length	Fixed: 20 m (65 ft); variable: up to maximum 50 m (165 ft)

1) UV radiation can impair the cable outer sheath. Protect the cable from direct sunshine where possible.

C: Connecting cable between sensor and transmitter: Proline 500

Standard cable	6 × 0.38 mm² PVC cable [1] with common shield and individually shielded cores
Conductor resistance	≤50 Ω/km (0.015 Ω/ft)
Capacitance: core/shield	≤420 pF/m (128 pF/ft)
Cable length (max.)	20 m (65 ft)
Cable lengths (available for order)	5 m (15 ft), 10 m (32 ft), 20 m (65 ft)
Operating temperature	max. 105 °C (221 °F)

1)   UV radiation can impair the cable outer sheath. Protect the cable from direct sunshine where possible.

7.1.3   Terminal assignment

Transmitter: supply voltage, input/outputs

The terminal assignment of the inputs and outputs depends on the individual order version of the device. The device-specific terminal assignment is documented on an adhesive label in the terminal cover.

Supply voltage		Input/output 1		Input/output 2		Input/output 3		Input/output 4	
1 (+)	2 (−)	26 (+)	27 (−)	24 (+)	25 (−)	22 (+)	23 (−)	20 (+)	21 (−)
		Device-specific terminal assignment: adhesive label in terminal cover.							

Transmitter and sensor connection housing: connecting cable

The sensor and transmitter, which are mounted in separate locations, are interconnected by a connecting cable. The cable is connected via the sensor connection housing and the transmitter housing.

Terminal assignment and connection of the connecting cable:
- Proline 500 – digital→ 🖺 41
- Proline 500 → 🖺 48

7.1.4   Preparing the measuring device

Carry out the steps in the following order:

1. Mount the sensor and transmitter.

2. Connection housing, sensor: Connect connecting cable.

3. Transmitter: Connect connecting cable.

4. Transmitter: Connect signal cable and cable for supply voltage.

> **NOTICE**
> **Insufficient sealing of the housing!**
> Operational reliability of the measuring device could be compromised.
> ▸ Use suitable cable glands corresponding to the degree of protection.

1. Remove dummy plug if present.

2. If the measuring device is supplied without cable glands:
   Provide suitable cable gland for corresponding connecting cable.

3. If the measuring device is supplied with cable glands:
   Observe requirements for connecting cables → 🖺 36.

7.2 Connecting the measuring device: Proline 500 - digital

NOTICE

Limitation of electrical safety due to incorrect connection!

▸ Have electrical connection work carried out by appropriately trained specialists only.
▸ Observe applicable federal/national installation codes and regulations.
▸ Comply with local workplace safety regulations.
▸ Always connect the protective ground cable ⊕ before connecting additional cables.
▸ For use in potentially explosive atmospheres, observe the information in the device-specific Ex documentation.

7.2.1 Connecting the connecting cable

⚠ WARNING

Risk of damaging the electronic components!

▸ Connect the sensor and transmitter to the same potential equalization.
▸ Only connect the sensor to a transmitter with the same serial number.
▸ Ground the connection housing of the sensor via the external screw terminal.

Connecting cable terminal assignment
A0028198

1   Cable entry for cable on transmitter housing
2   Protective earth (PE)
3   Connecting cable ISEM communication
4   Grounding via ground connection; on device plug versions grounding is through the plug itself
5   Cable entry for cable or connection of device plug on sensor connection housing
6   Protective earth (PE)

Connecting the connecting cable to the sensor connection housing

- Connection via terminals with order code for "Sensor connection housing":
  - Option **A** "Aluminum, coated"→ 🖹 42
  - Option **B** "Stainless" → 🖹 43
  - Option **L** "Cast, stainless"→ 🖹 42
- Connection via connectors with order code for "Sensor connection housing":
  Option **C** "Ultra-compact hygienic, stainless"→ 🖹 44

Connecting the connecting cable to the transmitter

The cable is connected to the transmitter via terminals → 🖹 45.

Connecting the sensor connection housing via terminals

For the device version with the order code for "Sensor connection housing":
- Option **A** "Aluminum coated"
- Option **L** "Cast, stainless"
A0029616

1. Loosen the securing clamp of the housing cover.

2. Unscrew the housing cover.

3. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.

4. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.

5. Connect the protective ground.

6. Connect the cable in accordance with the connecting cable terminal assignment.

7. Firmly tighten the cable glands.
   ↳ This concludes the process for connecting the connecting cable.

⚠ WARNING

Housing degree of protection voided due to insufficient sealing of the housing.

▸ Screw in the thread on the cover without using any lubricant. The thread on the cover is coated with a dry lubricant.

8. Screw on the housing cover.

9. Tighten the securing clamp of the housing cover.

Connecting the sensor connection housing via terminals

For the device version with the order code for "Sensor connection housing":
Option **B** "Stainless"

A0029613

1. Release the securing screw of the housing cover.

2. Open the housing cover.

3. Push the cable through the cable entry . To ensure tight sealing, do not remove the sealing ring from the cable entry.

4. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.

5. Connect the protective ground.

6. Connect the cable in accordance with the connecting cable terminal assignment.

7. Firmly tighten the cable glands.
   ↳ This concludes the process for connecting the connecting cable.

8. Close the housing cover.

9. Tighten the securing screw of the housing cover.

Connecting the sensor connection housing via the connector

For the device version with the order code for "Sensor connection housing":
Option **C** "Ultra-compact hygienic, stainless"

A0029615

1. Connect the protective ground.

2. Connect the connector.

Connecting the connecting cable to the transmitter

A0029597

1. Loosen the 4 fixing screws on the housing cover.

2. Open the housing cover.

3. Fold open the terminal cover.

4. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.

5. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.

6. Connect the protective ground.

7. Connect the cable in accordance with the connecting cable terminal assignment → 🖺 41.

8. Firmly tighten the cable glands.
   ↳ This concludes the process for connecting the connecting cable.

9. Close the housing cover.

10. Tighten the securing screw of the housing cover.

11. After connecting the connecting cable:
    Connect the signal cable and the supply voltage cable → 🖺 46.

7.2.2 Connecting the signal cable and the supply voltage cable
A0028200

1 Terminal connection for supply voltage
2 Terminal connection for signal transmission, input/output
3 Terminal connection for signal transmission, input/output
4 Terminal connection for connecting cable between sensor and transmitter
5 Terminal connection for signal transmission, input/output; optional: connection for external WLAN antenna
6 Protective earth (PE)
A0029597

1. Loosen the 4 fixing screws on the housing cover.

2. Open the housing cover.

3. Fold open the terminal cover.

4. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.

5. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.

6. Connect the protective ground.

7. Connect the cable in accordance with the terminal assignment .

   ↳ **Signal cable terminal assignment:** The device-specific terminal assignment is documented on an adhesive label in the terminal cover.
   Supply voltage terminal assignment: Adhesive label in the terminal cover or → 🖺 40.

8. Firmly tighten the cable glands.

   ↳ This concludes the cable connection process.

9. Close the terminal cover.

10. Close the housing cover.

> ⚠ **WARNING**
>
> **Housing degree of protection may be voided due to insufficient sealing of the housing.**
> ▸ Screw in the screw without using any lubricant.

> ⚠ **WARNING**
>
> **Excessive tightening torque applied to the fixing screws!**
> Risk of damaging the plastic transmitter.
> ▸ Tighten the fixing screws as per the tightening torque: 2 Nm (1.5 lbf ft)

11. Tighten the 4 fixing screws on the housing cover.

Removing a cable
🔲 *15   Engineering unit mm (in)*

1. To remove a cable from the terminal, use a flat-blade screwdriver to push the slot between the two terminal holes

2. while simultaneously pulling the cable end out of the terminal.

7.3   Connecting the measuring device: Proline 500

NOTICE

Limitation of electrical safety due to incorrect connection!

▸ Have electrical connection work carried out by appropriately trained specialists only.
▸ Observe applicable federal/national installation codes and regulations.

2   Power supply
3   Transmitter

7.6   Ensuring the degree of protection

The measuring device fulfills all the requirements for the IP66/67 degree of protection, Type 4X enclosure.

To guarantee IP66/67 degree of protection, Type 4X enclosure, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly.

2. Dry, clean or replace the seals if necessary.

3. Tighten all housing screws and screw covers.

4. Firmly tighten the cable glands.

5. To ensure that moisture does not enter the cable entry:

   Route the cable so that it loops down before the cable entry ("water trap").
A0029278

6. Insert dummy plugs into unused cable entries.

7.7   Post-connection check

Are cables or the device undamaged (visual inspection)?	❑
Do the cables used meet the requirements?	❑
Do the cables have adequate strain relief?	❑
Are all the cable glands installed, firmly tightened and leak-tight? Cable run with "water trap" → 🖺 58?	❑

8   Operation options

A0018237-EN

🖺 29   Schematic structure of the operating menu

8.2.2 Operating philosophy

The individual parts of the operating menu are assigned to certain user roles (operator, maintenance etc.). Each user role contains typical tasks within the device lifecycle.

Menu/parameter		User role and tasks	Content/meaning
Language	task-oriented	**Role "Operator", "Maintenance"** Tasks during operation: • Configuring the operational display • Reading measured values	• Defining the operating language • Defining the Web server operating language • Resetting and controlling totalizers
Operation			• Configuring the operational display (e.g. display format, display contrast) • Resetting and controlling totalizers
Setup		**"Maintenance" role** Commissioning: • Configuration of the measurement • Configuration of the inputs and outputs • Configuration of the communication interface	Wizards for fast commissioning: • Setting the system units • Configuration of the communication interface • Defining the medium • Displaying the I/O/configuration • Configuring the inputs • Configuring the outputs • Configuration of the operational display • Setting the low flow cut off • Configuring partial and empty pipe detection Advanced setup • For more customized configuration of the measurement (adaptation to special measuring conditions) • Configuration of totalizers • Configuring the WLAN settings • Administration (define access code, reset measuring device)

Diagnostics		**"Maintenance" role**
		Fault elimination:
		• Diagnostics and elimination of process and device errors
		• Measured value simulation
			Contains all parameters for error detection and analyzing process and device errors:
			• Diagnostic list
			  Contains up to 5 currently pending diagnostic messages.
			• Event logbook
			  Contains event messages that have occurred.
			• Device information
			  Contains information for identifying the device.
			• Measured values
			  Contains all current measured values.
			• **Data logging** submenu with "Extended HistoROM" order option
			  Storage and visualization of measured values
			• Heartbeat
			  The functionality of the device is checked on demand and the verification results are documented.
			• Simulation
			  Is used to simulate measured values or output values.

Expert	function-oriented	Tasks that require detailed knowledge of the function of the device:
		• Commissioning measurements under difficult conditions
		• Optimal adaptation of the measurement to difficult conditions
		• Detailed configuration of the communication interface
		• Error diagnostics in difficult cases
			Contains all the parameters of the device and makes it possible to access these parameters directly using an access code. The structure of this menu is based on the function blocks of the device:
			• System
			  Contains all higher-order device parameters which do not concern the measurement or the communication interface.
			• Sensor
			  Configuration of the measurement.
			• Input
			  Configuration of the status input.
			• Output
			  Configuration of the analog current outputs as well as the pulse/frequency and switch output.
			• Communication
			  Configuration of the digital communication interface and the Web server.
			• Application
			  Configuration of the functions that go beyond the actual measurement (e.g. totalizer).
			• Diagnostics
			  Error detection and analysis of process and device errors and for device simulation and Heartbeat Technology.

8.3   Access to the operating menu via the local display

8.3.1   Operational display
1   Operational display
2   Device tag
3   Status area
4   Display area for measured values (4-line)
5   Operating elements→ 🖹 68

Status area

The following symbols appear in the status area of the operational display at the top right:
- Status signals→ 🖹 159
  - **F**: Failure
  - **C**: Function check
  - **S**: Out of specification
  - **M**: Maintenance required
- Diagnostic behavior→ 🖹 160
  - 🚫: Alarm
  - ⚠: Warning
- 🔒: Locking (the device is locked via the hardware)
- ⇿: Communication (communication via remote operation is active)

Display area

In the display area, each measured value is prefaced by certain symbol types for further description:

	Measured variable	Measurement channel number	Diagnostic behavior
	↓	↓	↓
Example	⏻	①	⚠
			Appears only if a diagnostics event is present for this measured variable.

Measured values

Symbol	Meaning
ṁ	Mass flow
U̇	• Volume flow • Corrected volume flow

(density symbol)	• Density • Reference density
(temperature symbol)	Temperature
Σ	Totalizer ℹ️ The measurement channel number indicates which of the three totalizers is displayed.
(output symbol)	Output ℹ️ The measurement channel number indicates which of the outputs is displayed.
(status input symbol)	Status input

Measurement channel numbers

Symbol	Meaning
①…④	Measurement channel 1 to 4
The measurement channel number is displayed only if more than one channel is present for the same measured variable type (e.g. Totalizer 1 to 3).	

Diagnostic behavior

The diagnostic behavior pertains to a diagnostic event that is relevant to the displayed measured variable. For information on the symbols → 🖺 160

ℹ️ The number and display format of the measured values can be configured via the **Format display** parameter (→ 🖺 118).

8.3.2 Navigation view
1 Navigation view
2 Navigation path to current position
3 Status area
4 Display area for navigation
5 Operating elements → 🖺 68

Navigation path

The navigation path - displayed at the top left in the navigation view - consists of the following elements:

	• In the submenu: Display symbol for menu • In the wizard: Display symbol for wizard	Omission symbol for operating menu levels in between	Name of current • Submenu • Wizard • Parameters
	↓	↓	↓
Examples	⟨symbol⟩	/../	**Display**
	⟨symbol⟩	/../	**Display**

For more information about the icons in the menu, refer to the "Display area" section → 🖹 65

Status area

The following appears in the status area of the navigation view in the top right corner:
• In the submenu
  • The direct access code for the parameter you are navigating to (e.g. 0022-1)
  • If a diagnostic event is present, the diagnostic behavior and status signal
• In the wizard
  If a diagnostic event is present, the diagnostic behavior and status signal

• For information on the diagnostic behavior and status signal → 🖹 159
• For information on the function and entry of the direct access code → 🖹 70

Display area

Menus

Symbol	Meaning
⟨symbol⟩	**Operation** Appears: • In the menu next to the "Operation" selection • At the left in the navigation path in the **Operation** menu
⟨symbol⟩	**Setup** Appears: • In the menu next to the "Setup" selection • At the left in the navigation path in the **Setup** menu
⟨symbol⟩	**Diagnostics** Appears: • In the menu next to the "Diagnostics" selection • At the left in the navigation path in the **Diagnostics** menu
⟨symbol⟩	**Expert** Appears: • In the menu next to the "Expert" selection • At the left in the navigation path in the **Expert** menu

Submenus, wizards, parameters

Symbol	Meaning
⟨symbol⟩	Submenu
⟨symbol⟩	Wizard
⟨symbol⟩	Parameters within a wizard No display symbol exists for parameters in submenus.

Locking

Symbol	Meaning
🔒	**Parameter locked** When displayed in front of a parameter name, indicates that the parameter is locked. • By a user-specific access code • By the hardware write protection switch

Wizard operation

Symbol	Meaning
←	Switches to the previous parameter.
✓	Confirms the parameter value and switches to the next parameter.
E	Opens the editing view of the parameter.

8.3.3   Editing view

Numeric editor
🖼 30   For entering values in parameters (e.g. limit values)

1   Entry display area
2   Input screen
3   Confirm, delete or reject entry
4   Operating elements

Text editor
🖼 31   For entering text in parameters (e.g. tag name)

1   Entry display area
2   Current input screen
3   Change input screen
4   Operating elements
5   Move entry position
6   Delete entry
7   Reject or confirm entry
Using the operating elements in the editing view

Operating key(s)	Meaning
⊟	**Minus key** Move the entry position to the left.
⊞	**Plus key** Move the entry position to the right.
Ⓔ	**Enter key** • Press the key briefly: confirm your selection. • Press the key for 2 s: confirm the entry.
⊟ + ⊞	**Escape key combination (press keys simultaneously)** Close the editing view without accepting the changes.

Input screens
Symbol	Meaning
A..	Upper case
a..	Lower case
1..	Numbers
✦..	Punctuation marks and special characters: = + – * / ² ³ ¼ ½ ¾ ( ) [ ] < > { }
@..	Punctuation marks and special characters: ' " ` ^ . , ; : ? ! % µ ° € $ £ ¥ § @ # / \ I ~ & _
ä..	Umlauts and accents

Controlling data entries

Symbol	Meaning
←→	Move entry position
✗	Reject entry
✓	Confirm entry
← ✗	Delete character immediately to the left of the entry position
del	Delete character immediately to the right of the entry position
C	Clear all the characters entered

8.3.4   Operating elements

Operating key(s)	Meaning
⊖	**Minus key** *In a menu, submenu* Moves the selection bar upwards in a picklist. *With a Wizard* Confirms the parameter value and goes to the previous parameter. *With a text and numeric editor* Move the entry position to the left.
⊕	**Plus key** *In a menu, submenu* Moves the selection bar downwards in a picklist. *With a Wizard* Confirms the parameter value and goes to the next parameter. *With a text and numeric editor* Move the entry position to the right.

Ⓔ	**Enter key**
	
	For operational display
	Pressing the key briefly opens the operating menu.
	
	In a menu, submenu
	• Pressing the key briefly:
	  • Opens the selected menu, submenu or parameter.
	  • Starts the wizard.
	  • If help text is open, closes the help text of the parameter.
	• Pressing the key for 2 s for parameter:
	  If present, opens the help text for the function of the parameter.
	
	With a Wizard
	Opens the editing view of the parameter.
	
	With a text and numeric editor
	• Press the key briefly: confirm your selection.
	• Press the key for 2 s: confirm the entry.

Operating key(s)	Meaning

⊟+⊕	**Escape key combination (press keys simultaneously)**
	
	In a menu, submenu
	• Pressing the key briefly:
	   • Exits the current menu level and takes you to the next higher level.
	   • If help text is open, closes the help text of the parameter.
	• Pressing the key for 2 s returns you to the operational display ("home position").
	
	With a Wizard
	Exits the wizard and takes you to the next higher level.
	
	With a text and numeric editor
	Close the editing view without accepting the changes.

⊟+Ⓔ	**Minus/Enter key combination (press the keys simultaneously)**
	
	• If the keypad lock is active:
	  Press the key for 3 s: deactivate the keypad lock.
	• If the keypad lock is not active:
	  Press the key for 3 s: the context menu opens along with the option for activating the keypad lock.

8.3.5 Opening the context menu

Using the context menu, the user can call up the following menus quickly and directly from the operational display:

• Setup
• Data backup
• Simulation
Calling up and closing the context menu

The user is in the operational display.
1. Press the ⊟ and Ⓔ keys for longer than 3 seconds.
   ↳ The context menu opens.

```
XXXXXXXXXX
              Setup
           Conf.backup
            Simulation
            Keylock on
Ů①                          l/h
```
2. Press ⊟ + ⊞ simultaneously.
   ↳ The context menu is closed and the operational display appears.

Calling up the menu via the context menu

1. Open the context menu.

2. Press ⊞ to navigate to the desired menu.

3. Press Ⓔ to confirm the selection.
   ↳ The selected menu opens.

8.3.6   Navigating and selecting from list

Different operating elements are used to navigate through the operating menu. The navigation path is displayed on the left in the header. Icons are displayed in front of the individual menus. These icons are also shown in the header during navigation.

For an explanation of the navigation view with symbols and operating elements
→ 🖺 64

Example: Setting the number of displayed measured values to "2 values"
A0029562-EN

8.3.7   Calling the parameter directly

A parameter number is assigned to every parameter to be able to access a parameter directly via the onsite display. Entering this access code in the **Direct access** parameter calls up the desired parameter directly.

Navigation path
Expert → Direct access

The direct access code consists of a 5-digit number (at maximum) and the channel number, which identifies the channel of a process variable: e.g. 00914-2. In the navigation view, this appears on the right-hand side in the header of the selected parameter.
1   Direct access code

Note the following when entering the direct access code:
• The leading zeros in the direct access code do not have to be entered.
  Example: Enter **"914"** instead of **"00914"**
• If no channel number is entered, channel 1 is accessed automatically.
  Example: Enter **00914** → **Assign process variable** parameter
• If a different channel is accessed: Enter the direct access code with the corresponding channel number.
  Example: Enter **00914-2** → **Assign process variable** parameter

For the direct access codes of the individual parameters, see the "Description of Device Parameters" document for the device

8.3.8   Calling up help text

Help text is available for some parameters and can be called up from the navigation view. The help text provides a brief explanation of the parameter function and thereby supports swift and safe commissioning.

Calling up and closing the help text

The user is in the navigation view and the selection bar is on a parameter.

1. Press Ⓔ for 2 s.
   ↳ The help text for the selected parameter opens.
⊠ 32   Example: Help text for parameter "Enter access code"

2. Press ⊟ + ⊞ simultaneously.
   ↳ The help text is closed.

8.3.9   Changing the parameters

Parameters can be changed via the numeric editor or text editor.
• Numeric editor: Change values in a parameter, e.g. specifications for limit values.
• Text editor: Enter text in a parameter, e.g. tag name.

A message is displayed if the value entered is outside the permitted value range.

```
Ent. access code
Invalid or out of range input
value
Min:0
Max:9999
```
For a description of the editing view - consisting of the text editor and numeric editor - with symbols → 🖹 66, for a description of the operating elements → 🖹 68

8.3.10 User roles and related access authorization

The two user roles "Operator" and "Maintenance" have different write access to the parameters if the customer defines a user-specific access code. This protects the device configuration via the local display from unauthorized access → 🖹 137.

Defining access authorization for user roles

An access code is not yet defined when the device is delivered from the factory. Access authorization (read and write access) to the device is not restricted and corresponds to the "Maintenance" user role.

▸ Define the access code.
  ↳ The "Operator" user role is redefined in addition to the "Maintenance" user role. Access authorization differs for the two user roles.

Access authorization to parameters: "Maintenance" user role

Access code status	Read access	Write access
An access code has not yet been defined (factory setting).	✔	✔
After an access code has been defined.	✔	✔ 1)

1)   The user only has write access after entering the access code.

Access authorization to parameters: "Operator" user role

Access code status	Read access	Write access
After an access code has been defined.	✔	‒‒ 1)

1)   Despite the defined access code, certain parameters can always be modified and thus are excepted from the write protection, as they do not affect the measurement. Refer to the "Write protection via access code" section

The user role with which the user is currently logged on is indicated by the **Access status** parameter. Navigation path: Operation → Access status

8.3.11 Disabling write protection via access code

If the 🔒-symbol appears on the local display in front of a parameter, the parameter is write-protected by a user-specific access code and its value cannot be changed at the moment using local operation → 🖹 137.

Parameter write protection via local operation can be disabled by entering the user-specific access code in the **Enter access code** parameter (→ 🖹 123) via the respective access option.

1. After you press Ⓔ, the input prompt for the access code appears.

2. Enter the access code.
    ↳ The ⌦-symbol in front of the parameters disappears; all previously write-
       protected parameters are now re-enabled.

8.3.12 Enabling and disabling the keypad lock
The keypad lock makes it possible to block access to the entire operating menu via local
operation. As a result, it is no longer possible to navigate through the operating menu or
change the values of individual parameters. Users can only read the measured values on
the operational display.

The keypad lock is switched on and off via the context menu.

Switching on the keypad lock

The keypad lock is switched on automatically:
  • If the device has not been operated via the display for > 1 minute.
  • Each time the device is restarted.

To activate the keylock manually:

1. The device is in the measured value display.
    Press the ⊟ and ⮒ keys for 3 seconds.
    ↳ A context menu appears.

2. In the context menu select the **Keylock on** option.
    ↳ The keypad lock is switched on.

If the user attempts to access the operating menu while the keypad lock is active, the
Keylock on message appears.

Switching off the keypad lock

▸ The keypad lock is switched on.
   Press the ⊟ and ⮒ keys for 3 seconds.
   ↳ The keypad lock is switched off.

8.4   Access to the operating menu via the Web browser

8.4.1   Function range

Thanks to the integrated Web server, the device can be operated and configured via a Web
browser and via a service interface (CDI-RJ45) or via a WLAN interface. The structure of
the operating menu is the same as for the local display. In addition to the measured values,
status information on the device is also displayed and allows the user to monitor the status
of the device. Furthermore the device data can be managed and the network parameters
can be configured.

A device that has a WLAN interface (can be ordered as an option) is required for the
WLAN connection: order code for "Display; operation", option G "4-line, illuminated; touch
control + WLAN". The device acts as an Access Point and enables communication by
computer or a mobile handheld terminal.

For additional information on the Web server, refer to the Special Documentation for
the device → 🕮 213

8.4.2   Prerequisites

Computer hardware

Hardware	Interface	
	CDI-RJ45	**WLAN**
Interface	The computer must have an RJ45 interface.	The operating unit must have a WLAN interface.
Connection	Standard Ethernet cable with RJ45 connector.	Connection via Wireless LAN.
Screen	Recommended size: ≥12" (depends on the screen resolution)	

Computer software

Software	Interface	
	CDI-RJ45	**WLAN**
Recommended operating systems	• Microsoft Windows 7 or higher. • Mobile operating systems: 　• iOS 　• Android 　[i]　Microsoft Windows XP is supported.	
Web browsers supported	• Microsoft Internet Explorer 8 or higher • Microsoft Edge • Mozilla Firefox • Google Chrome • Safari	

Computer settings

Settings	Interface	
	CDI-RJ45	**WLAN**
User rights	Appropriate user rights (e.g. administrator rights) for TCP/IP and proxy server settings are necessary (for adjusting the IP address, subnet mask etc.).	
Proxy server settings of the Web browser	The Web browser setting *Use a Proxy Server for Your LAN* must be **deselected** .	
JavaScript	JavaScript must be enabled. 　[i]　If JavaScript cannot be enabled: 　enter http://192.168.1.212/basic.html in the address line of the Web browser. A fully functional but simplified version of the operating menu structure starts in the Web browser. 　[i]　When installing a new firmware version: To enable correct data display, clear the temporary memory (cache) of the Web browser under **Internet options**.	
Network connections	Only the active network connections to the measuring device should be used.	
	Switch off all other network connections such as WLAN.	Switch off all other network connections.

[i] In the event of connection problems: → 🖺 154

Measuring device: Via CDI-RJ45 service interface

Device	CDI-RJ45 service interface
Measuring device	The measuring device has an RJ45 interface.
Web server	Web server must be enabled; factory setting: ON For information on enabling the Web server → 🛈 79

Measuring device: via WLAN interface

Device	WLAN interface
Measuring device	The measuring device has a WLAN antenna: • Transmitter with integrated WLAN antenna • Transmitter with external WLAN antenna
Web server	Web server and WLAN must be enabled; factory setting: ON For information on enabling the Web server → 🛈 79

8.4.3   Establishing a connection

Via service interface (CDI-RJ45)

Preparing the measuring device

Proline 500 – digital

1. Loosen the 4 fixing screws on the housing cover.

2. Open the housing cover.

3. The location of the connection socket depends on the measuring device and the communication protocol:
   Connect the computer to the RJ45 connector via the standard Ethernet connecting cable .
Proline 500

1. Depending on the housing version:
   Release the securing clamp or securing screw of the housing cover.

2. Depending on the housing version:
   Unscrew or open the housing cover.

3. The location of the connection socket depends on the measuring device and the communication protocol:
   Connect the computer to the RJ45 connector via the standard Ethernet connecting cable .

Configuring the Internet protocol of the computer

The following information refers to the default Ethernet settings of the device.

IP address of the device: 192.168.1.212 (factory setting)

1. Switch on the measuring device.

2. Connect to the computer using a cable → 🖹 81.

3. If a 2nd network card is not used, close all the applications on the notebook.
   ↳ Applications requiring Internet or a network, such as e-mail, SAP applications, Internet or Windows Explorer.

4. Close any open Internet browsers.

5. Configure the properties of the Internet protocol (TCP/IP) as defined in the table:

IP address	192.168.1.XXX; for XXX all numerical sequences except: 0, 212 and 255 → e.g. 192.168.1.213
Subnet mask	255.255.255.0
Default gateway	192.168.1.212 or leave cells empty

Via WLAN interface

Configuring the Internet protocol of the mobile terminal

NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

▶ Make sure that the WLAN connection is not disconnected while configuring the device.

NOTICE

In principle, avoid simultaneous access to the measuring device via the service interface (CDI-RJ45) and the WLAN interface from the same mobile terminal. This could cause a network conflict.

▶ Only activate one service interface (CDI-RJ45 service interface or WLAN interface).

▶ If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

Preparing the mobile terminal

▶ Enable WLAN reception on the mobile terminal.

Establishing a connection from the mobile terminal to the measuring device

1. In the WLAN settings of the mobile terminal:
   Select the measuring device using the SSID (e.g. EH_Cubemass_500_A802000).

2. If necessary, select the WPA2 encryption method.

3. Enter the password: serial number of the measuring device ex-works (e.g. L100A802000).
   ↳ LED on display module flashes: it is now possible to operate the measuring device with the Web browser, FieldCare or DeviceCare.

ℹ The serial number can be found on the nameplate.

ℹ To ensure the safe and swift assignment of the WLAN network to the measuring point, it is advisable to change the SSID name. It should be possible to clearly assign the new SSID name to the measuring point (e.g. tag name) because it is displayed as the WLAN network.

Disconnecting

▶ After configuring the device:
   Terminate the WLAN connection between the operating unit and measuring device.

Starting the Web browser

1. Start the Web browser on the computer.

2. Enter the IP address of the Web server in the address line of the Web browser: 192.168.1.212
   ↳ The login page appears.
1 Picture of device
2 Device name
3 Device tag (→ 🖹 95)
4 Status signal
5 Current measured values
6 Operating language
7 User role
8 Access code
9 Login
10 Reset access code (→ 🖹 134)

If a login page does not appear, or if the page is incomplete → 🖹 154

8.4.4 Logging on

1. Select the preferred operating language for the Web browser.

2. Enter the user-specific access code.

3. Press **OK** to confirm your entry.

Access code	0000 (factory setting); can be changed by customer

If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

8.4.5   User interface
1   Function row
2   Local display language
3   Navigation area

Header

The following information appears in the header:
- Device name
- Device tag
- Device status with status signal → 🔲 162
- Current measured values

Function row

Functions	Meaning
Measured values	Displays the measured values of the measuring device
Menu	• Access to the operating menu from the measuring device • The structure of the operating menu is the same as for the local display 📖 For detailed information on the structure of the operating menu, see the Operating Instructions for the measuring device
Device status	Displays the diagnostic messages currently pending, listed in order of priority

Data management	Data exchange between PC and measuring device:
	• Device configuration:
	   • Load settings from the device
	     (XML format, save configuration)
	   • Save settings to the device
	     (XML format, restore configuration)
	• Logbook - Export Event logbook (.csv file)
	• Documents - Export documents:
	   • Export backup data record
	     (.csv file, create documentation of the measuring point configuration)
	   • Verification report
	     (PDF file, only available with the "Heartbeat Verification" application package)
	• Firmware update - Flashing a firmware version

Network configuration	Configuration and checking of all the parameters required for establishing the connection to the measuring device: • Network settings (e.g. IP address, MAC address) • Device information (e.g. serial number, firmware version)
Logout	End the operation and call up the login page

Navigation area

If a function is selected in the function bar, the submenus of the function open in the navigation area. The user can now navigate through the menu structure.

Working area

Depending on the selected function and the related submenus, various actions can be performed in this area:
- Configuring parameters
- Reading measured values
- Calling up help text
- Starting an upload/download

8.4.6 Disabling the Web server

The Web server of the measuring device can be switched on and off as required using the **Web server functionality** parameter.

Navigation
"Expert" menu → Communication → Web server

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Web server functionality	Switch the Web server on and off.	• Off • HTML Off • On	On

Function scope of the "Web server functionality" parameter

Option	Description
Off	• The web server is completely disabled. • Port 80 is locked.
On	• The complete functionality of the web server is available. • JavaScript is used. • The password is transferred in an encrypted state. • Any change to the password is also transferred in an encrypted state.

Enabling the Web server

If the Web server is disabled it can only be re-enabled with the **Web server functionality** parameter via the following operating options:
- Via local display
- Via Bedientool "FieldCare"
- Via "DeviceCare" operating tool

8.4.7 Logging out

ℹ️ Before logging out, perform a data backup via the **Data management** function (upload configuration from device) if necessary.

1. Select the **Logout** entry in the function row.
   ↳ The home page with the Login box appears.

2. Close the Web browser.

3. If no longer needed:
   Reset modified properties of the Internet protocol (TCP/IP) → 🖺 75.

8.5 Access to the operating menu via the operating tool

The structure of the operating menu in the operating tools is the same as for operation via the local display.

8.5.1 Connecting the operating tool

Via HART protocol

This communication interface is available in device versions with a HART output.
🖾 *33 Options for remote operation via HART protocol (active)*

1 Control system (e.g. PLC)
2 Field Communicator 475
3 Computer with Web browser (e.g. Internet Explorer) for access to the integrated device Web server or computer with an operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
4 Commubox FXA195 (USB)
5 Field Xpert SFX350 or SFX370
6 Field Xpert SMT70
7 VIATOR Bluetooth modem with connecting cable
8 Transmitter
34   Options for remote operation via HART protocol (passive)

1   *Control system (e.g. PLC)*
2   *Transmitter power supply unit, e.g. RN221N (with communication resistor)*
3   *Connection for Commubox FXA195 and Field Communicator 475*
4   *Field Communicator 475*
5   *Computer with Web browser (e.g. Internet Explorer) for access to the integrated device Web server or computer with an operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"*
6   *Commubox FXA195 (USB)*
7   *Field Xpert SFX350 or SFX370*
8   *Field Xpert SMT70*
9   *VIATOR Bluetooth modem with connecting cable*
10   *Transmitter*

Service interface

Via service interface (CDI-RJ45)

A point-to-point connection can be established to configure the device onsite. With the housing open, the connection is established directly via the service interface (CDI-RJ45) of the device.

An adapter for RJ45 and the M12 connector is optionally available:
Order code for "Accessories", option **NB**: "Adapter RJ45 M12 (service interface)"

The adapter connects the service interface (CDI-RJ45) to an M12 connector mounted in the cable entry. Therefore the connection to the service interface can be established via an M12 connector without opening the device.

Proline 500 – digital transmitter
35   Connection via service interface (CDI-RJ45)

1   *Computer with Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with "FieldCare", "DeviceCare" operating tool with COM DTM "CDI Communication TCP/IP"*
2   *Standard Ethernet connecting cable with RJ45 connector*
3   *Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server*

Proline 500 transmitter
⊠ 36   Connection via service interface (CDI-RJ45)

1   Computer with Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with "FieldCare", "DeviceCare" operating tool with COM DTM "CDI Communication TCP/IP"
2   Standard Ethernet connecting cable with RJ45 connector
3   Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server

Via WLAN interface

The optional WLAN interface is available on the following device version:
Order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN"
1   Transmitter with integrated WLAN antenna
2   Transmitter with external WLAN antenna
3   LED lit constantly: WLAN reception is enabled on measuring device
4   LED flashing: WLAN connection established between operating unit and measuring device
5   Computer with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with operating tool (e.g. FieldCare, DeviceCare)
6   Mobile handheld terminal with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or operating tool (e.g. FieldCare, DeviceCare)
7   Smart phone or tablet (e.g. Field Xpert SMT70)

Function	WLAN: IEEE 802.11 b/g (2.4 GHz)
Encryption	WPA2-PSK AES-128 (in accordance with IEEE 802.11i)
Configurable WLAN channels	1 to 11
Degree of protection	IP67
Available antennas	• Internal antenna • External antenna (optional) In the event of poor transmission/reception conditions at the place of installation. ℹ Only one antenna active in each case!
Range	• Internal antenna: typically 10 m (32 ft) • External antenna: typically 50 m (164 ft)
Materials (external antenna)	• Antenna: ASA plastic (acrylic ester-styrene-acrylonitrile) and nickel-plated brass • Adapter: Stainless steel and nickel-plated brass • Cable: Polyethylene • Connector: Nickel-plated brass • Angle bracket: Stainless steel

Configuring the Internet protocol of the mobile terminal

NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

▶ Make sure that the WLAN connection is not disconnected while configuring the device.

NOTICE

In principle, avoid simultaneous access to the measuring device via the service interface (CDI-RJ45) and the WLAN interface from the same mobile terminal. This could cause a network conflict.

▶ Only activate one service interface (CDI-RJ45 service interface or WLAN interface).

▶ If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

Preparing the mobile terminal

▶ Enable WLAN reception on the mobile terminal.

Establishing a connection from the mobile terminal to the measuring device

1. In the WLAN settings of the mobile terminal:
   Select the measuring device using the SSID (e.g. EH_Cubemass_500_A802000).

2. If necessary, select the WPA2 encryption method.

3. Enter the password: serial number of the measuring device ex-works (e.g. L100A802000).
   ↳ LED on display module flashes: it is now possible to operate the measuring device with the Web browser, FieldCare or DeviceCare.

ℹ The serial number can be found on the nameplate.

ℹ To ensure the safe and swift assignment of the WLAN network to the measuring point, it is advisable to change the SSID name. It should be possible to clearly assign the new SSID name to the measuring point (e.g. tag name) because it is displayed as the WLAN network.

Disconnecting

▶ After configuring the device:
   Terminate the WLAN connection between the operating unit and measuring device.

8.5.2 Field Xpert SFX350, SFX370

Function range

Field Xpert SFX350 and Field Xpert SFX370 are mobile computers for commissioning and maintenance. They enable efficient device configuration and diagnostics for HART and FOUNDATION Fieldbus devices in the **non-hazardous area** (SFX350, SFX370) and **hazardous area** (SFX370).

For details, see Operating Instructions BA01202S

Source for device description files

See information → 🖹 87

8.5.3 FieldCare

Function scope

FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field devices in a system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

Access is via:
- HART protocol
- CDI-RJ45 service interface → 🖹 81
- WLAN interface→ 🖹 82

Typical functions:
- Configuring parameters of transmitters
- Loading and saving device data (upload/download)
- Documentation of the measuring point
- Visualization of the measured value memory (line recorder) and event logbook

For additional information about FieldCare, see Operating Instructions BA00027S and BA00059S

Source for device description files

See information → 🖹 87

Establishing a connection

1. Start FieldCare and launch the project.

2. In the network: Add a device.
   ↳ The **Add device** window opens.

3. Select the **CDI Communication TCP/IP** option from the list and press **OK** to confirm.

4. Right-click **CDI Communication TCP/IP** and select the **Add device** option in the context menu that opens.

5. Select the desired device from the list and press **OK** to confirm.
   ↳ The **CDI Communication TCP/IP (Configuration)** window opens.

6. Enter the device address in the **IP address** field: 192.168.1.212 and press **Enter** to confirm.

7. Establish the online connection to the device.

For additional information, see Operating Instructions BA00027S and BA00059S

8.5.4 DeviceCare

Function scope

Tool to connect and configure Endress+Hauser field devices.

The fastest way to configure Endress+Hauser field devices is with the dedicated "DeviceCare" tool. Together with the device type managers (DTMs) it presents a convenient, comprehensive solution.

For details, see Innovation Brochure IN01047S

Source for device description files

See information → 🗎 87

8.5.5 AMS Device Manager

Function scope

Program from Emerson Process Management for operating and configuring measuring devices via HART protocol.

Source for device description files

See data → 🖺 87

8.5.6 SIMATIC PDM

Function scope

SIMATIC PDM is a standardized, manufacturer-independent program from Siemens for the operation, configuration, maintenance and diagnosis of intelligent field devices via HART protocol.

Source for device description files

See data → 🖺 87

8.5.7 Field Communicator 475

Function scope

Industrial handheld terminal from Emerson Process Management for remote configuration and measured value display via HART protocol.

Source for device description files

See data → 🖺 87

9 System integration

9.1 Overview of device description files

9.1.1 Current version data for the device

Firmware version	01.05.zz	• On the title page of the Operating Instructions • On the transmitter nameplate • Firmware version Diagnostics → Device information → Firmware version
Release date of firmware version	08.2019	---
Manufacturer ID	0x11	Manufacturer ID Diagnostics → Device information → Manufacturer ID
Device type ID	0x3B	Device type Diagnostics → Device information → Device type
HART protocol revision	7	---
Device revision	1	• On the transmitter nameplate • Device revision Diagnostics → Device information → Device revision

For an overview of the different firmware versions for the device → 🖹 176

9.1.2 Operating tools

The suitable device description file for the individual operating tools is listed in the table below, along with information on where the file can be acquired.

Operating tool via HART protocol	Sources for obtaining device descriptions
FieldCare	• www.endress.com → Download Area • CD–ROM (contact Endress+Hauser) • DVD (contact Endress+Hauser)
DeviceCare	• www.endress.com → Download Area • CD–ROM (contact Endress+Hauser) • DVD (contact Endress+Hauser)
• Field Xpert SFX350 • Field Xpert SFX370	Use update function of handheld terminal
AMS Device Manager (Emerson Process Management)	www.endress.com → Download Area
SIMATIC PDM (Siemens)	www.endress.com → Download Area
Field Communicator 475 (Emerson Process Management)	Use update function of handheld terminal

9.2   Measured variables via HART protocol

The following measured variables (HART device variables) are assigned to the dynamic variables at the factory:

Dynamic variables	Measured variables (HART device variables)
Primary dynamic variable (PV)	Mass flow
Secondary dynamic variable (SV)	Totalizer 1
Tertiary dynamic variable (TV)	Density
Quaternary dynamic variable (QV)	Temperature

The assignment of the measured variables to the dynamic variables can be modified and assigned as desired via local operation and the operating tool using the following parameters:

- Expert → Communication → HART output → Output → Assign PV
- Expert → Communication → HART output → Output → Assign SV
- Expert → Communication → HART output → Output → Assign TV
- Expert → Communication → HART output → Output → Assign QV

The following measured variables can be assigned to the dynamic variables:

Measured variables for PV (primary dynamic variable)
- Measured variables which are generally available:
  - Mass flow
  - Volume flow
  - Corrected volume flow
  - Density
  - Reference density
  - Temperature
  - Electronic temperature
  - Oscillation frequency 0
  - Frequency fluctuation 0
  - Oscillation damping 0
  - Oscillation damping fluctuation 0
  - Signal asymmetry
  - Exciter current 0
  - Pressure [1]
- Additional measured variables with the Heartbeat Verification + Monitoring application package:
  - Carrier pipe temperature [1]
  - Oscillation frequency 1
  - Oscillation amplitude
  - Oscillation amplitude 1
  - Frequency fluctuation 1
  - Oscillation damping 1
  - Oscillation damping fluctuation 1
  - Exciter current 1
  - HBSI
- Additional measured variables with the Concentration application package:
  - Concentration
  - Target mass flow
  - Carrier mass flow
  - Target volume flow
  - Carrier volume flow
  - Target corrected volume flow
  - Carrier corrected volume flow

---

1)   Visible depending on the order options or device settings

Measured variables for SV, TV, QV (secondary, tertiary and quaternary dynamic variable)
- Measured variables which are always available:
  - Mass flow
  - Volume flow
  - Corrected volume flow
  - Density
  - Reference density
  - Temperature
  - Electronic temperature
  - Totalizer 1
  - Totalizer 2
  - Totalizer 3
- Additional measured variables with the Heartbeat Verification + Monitoring application package:
  - Carrier pipe temperature
  - HBSI
- Additional measured variables with the Concentration application package:
  - Concentration
  - Target mass flow
  - Carrier mass flow
  - Target volume flow
  - Carrier volume flow
  - Target corrected volume flow
  - Carrier corrected volume flow

9.2.1 Device variables

Device variables are permanently assigned. A maximum of eight device variables can be transmitted.

Assignment	Device variables
0	Mass flow
1	Volume flow
2	Corrected volume flow
3	Density
4	Reference density
5	Temperature
6	Totalizer 1
7	Totalizer 2
8	Totalizer 3
13	Target mass flow [1]
14	Carrier mass flow [1]
15	Concentration [1]

1)   Visible depending on the order options or device settings

9.3   Other settings

Burst mode functionality in accordance with HART 7 Specification:

Navigation
"Expert" menu → Communication → HART output → Burst configuration → Burst configuration 1 to n

▸ Burst configuration	
▸ Burst configuration 1 to n

Burst trigger level	→ 🖹 92
Min. update period	→ 🖹 92
Max. update period	→ 🖹 92

Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Burst mode 1 to n	Activate the HART burst mode for burst message X.	• Off • On	Off
Burst command 1 to n	Select the HART command that is sent to the HART master.	• Command 1 • Command 2 • Command 3 • Command 9 • Command 33 • Command 48	Command 2

Parameter	Description	Selection / User entry	Factory setting
Burst variable 0	For HART command 9 and 33: select the HART device variable or the process variable.	• Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Density • Reference density * • Concentration * • Temperature • Totalizer 1 • Totalizer 2 • Totalizer 3 • HBSI * • HART input • Percent of range • Measured current • Primary variable (PV) • Secondary variable (SV) • Tertiary variable (TV) • Quaternary variable (QV) • Not used • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow *	Volume flow
Burst variable 1	For HART command 9 and 33: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 2	For HART command 9 and 33: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 3	For HART command 9 and 33: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 4	For HART command 9: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 5	For HART command 9: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 6	For HART command 9: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst variable 7	For HART command 9: select the HART device variable or the process variable.	See the **Burst variable 0** parameter.	Not used
Burst trigger mode	Select the event that triggers burst message X.	• Continuous • Window * • Rising * • Falling * • On change	Continuous
Burst trigger level	Enter the burst trigger value. Together with the option selected in the **Burst trigger mode** parameter the burst trigger value determines the time of burst message X.	Signed floating-point number	–
Min. update period	Enter the minimum time span between two burst commands of burst message X.	Positive integer	1 000 ms
Max. update period	Enter the maximum time span between two burst commands of burst message X.	Positive integer	2 000 ms

* Visibility depends on order options or device settings

10   Commissioning

10.1   Function check

Before commissioning the measuring device:

▶ Make sure that the post-installation and post-connection checks have been performed.

- "Post-installation check" checklist→ 📄 35
- "Post-connection check" checklist → 📄 59

10.2   Switching on the measuring device

▶ After a successful function check, switch on the measuring device.
  ↳ After a successful startup, the local display switches automatically from the startup display to the operational display.

> If nothing appears on the local display or a diagnostic message is displayed, refer to the section on "Diagnostics and troubleshooting" → 📄 153.

10.3   Setting the operating language

Factory setting: English or ordered local language
🖼 *37   Taking the example of the local display*

10.4   Configuring the measuring device

- The **Setup** menu with its guided wizards contains all the parameters needed for standard operation.
- Navigation to the **Setup** menu
A0032222-EN

🖂 *38   Taking the example of the local display*

ℹ The number of submenus and parameters can vary depending on the device version. Certain submenus and parameters in these submenus are not described in the Operation Instructions. Instead a description is provided in the Special Documentation for the device (→ "Supplementary documentation" section).

Pressure value	→ 🕮 99
External pressure	→ 🕮 99

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Select medium	–	Select medium type.	• Liquid • Gas	Liquid
Select gas type	The **Gas** option is selected in the **Select medium** parameter.	Select measured gas type.	• Air • Ammonia NH3 • Argon Ar • Sulfur hexafluoride SF6 • Oxygen O2 • Ozone O3 • Nitrogen oxide NOx • Nitrogen N2 • Nitrous oxide N2O • Methane CH4 • Hydrogen H2 • Helium He • Hydrogen chloride HCl • Hydrogen sulfide H2S • Ethylene C2H4 • Carbon dioxide CO2 • Carbon monoxide CO • Chlorine Cl2 • Butane C4H10 • Propane C3H8 • Propylene C3H6 • Ethane C2H6 • Others	Methane CH4
Reference sound velocity	In the **Select gas type** parameter, the **Others** option is selected.	Enter sound velocity of gas at 0 ℃ (32 ℉).	1 to 99 999.9999 m/s	415.0 m/s
Temperature coefficient sound velocity	The **Others** option is selected in the **Select gas type** parameter.	Enter temperature coefficient for the gas sound velocity.	Positive floating-point number	0 (m/s)/K
Pressure compensation	–	Select pressure compensation type.	• Off • Fixed value • External value [*] • Current input 1 [*] • Current input 2 [*] • Current input 3 [*]	Off
Pressure value	The **Fixed value** option or the **Current input 1…n** option is selected in the **Pressure compensation** parameter.	Enter process pressure to be used for pressure correction.	Positive floating-point number	1.01325 bar
External pressure	The **Fixed value** option or the **Current input 1…n** option is selected in the **Pressure compensation** parameter.	Shows the external process pressure value.	Positive floating-point number	1.01325 bar

10.4.4   Displaying the I/O configuration

The **I/O configuration** submenu guides the user systematically through all the parameters in which the configuration of the I/O modules is displayed.

Navigation

"Setup" menu → I/O configuration

```
▶ I/O configuration

                    I/O module 1 to n terminal numbers              →  🖺 100

                    I/O module 1 to n information                   →  🖺 100

                    I/O module 1 to n type                          →  🖺 100

                    Apply I/O configuration                         →  🖺 100

                    I/O alteration code                             →  🖺 100
```

Parameter overview with brief description

Parameter	Description	User interface / Selection / User entry	Factory setting
I/O module 1 to n terminal numbers	Shows the terminal numbers used by the I/O module.	• Not used • 26-27 (I/O 1) • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
I/O module 1 to n information	Shows information of the plugged I/O module.	• Not plugged • Invalid • Not configurable • Configurable • HART	–
I/O module 1 to n type	Shows the I/O module type.	• Off • Current output * • Current input * • Status input * • Pulse/frequency/switch output * • Double pulse output * • Relay output *	Off
Apply I/O configuration	Apply parameterization of the freely configurable I/O module.	• No • Yes	No
I/O alteration code	Enter the code in order to change the I/O configuration.	Positive integer	0

*   Visibility depends on order options or device settings

10.4.5   Configuring the current input

The **"Current input" wizard** guides the user systematically through all the parameters that have to be set for configuring the current input.

Navigation
"Setup" menu → Current input

▸ Current input 1 to n	
Terminal number	→ 🖺 101
Signal mode	→ 🖺 101
0/4 mA value	→ 🖺 101
20 mA value	→ 🖺 101
Current span	→ 🖺 101
Failure mode	→ 🖺 101
Failure value	→ 🖺 101

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Terminal number	–	Shows the terminal numbers used by the current input module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
Signal mode	The measuring device is **not** approved for use in the hazardous area with type of protection Ex-i.	Select the signal mode for the current input.	• Passive • Active *	Active
0/4 mA value	–	Enter 4 mA value.	Signed floating-point number	0
20 mA value	–	Enter 20 mA value.	Signed floating-point number	Depends on country and nominal diameter
Current span	–	Select current range for process value output and upper/lower level for alarm signal.	• 4...20 mA (4...20.5 mA) • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 0...20 mA (0...20.5 mA)	Country-specific: • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA)
Failure mode	–	Define input behavior in alarm condition.	• Alarm • Last valid value • Defined value	Alarm
Failure value	In the **Failure mode** parameter, the **Defined value** option is selected.	Enter value to be used by the device if input value from external device is missing.	Signed floating-point number	0

*   Visibility depends on order options or device settings

10.4.6   Configuring the status input

The **Status input** submenu guides the user systematically through all the parameters that have to be set for configuring the status input.

Navigation

"Setup" menu → Status input

▶ Status input 1 to n		
Assign status input	→ 🖹 102	
Terminal number	→ 🖹 102	
Active level	→ 🖹 102	
Terminal number	→ 🖹 102	
Response time status input	→ 🖹 102	
Terminal number	→ 🖹 102	

Parameter overview with brief description

Parameter	Description	User interface / Selection / User entry	Factory setting
Terminal number	Shows the terminal numbers used by the status input module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
Assign status input	Select function for the status input.	• Off • Reset totalizer 1 • Reset totalizer 2 • Reset totalizer 3 • Reset all totalizers • Flow override • Zero point adjustment	Off
Active level	Define input signal level at which the assigned function is triggered.	• High • Low	High
Response time status input	Define the minimum amount of time the input signal level must be present before the selected function is triggered.	5 to 200 ms	50 ms

*   Visibility depends on order options or device settings

10.4.7   Configuring the current output

The **Current output** wizard guides you systematically through all the parameters that have to be set for configuring the current output.
▶ Current output 1 to n		
	Terminal number	→ 🖹 103
	Signal mode	→ 🖹 103
	Assign current output 1 to n	→ 🖹 104
	Current span	→ 🖹 104
	0/4 mA value	→ 🖹 104
	20 mA value	→ 🖹 105
	Fixed current	→ 🖹 105
	Damping output 1 to n	→ 🖹 105
	Failure mode	→ 🖹 105
	Failure current	→ 🖹 105

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Terminal number	–	Shows the terminal numbers used by the current output module.	• Not used • 26-27 (I/O 1) • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) [*]	–
Signal mode	–	Select the signal mode for the current output.	• Active [*] • Passive [*]	Active

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Assign current output 1 to n	–	Select process variable for current output.	• Off * • Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow * • Density • Reference density * • Concentration * • Temperature • Carrier pipe temperature * • Electronic temperature • Oscillation frequency 0 • Oscillation amplitude 0 * • Frequency fluctuation 0 * • Oscillation damping 0 * • Oscillation damping fluctuation 0 * • Signal asymmetry * • Exciter current 0 * • HBSI * • Pressure * • Application specific output 0 * • Application specific output 1 * • Index inhomogeneous medium • Index suspended bubbles *	Mass flow
Current span	–	Select current range for process value output and upper/lower level for alarm signal.	• 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 4...20 mA (4... 20.5 mA) • 0...20 mA (0... 20.5 mA) • Fixed current	Country-specific: • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA)
0/4 mA value	In the **Current span** parameter (→ 🗎 104), one of the following options is selected: • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 4...20 mA (4... 20.5 mA) • 0...20 mA (0... 20.5 mA)	Enter 4 mA value.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
20 mA value	One of the following options is selected in the **Current span** parameter (→ 🖺 104): • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 4...20 mA (4... 20.5 mA) • 0...20 mA (0... 20.5 mA)	Enter 20 mA value.	Signed floating-point number	Depends on country and nominal diameter
Fixed current	The **Fixed current** option is selected in the **Current span** parameter (→ 🖺 104).	Defines the fixed output current.	0 to 22.5 mA	22.5 mA
Damping output 1 to n	A process variable is selected in the **Assign current output** parameter (→ 🖺 104) and one of the following options is selected in the **Current span** parameter (→ 🖺 104): • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 4...20 mA (4... 20.5 mA) • 0...20 mA (0... 20.5 mA)	Set reaction time for output signal to fluctuations in the measured value.	0.0 to 999.9 s	1.0 s
Failure mode	A process variable is selected in the **Assign current output** parameter (→ 🖺 104) and one of the following options is selected in the **Current span** parameter (→ 🖺 104): • 4...20 mA NAMUR (3.8...20.5 mA) • 4...20 mA US (3.9...20.8 mA) • 4...20 mA (4... 20.5 mA) • 0...20 mA (0... 20.5 mA)	Define output behavior in alarm condition.	• Min. • Max. • Last valid value • Actual value • Defined value	Max.
Failure current	The **Defined value** option is selected in the **Failure mode** parameter.	Enter current output value in alarm condition.	0 to 22.5 mA	22.5 mA

* Visibility depends on order options or device settings

10.4.8 Configuring the pulse/frequency/switch output

The **Pulse/frequency/switch output** wizard guides you systematically through all the parameters that can be set for configuring the selected output type.
Navigation

"Setup" menu → Advanced setup → Pulse/frequency/switch output
▶ Pulse/frequency/switch output 1 to n	
Operating mode	→ 🗎 106

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Operating mode	Define the output as a pulse, frequency or switch output.	• Pulse • Frequency • Switch	Pulse
Configuring the pulse output

Navigation

"Setup" menu → Pulse/frequency/switch output

▶ Pulse/frequency/switch output 1 to n	
Operating mode	→ 🗎 107
Terminal number	→ 🗎 107
Signal mode	→ 🗎 107
Assign pulse output	→ 🗎 107
Value per pulse	→ 🗎 107
Pulse width	→ 🗎 107
Failure mode	→ 🗎 107
Invert output signal	→ 🗎 107

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Operating mode	–	Define the output as a pulse, frequency or switch output.	• Pulse • Frequency • Switch	Pulse
Terminal number	–	Shows the terminal numbers used by the PFS output module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
Signal mode	–	Select the signal mode for the PFS output.	• Passive • Active • Passive NAMUR	Passive
Assign pulse output 1 to n	The **Pulse** option is selected in the **Operating mode** parameter parameter.	Select process variable for pulse output.	• Off • Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow *	Off
Pulse scaling	The **Pulse** option is selected in the **Operating mode** parameter (→ 🕮 106) and a process variable is selected in the **Assign pulse output** parameter (→ 🕮 107).	Enter quantity for measured value at which a pulse is output.	Positive floating point number	Depends on country and nominal diameter
Pulse width	The **Pulse** option is selected in the **Operating mode** parameter (→ 🕮 106) and a process variable is selected in the **Assign pulse output** parameter (→ 🕮 107).	Define time width of the output pulse.	0.05 to 2 000 ms	100 ms
Failure mode	The **Pulse** option is selected in the **Operating mode** parameter (→ 🕮 106) and a process variable is selected in the **Assign pulse output** parameter (→ 🕮 107).	Define output behavior in alarm condition.	• Actual value • No pulses	No pulses
Invert output signal	–	Invert the output signal.	• No • Yes	No

* Visibility depends on order options or device settings

Configuring the frequency output

Navigation
"Setup" menu → Pulse/frequency/switch output

▶ Pulse/frequency/switch output 1 to n	
Operating mode	→ 🖺 108
Terminal number	→ 🖺 108
Signal mode	→ 🖺 108
Assign frequency output	→ 🖺 109
Minimum frequency value	→ 🖺 109
Maximum frequency value	→ 🖺 109
Measuring value at minimum frequency	→ 🖺 110
Measuring value at maximum frequency	→ 🖺 110
Failure mode	→ 🖺 110
Failure frequency	→ 🖺 110
Invert output signal	→ 🖺 110

Parameter overview with brief description

| Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Operating mode	–	Define the output as a pulse, frequency or switch output.	• Pulse • Frequency • Switch	Pulse
Terminal number	–	Shows the terminal numbers used by the PFS output module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
Signal mode	–	Select the signal mode for the PFS output.	• Passive • Active • Passive NAMUR	Passive

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Assign frequency output	The **Frequency** option is selected in the **Operating mode** parameter (→ 🖺 106).	Select process variable for frequency output.	• Off • Mass flow • Volume flow • Corrected volume flow • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow * • Density • Reference density • Concentration * • Temperature • Carrier pipe temperature * • Electronic temperature • Oscillation frequency 0 • Oscillation amplitude 0 * • Frequency fluctuation 0 * • Oscillation damping 0 * • Oscillation damping fluctuation 0 * • Signal asymmetry * • Exciter current 0 * • HBSI * • Pressure • Application specific output 0 * • Application specific output 1 * • Index inhomogeneous medium • Index suspended bubbles *	Off
Minimum frequency value	The **Frequency** option is selected in the **Operating mode** parameter (→ 🖺 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🖺 109).	Enter minimum frequency.	0.0 to 10 000.0 Hz	0.0 Hz
Maximum frequency value	The **Frequency** option is selected in the **Operating mode** parameter (→ 🖺 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🖺 109).	Enter maximum frequency.	0.0 to 10 000.0 Hz	10 000.0 Hz

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Measuring value at minimum frequency	The **Frequency** option is selected in the **Operating mode** parameter (→ 🗎 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🗎 109).	Enter measured value for minmum frequency.	Signed floating-point number	Depends on country and nominal diameter
Measuring value at maximum frequency	The **Frequency** option is selected in the **Operating mode** parameter (→ 🗎 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🗎 109).	Enter measured value for maximum frequency.	Signed floating-point number	Depends on country and nominal diameter
Failure mode	The **Frequency** option is selected in the **Operating mode** parameter (→ 🗎 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🗎 109).	Define output behavior in alarm condition.	• Actual value • Defined value • 0 Hz	0 Hz
Failure frequency	The **Frequency** option is selected in the **Operating mode** parameter (→ 🗎 106) and a process variable is selected in the **Assign frequency output** parameter (→ 🗎 109).	Enter frequency output value in alarm condition.	0.0 to 12 500.0 Hz	0.0 Hz
Invert output signal	–	Invert the output signal.	• No • Yes	No

*   Visibility depends on order options or device settings

Configuring the switch output

	Switch-on delay	→ 🖺 113
	Switch-off delay	→ 🖺 113
	Failure mode	→ 🖺 113
	Invert output signal	→ 🖺 113

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Operating mode	–	Define the output as a pulse, frequency or switch output.	• Pulse • Frequency • Switch	Pulse
Terminal number	–	Shows the terminal numbers used by the PFS output module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4) *	–
Signal mode	–	Select the signal mode for the PFS output.	• Passive • Active • Passive NAMUR	Passive

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Switch output function	The **Switch** option is selected in the **Operating mode** parameter.	Select function for switch output.	▪ Off ▪ On ▪ Diagnostic behavior ▪ Limit ▪ Flow direction check ▪ Status	Off
Assign diagnostic behavior	▪ In the **Operating mode** parameter, the **Switch** option is selected. ▪ In the **Switch output function** parameter, the **Diagnostic behavior** option is selected.	Select diagnostic behavior for switch output.	▪ Alarm ▪ Alarm or warning ▪ Warning	Alarm
Assign limit	▪ The **Switch** option is selected in the **Operating mode** parameter. ▪ The **Limit** option is selected in the **Switch output function** parameter.	Select process variable for limit function.	▪ Mass flow ▪ Volume flow ▪ Corrected volume flow * ▪ Target mass flow * ▪ Carrier mass flow * ▪ Target volume flow * ▪ Carrier volume flow * ▪ Target corrected volume flow * ▪ Carrier corrected volume flow * ▪ Density ▪ Reference density * ▪ Concentration * ▪ Temperature ▪ Totalizer 1 ▪ Totalizer 2 ▪ Totalizer 3 ▪ Oscillation damping ▪ Pressure ▪ Application specific output 0 * ▪ Application specific output 1 * ▪ Index inhomogeneous medium ▪ Index suspended bubbles *	Mass flow
Assign flow direction check	▪ The **Switch** option is selected in the **Operating mode** parameter. ▪ The **Flow direction check** option is selected in the **Switch output function** parameter.	Select process variable for flow direction monitoring.	▪ Off ▪ Volume flow ▪ Mass flow ▪ Corrected volume flow *	Mass flow
Assign status	▪ The **Switch** option is selected in the **Operating mode** parameter. ▪ The **Status** option is selected in the **Switch output function** parameter.	Select device status for switch output.	▪ Partially filled pipe detection ▪ Low flow cut off	Partially filled pipe detection

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Switch-on value	• The **Switch** option is selected in the **Operating mode** parameter. • The **Limit** option is selected in the **Switch output function** parameter.	Enter measured value for the switch-on point.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
Switch-off value	• The **Switch** option is selected in the **Operating mode** parameter. • The **Limit** option is selected in the **Switch output function** parameter.	Enter measured value for the switch-off point.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
Switch-on delay	• The **Switch** option is selected in the **Operating mode** parameter. • The **Limit** option is selected in the **Switch output function** parameter.	Define delay for the switch-on of status output.	0.0 to 100.0 s	0.0 s
Switch-off delay	• The **Switch** option is selected in the **Operating mode** parameter. • The **Limit** option is selected in the **Switch output function** parameter.	Define delay for the switch-off of status output.	0.0 to 100.0 s	0.0 s
Failure mode	–	Define output behavior in alarm condition.	• Actual status • Open • Closed	Open
Invert output signal	–	Invert the output signal.	• No • Yes	No

*   Visibility depends on order options or device settings

10.4.9   Configuring the relay output

The **Relay output** wizard guides the user systematically through all the parameters that have to be set for configuring the relay output.

Navigation
"Setup" menu → Relay output 1 to n

‣ RelaisOutput 1 to n

Switch output function	→ 🗎 114
Assign flow direction check	→ 🗎 114
Assign limit	→ 🗎 114
Assign diagnostic behavior	→ 🗎 114
Assign status	→ 🗎 115
Switch-off value	→ 🗎 115

Switch-on value	→ 🖹 115
Failure mode	→ 🖹 115

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Relay output function	–	Select the function for the relay output.	• Closed • Open • Diagnostic behavior • Limit • Flow direction check • Digital Output	Closed
Terminal number	–	Shows the terminal numbers used by the relay output module.	• Not used • 24-25 (I/O 2) • 22-23 (I/O 3) • 20-21 (I/O 4)	–
Assign flow direction check	In the **Relay output function** parameter, the **Flow direction check** option is selected.	Select process variable for flow direction monitoring.	• Off • Volume flow • Mass flow • Corrected volume flow *	Mass flow
Assign limit	The **Limit** option is selected in the **Relay output function** parameter.	Select process variable for limit function.	• Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow * • Density • Reference density * • Concentration * • Temperature • Totalizer 1 • Totalizer 2 • Totalizer 3 • Oscillation damping • Pressure • Application specific output 0 * • Application specific output 1 * • Index inhomogeneous medium • Index suspended bubbles *	Mass flow
Assign diagnostic behavior	In the **Relay output function** parameter, the **Diagnostic behavior** option is selected.	Select diagnostic behavior for switch output.	• Alarm • Alarm or warning • Warning	Alarm

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Assign status	In the **Relay output function** parameter, the **Digital Output** option is selected.	Select device status for switch output.	• Partially filled pipe detection • Low flow cut off	Partially filled pipe detection
Switch-off value	In the **Relay output function** parameter, the **Limit** option is selected.	Enter measured value for the switch-off point.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
Switch-off delay	In the **Relay output function** parameter, the **Limit** option is selected.	Define delay for the switch-off of status output.	0.0 to 100.0 s	0.0 s
Switch-on value	The **Limit** option is selected in the **Relay output function** parameter.	Enter measured value for the switch-on point.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
Switch-on delay	In the **Relay output function** parameter, the **Limit** option is selected.	Define delay for the switch-on of status output.	0.0 to 100.0 s	0.0 s
Failure mode	–	Define output behavior in alarm condition.	• Actual status • Open • Closed	Open

*   Visibility depends on order options or device settings

10.4.10 Configuring the double pulse output

The **Double pulse output** submenu guides the user systematically through all the parameters that have to be set for configuring the double pulse output.

Navigation

"Setup" menu → Double pulse output

▸ Double pulse output		
Master terminal number	→ 🖹 116
Slave terminal number	→ 🖹 116
Signal mode	→ 🖹 116
Assign pulse output 1	→ 🖹 116
Measuring mode	→ 🖹 116
Value per pulse	→ 🖹 116
Pulse width	→ 🖹 116
Failure mode	→ 🖹 116
Invert output signal	→ 🖹 116

Parameter overview with brief description

Parameter	Description	Selection / User interface / User entry	Factory setting
Signal mode	Select the signal mode for the double pulse output.	▪ Passive ▪ Active ▪ Passive NAMUR	Passive
Master terminal number	Shows the terminal numbers used by the master of the double pulse output module.	▪ Not used ▪ 24-25 (I/O 2) ▪ 22-23 (I/O 3)	–
Slave terminal number	Shows the terminal numbers used by the slave of the double pulse output module.	▪ Not used ▪ 24-25 (I/O 2) ▪ 22-23 (I/O 3)	–
Assign pulse output 1	Select process variable for pulse output.	▪ Off ▪ Mass flow ▪ Volume flow ▪ Corrected volume flow [*] ▪ Target mass flow [*] ▪ Carrier mass flow [*] ▪ Target volume flow [*] ▪ Carrier volume flow [*] ▪ Target corrected volume flow [*] ▪ Carrier corrected volume flow [*]	Off
Measuring mode	Select measuring mode for pulse output.	▪ Forward flow ▪ Forward/Reverse flow ▪ Reverse flow ▪ Reverse flow compensation	Forward flow
Value per pulse	Enter measured value at which a pulse is output.	Signed floating-point number	Depends on country and nominal diameter
Pulse width	Define time width of the output pulse.	0.5 to 2 000 ms	0.5 ms
Failure mode	Define output behavior in alarm condition.	▪ Actual value ▪ No pulses	No pulses
Invert output signal	Invert the output signal.	▪ No ▪ Yes	No

*   Visibility depends on order options or device settings

10.4.11 Configuring the local display

The **Display** wizard guides you systematically through all the parameters that can configured for configuring the local display.

Navigation
"Setup" menu → Display

▶ Display	
Format display	→ 🗎 118
Value 1 display	→ 🗎 118
0% bargraph value 1	→ 🗎 118
100% bargraph value 1	→ 🗎 119

Value 2 display	→ 🗎	119
Value 3 display	→ 🗎	119
0% bargraph value 3	→ 🗎	119
100% bargraph value 3	→ 🗎	119
Value 4 display	→ 🗎	119

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Format display	A local display is provided.	Select how measured values are shown on the display.	• 1 value, max. size • 1 bargraph + 1 value • 2 values • 1 value large + 2 values • 4 values	1 value, max. size
Value 1 display	A local display is provided.	Select the measured value that is shown on the local display.	• Mass flow • Volume flow • Corrected volume flow [*] • Target mass flow [*] • Carrier mass flow [*] • Target volume flow [*] • Carrier volume flow [*] • Target corrected volume flow [*] • Carrier corrected volume flow [*] • Density • Reference density [*] • Concentration [*] • Temperature • Carrier pipe temperature [*] • Electronic temperature • Oscillation frequency 0 • Oscillation amplitude 0 [*] • Frequency fluctuation 0 [*] • Oscillation damping 0 [*] • Oscillation damping fluctuation 0 [*] • Signal asymmetry [*] • Exciter current 0 [*] • Totalizer 1 • Totalizer 2 • Totalizer 3 • Current output 1 [*] • Current output 2 [*] • Current output 3 [*] • Current output 4 [*] • Pressure • Application specific output 1 [*] • Index inhomogeneous medium • Application specific output 0 [*] • Index suspended bubbles [*]	Mass flow
0% bargraph value 1	A local display is provided.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
100% bargraph value 1	A local display is provided.	Enter 100% value for bar graph display.	Signed floating-point number	Depends on country and nominal diameter
Value 2 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🗎 119)	None
Value 3 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🗎 119)	None
0% bargraph value 3	A selection was made in the **Value 3 display** parameter.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
100% bargraph value 3	A selection was made in the **Value 3 display** parameter.	Enter 100% value for bar graph display.	Signed floating-point number	0
Value 4 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🗎 119)	None

*   Visibility depends on order options or device settings

10.4.12 Configuring the low flow cut off

The **Low flow cut off** wizard systematically guides the user through all the parameters that must be set to configure low flow cut off.

Navigation

"Setup" menu → Low flow cut off

Parameter overview with brief description

| Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	–	Select process variable for low flow cut off.	▪ Off ▪ Mass flow ▪ Volume flow ▪ Corrected volume flow *	Mass flow
On value low flow cutoff	A process variable is selected in the **Assign process variable** parameter (→ 🖻 120).	Enter on value for low flow cut off.	Positive floating-point number	Depends on country and nominal diameter
Off value low flow cutoff	A process variable is selected in the **Assign process variable** parameter (→ 🖻 120).	Enter off value for low flow cut off.	0 to 100.0 %	50 %
Pressure shock suppression	A process variable is selected in the **Assign process variable** parameter (→ 🖻 120).	Enter time frame for signal suppression (= active pressure shock suppression).	0 to 100 s	0 s

*   Visibility depends on order options or device settings

10.4.13 Configuring the partial filled pipe detection

The **Partial filled pipe detection** wizard guides you systematically through all parameters that have to be set for configuring the monitoring of the pipe filling.

**Navigation**

"Setup" menu → Partially filled pipe detection

▶ Partially filled pipe detection	
Assign process variable	→ 🖺 121
Low value partial filled pipe detection	→ 🖺 121
High value partial filled pipe detection	→ 🖺 121
Response time part. filled pipe detect.	→ 🖺 121

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	–	Select process variable for partially filled pipe detection.	▪ Off ▪ Density ▪ Reference density	Off
Low value partial filled pipe detection	A process variable is selected in the **Assign process variable** parameter (→ 🖺 121).	Enter lower limit value for deactivating partialy filled pipe detection.	Signed floating-point number	200
High value partial filled pipe detection	A process variable is selected in the **Assign process variable** parameter (→ 🖺 121).	Enter upper limit value for deactivating partialy filled pipe detection.	Signed floating-point number	6 000
Response time part. filled pipe detect.	A process variable is selected in the **Assign process variable** parameter (→ 🖺 121).	Enter time before diagnostic message is displayed for partially filled pipe detection.	0 to 100 s	1 s

10.5   Advanced settings

The **Advanced setup** submenu together with its submenus contains parameters for specific settings.
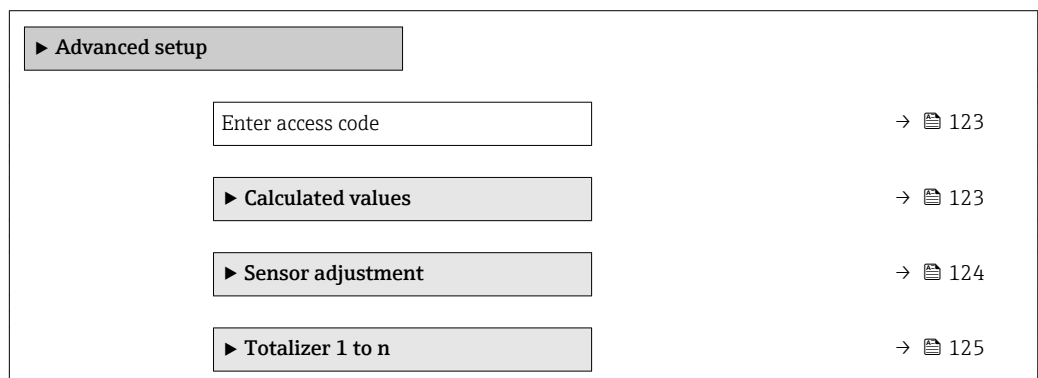

Navigation to the "Advanced setup" submenu

A0032223-EN

🛈 The number of submenus and parameters can vary depending on the device version. Certain submenus and parameters in these submenus are not described in the Operation Instructions. Instead a description is provided in the Special Documentation for the device (→ "Supplementary documentation" section).

Navigation
"Setup" menu → Advanced setup

▶ Advanced setup	
Enter access code	→ 🖺 123
▶ Calculated values	→ 🖺 123
▶ Sensor adjustment	→ 🖺 124
▶ Totalizer 1 to n	→ 🖺 125

10.5.1 Using the parameter to enter the access code

Navigation
"Setup" menu → Advanced setup

Parameter overview with brief description

Parameter	Description	User entry
Enter access code	Enter access code to disable write protection of parameters.	Max. 16-digit character string comprising numbers, letters and special characters

10.5.2 Calculated values

The **Calculated values** submenu contains parameters for calculating the corrected volume flow.

Navigation
"Setup" menu → Advanced setup → Calculated values

Linear expansion coefficient	→ 🖹	124
Square expansion coefficient	→ 🖹	124

Parameter overview with brief description

| Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Corrected volume flow calculation	–	Select reference density for calculating the corrected volume flow.	- Fixed reference density - Calculated reference density - Current input 1 * - Current input 2 * - Current input 3 *	Calculated reference density
External reference density	One of the following options is selected in the **Corrected volume flow calculation** parameter: • Current input 1 * • Current input 2 * • Current input 3 *	Shows external reference density.	Floating point number with sign	–
Fixed reference density	The **Fixed reference density** option is selected in the **Corrected volume flow calculation** parameter parameter.	Enter fixed value for reference density.	Positive floating-point number	1 kg/Nl
Reference temperature	The **Calculated reference density** option is selected in the **Corrected volume flow calculation** parameter parameter.	Enter reference temperature for calculating the reference density.	−273.15 to 99 999 °C	Country-specific: • +20 °C • +68 °F
Linear expansion coefficient	The **Calculated reference density** option is selected in the **Corrected volume flow calculation** parameter parameter.	Enter linear, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	0.0 1/K
Square expansion coefficient	The **Calculated reference density** option is selected in the **Corrected volume flow calculation** parameter parameter.	For media with a non-linear expansion pattern: enter the quadratic, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	0.0 1/K^2

* Visibility depends on order options or device settings

10.5.3 Carrying out a sensor adjustment

The **Sensor adjustment** submenu contains parameters that pertain to the functionality of the sensor.

Navigation

"Setup" menu → Advanced setup → Sensor adjustment
▶ Sensor adjustment		
	Installation direction	→ 🖺 125
	▶ Zero point adjustment	→ 🖺 125

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Installation direction	Set sign of flow direction to match the direction of the arrow on the sensor.	• Flow in arrow direction • Flow against arrow direction	Flow in arrow direction

Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions→ 🖺 195. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:
• To achieve maximum measuring accuracy even with low flow rates.
• Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

Navigation

"Setup" menu → Advanced setup → Sensor adjustment → Zero point adjustment
▶ Zero point adjustment		
	Zero point adjustment control	→ 🖺 125
	Progress	→ 🖺 125

Parameter overview with brief description

Parameter	Description	Selection / User interface	Factory setting
Zero point adjustment control	Start zero point adjustment.	• Cancel • Start	Cancel
Progress	Shows the progress of the process.	0 to 100 %	–

10.5.4   Configuring the totalizer

In the **"Totalizer 1 to n" submenu** the individual totalizer can be configured.

Navigation

"Setup" menu → Advanced setup → Totalizer 1 to n

```
▶ Totalizer 1 to n

          Assign process variable              →  126

          Unit totalizer 1 to n                →  126

          Totalizer operation mode             →  126

          Failure mode                         →  126
```

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection	Factory setting
Assign process variable	–	Select process variable for totalizer.	• Off • Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow *	Mass flow
Unit totalizer 1 to n	A process variable is selected in the **Assign process variable** parameter (→ 126) of the **Totalizer 1 to n** submenu.	Select process variable totalizer unit.	Unit choose list	Country-specific: • kg • lb
Totalizer operation mode	A process variable is selected in the **Assign process variable** parameter (→ 126) of the **Totalizer 1 to n** submenu.	Select totalizer calculation mode.	• Net flow total • Forward flow total • Reverse flow total	Net flow total
Failure mode	A process variable is selected in the **Assign process variable** parameter (→ 126) of the **Totalizer 1 to n** submenu.	Define totalizer behavior in alarm condition.	• Stop • Actual value • Last valid value	Stop

*   Visibility depends on order options or device settings

10.5.5 Carrying out additional display configurations

In the **Display** submenu you can set all the parameters associated with the configuration of the local display.

Navigation

"Setup" menu → Advanced setup → Display

‣ Display	
Format display	→ 🖺 128
Value 1 display	→ 🖺 128
0% bargraph value 1	→ 🖺 128
100% bargraph value 1	→ 🖺 129
Decimal places 1	→ 🖺 129
Value 2 display	→ 🖺 129
Decimal places 2	→ 🖺 129
Value 3 display	→ 🖺 129
0% bargraph value 3	→ 🖺 129
100% bargraph value 3	→ 🖺 129
Decimal places 3	→ 🖺 129
Value 4 display	→ 🖺 129
Decimal places 4	→ 🖺 129
Display language	→ 🖺 129
Display interval	→ 🖺 130
Display damping	→ 🖺 130
Header	→ 🖺 130
Header text	→ 🖺 130
Separator	→ 🖺 130
Backlight	→ 🖺 130

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Format display	A local display is provided.	Select how measured values are shown on the display.	• 1 value, max. size • 1 bargraph + 1 value • 2 values • 1 value large + 2 values • 4 values	1 value, max. size
Value 1 display	A local display is provided.	Select the measured value that is shown on the local display.	• Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow * • Density • Reference density * • Concentration * • Temperature • Carrier pipe temperature * • Electronic temperature • Oscillation frequency 0 • Oscillation amplitude 0 * • Frequency fluctuation 0 * • Oscillation damping 0 * • Oscillation damping fluctuation 0 * • Signal asymmetry * • Exciter current 0 * • Totalizer 1 • Totalizer 2 • Totalizer 3 • Current output 1 * • Current output 2 * • Current output 3 * • Current output 4 * • Pressure • Application specific output 1 * • Index inhomogeneous medium • Application specific output 0 * • Index suspended bubbles *	Mass flow
0% bargraph value 1	A local display is provided.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
100% bargraph value 1	A local display is provided.	Enter 100% value for bar graph display.	Signed floating-point number	Depends on country and nominal diameter
Decimal places 1	A measured value is specified in the **Value 1 display** parameter.	Select the number of decimal places for the display value.	• x • x.x • x.xx • x.xxx • x.xxxx	x.xx
Value 2 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🖺 119)	None
Decimal places 2	A measured value is specified in the **Value 2 display** parameter.	Select the number of decimal places for the display value.	• x • x.x • x.xx • x.xxx • x.xxxx	x.xx
Value 3 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🖺 119)	None
0% bargraph value 3	A selection was made in the **Value 3 display** parameter.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: • 0 kg/h • 0 lb/min
100% bargraph value 3	A selection was made in the **Value 3 display** parameter.	Enter 100% value for bar graph display.	Signed floating-point number	0
Decimal places 3	A measured value is specified in the **Value 3 display** parameter.	Select the number of decimal places for the display value.	• x • x.x • x.xx • x.xxx • x.xxxx	x.xx
Value 4 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the **Value 2 display** parameter (→ 🖺 119)	None
Decimal places 4	A measured value is specified in the **Value 4 display** parameter.	Select the number of decimal places for the display value.	• x • x.x • x.xx • x.xxx • x.xxxx	x.xx
Display language	A local display is provided.	Set display language.	• English • Deutsch • Français • Español • Italiano • Nederlands • Portuguesa • Polski • русский язык (Russian) • Svenska • Türkçe • 中文 (Chinese) • 日本語 (Japanese) • 한국어 (Korean) • العَرَبِيَة (Arabic) * • Bahasa Indonesia • ภาษาไทย (Thai) * • tiếng Việt (Vietnamese) • čeština (Czech)	English (alternatively, the ordered language is preset in the device)

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Display interval	A local display is provided.	Set time measured values are shown on display if display alternates between values.	1 to 10 s	5 s
Display damping	A local display is provided.	Set display reaction time to fluctuations in the measured value.	0.0 to 999.9 s	0.0 s
Header	A local display is provided.	Select header contents on local display.	• Device tag • Free text	Device tag
Header text	In the **Header** parameter, the **Free text** option is selected.	Enter display header text.	Max. 12 characters such as letters, numbers or special characters (e.g. @, %, /)	------------
Separator	A local display is provided.	Select decimal separator for displaying numerical values.	• . (point) • , (comma)	. (point)
Backlight	One of the following conditions is met: • Order code for "Display; operation", option **F** "4-line, illum.; touch control" • Order code for "Display; operation", option **G** "4-line, illum.; touch control +WLAN"	Switch the local display backlight on and off.	• Disable • Enable	Enable

*   Visibility depends on order options or device settings

10.5.6   WLAN configuration

The **WLAN Settings** submenu guides the user systematically through all the parameters that have to be set for the WLAN configuration.

Navigation

"Setup" menu → Advanced setup → WLAN Settings

▸ WLAN settings		
	WLAN IP address	→ 🗎 131
	Security type	→ 🗎 131
	WLAN passphrase	→ 🗎 131
	Assign SSID name	→ 🗎 131
	SSID name	→ 🗎 131
	Apply changes	→ 🗎 131

Parameter overview with brief description

Parameter	Prerequisite	Description	User entry / Selection	Factory setting
WLAN IP address	–	Enter IP address of the WLAN interface of the device.	4 octet: 0 to 255 (in the particular octet)	192.168.1.212
Network security	–	Select the security type of the WLAN network.	• Unsecured • WPA2-PSK • EAP-PEAP with MSCHAPv2 * • EAP-PEAP MSCHAPv2 no server authentic. * • EAP-TLS *	WPA2-PSK
WLAN passphrase	The **WPA2-PSK** option is selected in the **Security type** parameter.	Enter the network key (8 to 32 characters). ⓘ The network key supplied with the device should be changed during commissioning for security reasons.	8 to 32-digit character string comprising numbers, letters and special characters (without spaces)	Serial number of the measuring device (e.g. L100A802000)
Assign SSID name	–	Select which name will be used for SSID: device tag or user-defined name.	• Device tag • User-defined	User-defined
SSID name	• The **User-defined** option is selected in the **Assign SSID name** parameter. • The **WLAN access point** option is selected in the **WLAN mode** parameter.	Enter the user-defined SSID name (max. 32 characters). ⓘ The user-defined SSID name may only be assigned once. If the SSID name is assigned more than once, the devices can interfere with one another.	Max. 32-digit character string comprising numbers, letters and special characters	EH_device designation_last 7 digits of the serial number (e.g. EH_Cubemass_500_ A802000)
Apply changes	–	Use changed WLAN settings.	• Cancel • Ok	Cancel

*   Visibility depends on order options or device settings

10.5.7   Configuration management

After commissioning, you can save the current device configurationor restore the previous device configuration.

You can do so using the **Configuration management** parameter and the related options found in the **Configuration backup** submenu.

Navigation
"Setup" menu → Advanced setup → Configuration backup

```
▸ Configuration backup

        Operating time                              → 🖹 132

        Last backup                                 → 🖹 132

        Configuration management                    → 🖹 132
```
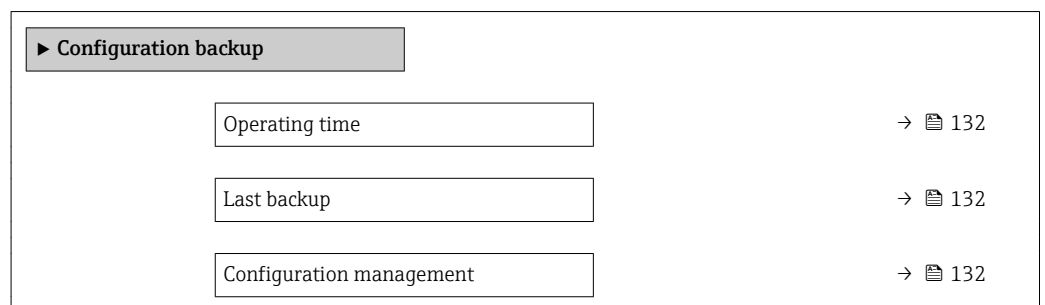

Backup state	→ 🕮 132
Comparison result	→ 🕮 132

Parameter overview with brief description

Parameter	Description	User interface / Selection	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	–
Last backup	Shows when the last data backup was saved to HistoROM backup.	Days (d), hours (h), minutes (m) and seconds (s)	–
Configuration management	Select action for managing the device data in the HistoROM backup.	● Cancel ● Execute backup ● Restore * ● Compare * ● Clear backup data	Cancel
Backup state	Shows the current status of data saving or restoring.	● None ● Backup in progress ● Restoring in progress ● Delete in progress ● Compare in progress ● Restoring failed ● Backup failed	None
Comparison result	Comparison of current device data with HistoROM backup.	● Settings identical ● Settings not identical ● No backup available ● Backup settings corrupt ● Check not done ● Dataset incompatible	Check not done

* Visibility depends on order options or device settings

Function scope of the "Configuration management" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Execute backup	A backup copy of the current device configuration is saved from the HistoROM backup to the memory of the device. The backup copy includes the transmitter data of the device.
Restore	The last backup copy of the device configuration is restored from the device memory to the device's HistoROM backup. The backup copy includes the transmitter data of the device.
Compare	The device configuration saved in the device memory is compared with the current device configuration of the HistoROM backup.
Clear backup data	The backup copy of the device configuration is deleted from the memory of the device.

ℹ *HistoROM backup*
A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

ℹ While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

10.5.8 Using parameters for device administration

The **Administration** submenu systematically guides the user through all the parameters that can be used for device administration purposes.

Navigation

"Setup" menu → Advanced setup → Administration

▶ Administration	
▶ Define access code	→ 🗏 133
▶ Reset access code	→ 🗏 133
Device reset	→ 🗏 134
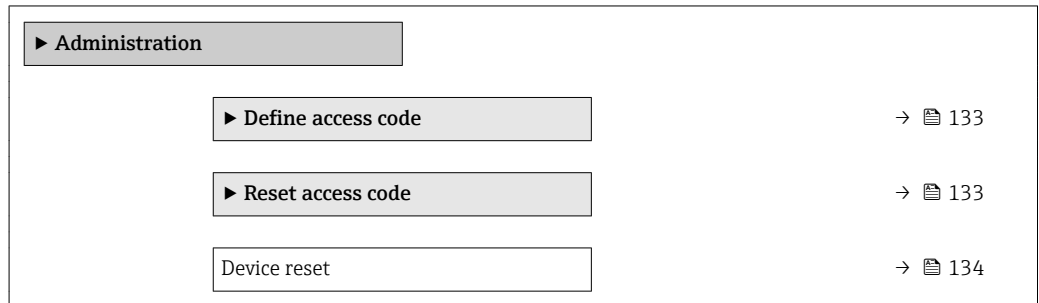

Using the parameter to define the access code

Navigation

"Setup" menu → Advanced setup → Administration → Define access code

▶ Define access code	
Define access code	→ 🗏 133
Confirm access code	→ 🗏 133
Parameter overview with brief description

Parameter	Description	User entry
Define access code	Restrict write-access to parameters to protect the configuration of the device against unintentional changes.	Max. 16-digit character string comprising numbers, letters and special characters
Confirm access code	Confirm the entered access code.	Max. 16-digit character string comprising numbers, letters and special characters

Using the parameter to reset the access code

Navigation

"Setup" menu → Advanced setup → Administration → Reset access code

▶ Reset access code	
Operating time	→ 🗏 134
Reset access code	→ 🗏 134

Parameter overview with brief description

Parameter	Description	User interface / User entry	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	–
Reset access code	Reset access code to factory settings. ℹ For a reset code, contact your Endress+Hauser service organization. The reset code can only be entered via: • Web browser • DeviceCare, FieldCare (via service interface CDI-RJ45) • Fieldbus	Character string comprising numbers, letters and special characters	0x00

Using the parameter to reset the device

Navigation

"Setup" menu → Advanced setup → Administration

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Device reset	Reset the device configuration - either entirely or in part - to a defined state.	• Cancel • To delivery settings • Restart device • Restore S-DAT backup *	Cancel

*   Visibility depends on order options or device settings
10.6   Simulation

The **Simulation** submenu enables you to simulate, without a real flow situation, various process variables in the process and the device alarm mode and to verify downstream signal chains (switching valves or closed-control loops).

Navigation
"Diagnostics" menu → Simulation

▸ Simulation	
Assign simulation process variable	→ 🖺 136
Process variable value	→ 🖺 136
Status input simulation 1 to n	→ 🖺 136
Input signal level 1 to n	→ 🖺 136
Current input 1 to n simulation	→ 🖺 136
Value current input 1 to n	→ 🖺 136

Current output 1 to n simulation	→ 🗎	136
Value current output 1 to n	→ 🗎	136

Frequency value 1 to n	→ 🗎	136
Pulse output simulation 1 to n	→ 🗎	136
Pulse value 1 to n	→ 🗎	136
Switch output simulation 1 to n	→ 🗎	137
Switch status 1 to n	→ 🗎	137
Relay output 1 to n simulation	→ 🗎	137
Switch status 1 to n	→ 🗎	137
Pulse output simulation	→ 🗎	137
Pulse value	→ 🗎	137
Device alarm simulation	→ 🗎	137
Diagnostic event category	→ 🗎	137
Diagnostic event simulation	→ 🗎	137

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Assign simulation process variable	–	Select a process variable for the simulation process that is activated.	• Off • Mass flow • Volume flow • Corrected volume flow * • Target mass flow * • Carrier mass flow * • Target volume flow * • Carrier volume flow * • Target corrected volume flow * • Carrier corrected volume flow * • Density • Reference density * • Temperature • Concentration *	Off
Process variable value	A process variable is selected in the **Assign simulation process variable** parameter (→ 🖺 136).	Enter the simulation value for the selected process variable.	Depends on the process variable selected	0
Status input simulation 1 to n	–	Switch simulation of the status input on and off.	• Off • On	Off
Input signal level 1 to n	In the **Status input simulation** parameter, the **On** option is selected.	Select the signal level for the simulation of the status input.	• High • Low	High
Current input 1 to n simulation	–	Switch simulation of the current input on and off.	• Off • On	Off
Value current input 1 to n	In the **Current input 1 to n simulation** parameter, the **On** option is selected.	Enter the current value for simulation.	0 to 22.5 mA	0 mA
Current output 1 to n simulation	–	Switch the simulation of the current output on and off.	• Off • On	Off
Value current output 1 to n	In the **Current output 1 to n simulation** parameter, the **On** option is selected.	Enter the current value for simulation.	3.59 to 22.5 mA	3.59 mA
Frequency output simulation 1 to n	In the **Operating mode** parameter, the **Frequency** option is selected.	Switch the simulation of the frequency output on and off.	• Off • On	Off
Frequency value 1 to n	In the **Frequency output simulation 1 to n** parameter, the **On** option is selected.	Enter the frequency value for the simulation.	0.0 to 12 500.0 Hz	0.0 Hz
Pulse output simulation 1 to n	In the **Operating mode** parameter, the **Pulse** option is selected.	Set and switch off the pulse output simulation. ℹ️ For **Fixed value** option: **Pulse width** parameter (→ 🖺 107) defines the pulse width of the pulses output.	• Off • Fixed value • Down-counting value	Off
Pulse value 1 to n	In the **Pulse output simulation 1 to n** parameter, the **Down-counting value** option is selected.	Enter the number of pulses for simulation.	0 to 65 535	0

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Switch output simulation 1 to n	In the **Operating mode** parameter, the **Switch** option is selected.	Switch the simulation of the switch output on and off.	• Off • On	Off
Switch status 1 to n	–	Select the status of the status output for the simulation.	• Open • Closed	Open
Relay output 1 to n simulation	–	Switch simulation of the relay output on and off.	• Off • On	Off
Switch status 1 to n	The **On** option is selected in the **Switch output simulation 1 to n** parameter parameter.	Select status of the relay output for the simulation.	• Open • Closed	Open
Pulse output simulation	–	Set and switch off the pulse output simulation. ⓘ For **Fixed value** option: **Pulse width** parameter defines the pulse width of the pulses output.	• Off • Fixed value • Down-counting value	Off
Pulse value	In the **Pulse output simulation** parameter, the **Down-counting value** option is selected.	Set and switch off the pulse output simulation.	0 to 65 535	0
Device alarm simulation	–	Switch the device alarm on and off.	• Off • On	Off
Diagnostic event category	–	Select a diagnostic event category.	• Sensor • Electronics • Configuration • Process	Process
Diagnostic event simulation	–	Select a diagnostic event to simulate this event.	• Off • Diagnostic event picklist (depends on the category selected)	Off
Logging interval	–	Define the logging interval tlog for data logging. This value defines the time interval between the individual data points in the memory.	1.0 to 3 600.0 s	–

*   Visibility depends on order options or device settings

10.7   Protecting settings from unauthorized access

The following write protection options exist in order to protect the configuration of the measuring device from unintentional modification:
- Protect access to parameters via access code → 🖥 137
- Protect access to local operation via key locking → 🖥 73
- Protect access to measuring device via write protection switch → 🖥 139

10.7.1   Write protection via access code
The effects of the user-specific access code are as follows:
- Via local operation, the parameters for the measuring device configuration are write-protected and their values can no longer be changed.
- Device access is protected via the Web browser, as are the parameters for the measuring device configuration.
- Device access is protected via FieldCare or DeviceCare (via CDI-RJ45 service interface), as are the parameters for the measuring device configuration.

Defining the access code via local display

1. Navigate to the **Define access code** parameter (→ 🖺 133).

2. Define a max. 16-digit character string comprising numbers, letters and special characters as the access code.

3. Enter the access code again in the **Confirm access code** parameter (→ 🖺 133) to confirm the code.
   ↳ The 🔒-symbol appears in front of all write-protected parameters.

The device automatically locks the write-protected parameters again if a key is not pressed for 10 minutes in the navigation and editing view. The device locks the write-protected parameters automatically after 60 s if the user skips back to the operational display mode from the navigation and editing view.

> • If parameter write protection is activated via an access code, it can also only be deactivated via this access code → 🖺 72.
> • The user role with which the user is currently logged on via the local display → 🖺 72 is indicated by the **Access status** parameter. Navigation path: Operation → Access status

Parameters which can always be modified via the local display
Certain parameters that do not affect the measurement are excepted from parameter write protection via the local display. Despite the user-specific access code, they can always be modified, even if the other parameters are locked.

	Parameters for configuring the local display	Parameters for configuring the totalizer
	↓	↓
Language	Format display	Control Totalizer
	Contrast display	Preset value
	Display interval	Reset all totalizers
Defining the access code via the Web browser

1. Navigate to the **Define access code** parameter (→ 🖺 133).

2. Define a max. 16-digit numeric code as an access code.

3. Enter the access code again in the **Confirm access code** parameter (→ 🖺 133) to confirm the code.
   ↳ The Web browser switches to the login page.

> If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

> • If parameter write protection is activated via an access code, it can also only be deactivated via this access code → 🖺 72.
> • The user role with which the user is currently logged on via Web browser is indicated by the **Access status** parameter. Navigation path: Operation → Access status

Resetting the access code

If you misplace the user-specific access code, it is possible to reset the code to the factory setting. A reset code must be entered for this purpose. The user-specific access code can then be defined again afterwards.

Via Web browser, FieldCare, DeviceCare (via CDI-RJ45 service interface), fieldbus

[i] For a reset code, contact your Endress+Hauser service organization.

1. Navigate to the **Reset access code** parameter ($\rightarrow$ 🖹 134).

2. Enter the reset code.
   ↳ The access code has been reset to the factory setting **0000**. It can be redefined $\rightarrow$ 🖹 138.

10.7.2   Write protection via write protection switch

Unlike parameter write protection via a user-specific access code, this allows write access to the entire operating menu - except for the **"Contrast display" parameter** - to be locked.

The parameter values are now read only and cannot be edited any more (exception **"Contrast display" parameter**):
• Via local display
• Via HART protocol

Proline 500 – digital

⚠ **WARNING**
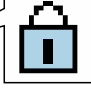

Excessive tightening torque applied to the fixing screws!
Risk of damaging the plastic transmitter.
▶ Tighten the fixing screws as per the tightening torque: 2 Nm (1.5 lbf ft)
A0029673

1. Open the housing cover.

2. Remove the display module.

3. Fold open the terminal cover.

4. Setting the write protection (WP) switch on the main electronics module to the **ON** position enables hardware write protection.
    ↳ In the **Locking status** parameter the **Hardware locked** option is displayed → 🖹 141. In addition, on the local display the 🔏-symbol appears in front of the parameters in the header of the operational display and in the navigation view.
A0029425

5. Setting the write protection (WP) switch on the main electronics module to the **OFF** position (factory setting) disables hardware write protection.
    ↳ No option is displayed in the **Locking status** parameter → 🖹 141. On the local display, the 🔏-symbol disappears from in front of the parameters in the header of the operational display and in the navigation view.

Proline 500

1.
A0029630

Setting the write protection (WP) switch on the main electronics module to the **ON** position enables hardware write protection.
↳ In the **Locking status** parameter the **Hardware locked** option is displayed → 🖹 141. In addition, on the local display the 🔏-symbol appears in front of the parameters in the header of the operational display and in the navigation view.
A0029425

2. Setting the write protection (WP) switch on the main electronics module to the **OFF** position (factory setting) disables hardware write protection.
    ↳ No option is displayed in the **Locking status** parameter → 🖹 141. On the local display, the 🔏-symbol disappears from in front of the parameters in the header of the operational display and in the navigation view.

11 Operation

11.1 Reading the device locking status

Device active write protection: **Locking status** parameter

Operation → Locking status

Function scope of the "Locking status" parameter

Options	Description
None	The access status displayed in the **Access status** parameter applies → 🗎 72. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the PCB board. This locks write access to the parameters (e.g. via local display or operating tool) → 🗎 139.
SIL locked	The SIL mode is enabled. This locks write access to the parameters (e.g. via local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset etc.). Once the internal processing has been completed, the parameters can be changed once again.

11.2 Adjusting the operating language

Detailed information:
- To configure the operating language → 🗎 93
- For information on the operating languages supported by the measuring device → 🗎 205

11.3 Configuring the display

Detailed information:
- On the basic settings for the local display → 🗎 116
- On the advanced settings for the local display → 🗎 127

11.4 Reading measured values

With the **Measured values** submenu, it is possible to read all the measured values.

Navigation
"Diagnostics" menu → Measured values

‣ Measured values	
‣ Measured variables	→ 🗎 142
‣ Input values	→ 🗎 144
‣ Output values	→ 🗎 145
‣ Totalizer	→ 🗎 143

11.4.1   "Measured variables" submenu

The **Measured variables** submenu contains all the parameters needed to display the current measured values for each process variable.

Navigation
"Diagnostics" menu → Measured values → Measured variables

▶ **Measured variables**	
Mass flow	→ 🗎 142
Volume flow	→ 🗎 142
Corrected volume flow	→ 🗎 142
Density	→ 🗎 142
Reference density	→ 🗎 143
Temperature	→ 🗎 143
Pressure value	→ 🗎 143
Concentration	→ 🗎 143
Target mass flow	→ 🗎 143
Carrier mass flow	→ 🗎 143

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Mass flow	–	Displays the mass flow that is currently measured. *Dependency* The unit is taken from the **Mass flow unit** parameter (→ 🗎 96).	Signed floating-point number
Volume flow	–	Displays the volume flow currently calculated. *Dependency* The unit is taken from the **Volume flow unit** parameter (→ 🗎 96).	Signed floating-point number
Corrected volume flow	–	Displays the corrected volume flow that is currently calculated. *Dependency* The unit is taken from the **Corrected volume flow unit** parameter (→ 🗎 96).	Signed floating-point number
Density	–	Shows the density currently measured. *Dependency* The unit is taken from the **Density unit** parameter (→ 🗎 96).	Signed floating-point number

Parameter	Prerequisite	Description	User interface
Reference density	–	Displays the reference density that is currently calculated. *Dependency* The unit is taken from the **Reference density unit** parameter (→ 🖹 96).	Signed floating-point number
Temperature	–	Shows the medium temperature currently measured. *Dependency* The unit is taken from the **Temperature unit** parameter (→ 🖹 97).	Signed floating-point number
Pressure value	–	Displays either a fixed or external pressure value. *Dependency* The unit is taken from the **Pressure unit** parameter (→ 🖹 97).	Signed floating-point number
Concentration	For the following order code: Order code for "Application package", option **ED** "Concentration" ℹ️ The software options currently enabled are displayed in the **Software option overview** parameter.	Displays the concentration that is currently calculated. *Dependency* The unit is taken from the **Concentration unit** parameter.	Signed floating-point number
Target mass flow	With the following conditions: Order code for "Application package", option **ED** "Concentration" ℹ️ The software options currently enabled are displayed in the **Software option overview** parameter.	Displays the mass flow that is currently measured for the target medium. *Dependency* The unit is taken from the **Mass flow unit** parameter (→ 🖹 96).	Signed floating-point number
Carrier mass flow	With the following conditions: Order code for "Application package", option **ED** "Concentration" ℹ️ The software options currently enabled are displayed in the **Software option overview** parameter.	Displays the mass flow that is currently measured for the carrier medium. *Dependency* The unit is taken from the **Mass flow unit** parameter (→ 🖹 96).	Signed floating-point number

11.4.2 "Totalizer" submenu

The **Totalizer** submenu contains all the parameters needed to display the current measured values for every totalizer.

**Navigation**
"Diagnostics" menu → Measured values → Totalizer
```
▶ Totalizer

              Totalizer value 1 to n                              → 🖹 144

              Totalizer overflow 1 to n                           → 🖹 144
```

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Totalizer value 1 to n	A process variable is selected in the **Assign process variable** parameter (→ 🗎 126) of the **Totalizer 1 to n** submenu.	Displays the current totalizer counter value.	Signed floating-point number
Totalizer overflow 1 to n	A process variable is selected in the **Assign process variable** parameter (→ 🗎 126) of the **Totalizer 1 to n** submenu.	Displays the current totalizer overflow.	Integer with sign

11.4.3 "Input values" submenu

The **Input values** submenu guides you systematically to the individual input values.

Navigation
"Diagnostics" menu → Measured values → Input values

▸ **Input values**		
	▸ **Current input 1 to n**	→ 🗎 144
	▸ **Status input 1 to n**	→ 🗎 144

Input values of current input

The **Current input 1 to n** submenu contains all the parameters needed to display the current measured values for every current input.

Navigation
"Diagnostics" menu → Measured values → Input values → Current input 1 to n

▸ **Current input 1 to n**		
	Measured values 1 to n	→ 🗎 144
	Measured current 1 to n	→ 🗎 144

Parameter overview with brief description

Parameter	Description	User interface
Measured values 1 to n	Displays the current input value.	Signed floating-point number
Measured current 1 to n	Displays the current value of the current input.	0 to 22.5 mA

Input values of status input

The **Status input 1 to n** submenu contains all the parameters needed to display the current measured values for every status input.

► Status input 1 to n	
Value status input	→ 🖺 145
Parameter overview with brief description

Parameter	Description	User interface
Value status input	Shows the current input signal level.	• High • Low

11.4.4 Output values

The **Output values** submenu contains all the parameters needed to display the current measured values for every output.

► Output values	
► Current output 1 to n	→ 🖺 145
► Pulse/frequency/switch output 1 to n	→ 🖺 146
► Relay output 1 to n	→ 🖺 146
► Double pulse output	→ 🖺 147
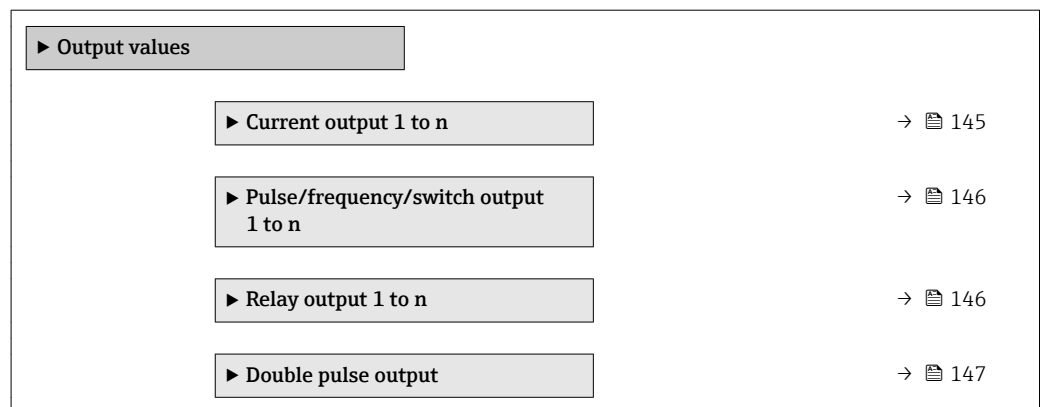

Output values of current output

The **Value current output** submenu contains all the parameters needed to display the current measured values for every current output.

► Current output 1 to n	
Output current 1 to n	→ 🖺 146
Measured current 1 to n	→ 🖺 146
Parameter overview with brief description

Parameter	Description	User interface
Output current 1	Displays the current value currently calculated for the current output.	3.59 to 22.5 mA
Measured current	Displays the current value currently measured for the current output.	0 to 30 mA

Output values for pulse/frequency/switch output

The **Pulse/frequency/switch output 1 to n** submenu contains all the parameters needed to display the current measured values for every pulse/frequency/switch output.

Navigation
"Diagnostics" menu → Measured values → Output values → Pulse/frequency/switch output 1 to n

▶ Pulse/frequency/switch output 1 to n		
	Output frequency 1 to n	→ 🗎 146
	Pulse output 1 to n	→ 🗎 146
	Switch status 1 to n	→ 🗎 146

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Output frequency 1 to n	In the **Operating mode** parameter, the **Frequency** option is selected.	Displays the value currently measured for the frequency output.	0.0 to 12 500.0 Hz
Pulse output 1 to n	The **Pulse** option is selected in the **Operating mode** parameter parameter.	Displays the pulse frequency currently output.	Positive floating-point number
Switch status 1 to n	The **Switch** option is selected in the **Operating mode** parameter.	Displays the current switch output status.	• Open • Closed

Output values for relay output

The **Relay output 1 to n** submenu contains all the parameters needed to display the current measured values for every relay output.

Navigation
"Diagnostics" menu → Measured values → Output values → Relay output 1 to n

▶ Relay output 1 to n		
	Switch status	→ 🗎 147
	Switch cycles	→ 🗎 147
	Max. switch cycles number	→ 🗎 147

Parameter overview with brief description

Parameter	Description	User interface
Switch status	Shows the current relay switch status.	• Open • Closed
Switch cycles	Shows number of all performed switch cycles.	Positive integer
Max. switch cycles number	Shows the maximal number of guaranteed switch cycles.	Positive integer

Output values for double pulse output

The **Double pulse output** submenu contains all the parameters needed to display the current measured values for every double pulse output.

Navigation

"Diagnostics" menu → Measured values → Output values → Double pulse output

▸ Double pulse output	
Pulse output	→ 🖺 147
Parameter overview with brief description

Parameter	Description	User interface
Pulse output	Shows the currently output pulse frequency.	Positive floating-point number

11.5   Adapting the measuring device to the process conditions

The following are available for this purpose:
- Basic settings using the**Setup** menu (→ 🖺 93)
- Advanced settings using the**Advanced setup** submenu (→ 🖺 122)

11.6   Performing a totalizer reset

The totalizers are reset in the **Operation** submenu:
- Control Totalizer
- Reset all totalizers

Navigation

"Operation" menu → Totalizer handling

▸ Totalizer handling	
Control Totalizer 1 to n	→ 🖺 148
Preset value 1 to n	→ 🖺 148
Reset all totalizers	→ 🖺 148

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Control Totalizer 1 to n	A process variable is selected in the **Assign process variable** parameter (→ 🖹 126) of the **Totalizer 1 to n** submenu.	Control totalizer value.	• Totalize • Reset + hold * • Preset + hold * • Reset + totalize * • Preset + totalize * • Hold *	Totalize
Preset value 1 to n	A process variable is selected in the **Assign process variable** parameter (→ 🖹 126) of the **Totalizer 1 to n** submenu.	Specify start value for totalizer. *Dependency* ℹ️ The unit of the selected process variable is specified for the totalizer in the **Unit totalizer** parameter (→ 🖹 126).	Signed floating-point number	Country-specific: • 0 kg • 0 lb
Reset all totalizers	–	Reset all totalizers to 0 and start.	• Cancel • Reset + totalize	Cancel

* Visibility depends on order options or device settings

11.6.1 Function scope of the "Control Totalizer" parameter

Options	Description
Totalize	The totalizer is started or continues running.
Reset + hold	The totaling process is stopped and the totalizer is reset to 0.
Preset + hold	The totaling process is stopped and the totalizer is set to its defined start value from the **Preset value** parameter.
Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.
Preset + totalize	The totalizer is set to the defined start value from the **Preset value** parameter and the totaling process is restarted.
Hold	Totalizing is stopped.

11.6.2 Function scope of the "Reset all totalizers" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Reset + totalize	Resets all totalizers to 0 and restarts the totaling process. This deletes all the flow values previously totalized.

11.7 Showing data logging

The **Extended HistoROM** application package must be enabled in the device (order option) for the **Data logging** submenu to appear. This contains all the parameters for the measured value history.

ℹ️ Data logging is also available via:
- Plant Asset Management Tool FieldCare → 🖹 84.
- Web browser

Function range

- A total of 1000 measured values can be stored
- 4 logging channels
- Adjustable logging interval for data logging
- Displays the measured value trend for each logging channel in the form of a chart
▣ 40   Chart of a measured value trend

- x-axis: depending on the number of channels selected displays 250 to 1000 measured values of a process variable.
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.

If the length of the logging interval or the assignment of the process variables to the channels is changed, the content of the data logging is deleted.

Navigation
"Diagnostics" menu → Data logging

▸ Data logging		
Assign channel 1	→ 🗎	151
Assign channel 2	→ 🗎	151
Assign channel 3	→ 🗎	152
Assign channel 4	→ 🗎	152
Logging interval	→ 🗎	152
Clear logging data	→ 🗎	152
Data logging	→ 🗎	152
Logging delay	→ 🗎	152
Data logging control	→ 🗎	152
Data logging status	→ 🗎	152
Entire logging duration	→ 🗎	152
▸ Display channel 1		
▸ Display channel 2		

‣ **Display channel 3**

‣ **Display channel 4**

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Assign channel 1	The **Extended HistoROM** application package is available.	Assign process variable to logging channel.	• Off • Mass flow • Volume flow • Corrected volume flow* • Target mass flow* • Carrier mass flow* • Target volume flow* • Carrier volume flow* • Target corrected volume flow* • Carrier corrected volume flow* • Density • Reference density* • Concentration* • Temperature • Carrier pipe temperature* • Electronic temperature • Oscillation frequency 0 • Oscillation amplitude* • Frequency fluctuation 0* • Oscillation damping 0* • Oscillation damping fluctuation 0* • Signal asymmetry* • Exciter current 0* • HBSI* • Current output 1* • Current output 2* • Current output 3* • Current output 4* • Pressure • Application specific output 1* • Index inhomogeneous medium • Application specific output 0* • Index suspended bubbles*	Off
Assign channel 2	The **Extended HistoROM** application package is available. The software options currently enabled are displayed in the **Software option overview** parameter.	Assign process variable to logging channel.	Picklist, see **Assign channel 1** parameter (→ 🖹 151)	Off

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Assign channel 3	The **Extended HistoROM** application package is available. ⓘ The software options currently enabled are displayed in the **Software option overview** parameter.	Assign process variable to logging channel.	Picklist, see **Assign channel 1** parameter (→ 🗏 151)	Off
Assign channel 4	The **Extended HistoROM** application package is available. ⓘ The software options currently enabled are displayed in the **Software option overview** parameter.	Assign process variable to logging channel.	Picklist, see **Assign channel 1** parameter (→ 🗏 151)	Off
Logging interval	The **Extended HistoROM** application package is available.	Define the logging interval for data logging. This value defines the time interval between the individual data points in the memory.	0.1 to 3 600.0 s	1.0 s
Clear logging data	The **Extended HistoROM** application package is available.	Clear the entire logging data.	• Cancel • Clear data	Cancel
Data logging	–	Select the data logging method.	• Overwriting • Not overwriting	Overwriting
Logging delay	In the **Data logging** parameter, the **Not overwriting** option is selected.	Enter the time delay for measured value logging.	0 to 999 h	0 h
Data logging control	In the **Data logging** parameter, the **Not overwriting** option is selected.	Start and stop measured value logging.	• None • Delete + start • Stop	None
Data logging status	In the **Data logging** parameter, the **Not overwriting** option is selected.	Displays the measured value logging status.	• Done • Delay active • Active • Stopped	Done
Entire logging duration	In the **Data logging** parameter, the **Not overwriting** option is selected.	Displays the total logging duration.	Positive floating-point number	0 s

*   Visibility depends on order options or device settings

12 Diagnostics and troubleshooting

12.1 General troubleshooting
For local display

Error	Possible causes	Solution
Local display dark and no output signals	Supply voltage does not match the value indicated on the nameplate.	Apply the correct supply voltage .
Local display dark and no output signals	The polarity of the supply voltage is wrong.	Correct the polarity.
Local display dark and no output signals	No contact between connecting cables and terminals.	Check the connection of the cables and correct if necessary.
Local display dark and no output signals	Terminals are not plugged into the I/O electronics module correctly. Terminals are not plugged into the main electronics module correctly.	Check terminals.
Local display dark and no output signals	I/O electronics module is defective. Main electronics module is defective.	Order spare part → 🗎 180.
Local display dark and no output signals	The connector between the main electronics module and display module is not plugged in correctly.	Check the connection and correct if necessary.
Local display dark and no output signals	The connecting cable is not plugged in correctly.	1. Check the connection of the electrode cable and correct if necessary. 2. Check the connection of the coil current cable and correct if necessary.
Local display is dark, but signal output is within the valid range	Display is set too bright or too dark.	• Set the display brighter by simultaneously pressing ⊞ + 🗉. • Set the display darker by simultaneously pressing ⊟ + 🗉.
Local display is dark, but signal output is within the valid range	The cable of the display module is not plugged in correctly.	Insert the plug correctly into the main electronics module and display module.
Local display is dark, but signal output is within the valid range	Display module is defective.	Order spare part → 🗎 180.
Backlighting of local display is red	Diagnostic event with "Alarm" diagnostic behavior has occurred.	Take remedial measures → 🗎 165
Text on local display appears in a foreign language and cannot be understood.	Incorrect operating language is configured.	1. Press ⊟ + ⊞ for 2 s ("home position"). 2. Press 🗉. 3. Set the desired language in the **Display language** parameter (→ 🗎 129).
Message on local display: "Communication Error" "Check Electronics"	Communication between the display module and the electronics is interrupted.	• Check the cable and the connector between the main electronics module and display module. • Order spare part → 🗎 180.

For output signals

Error	Possible causes	Solution
Signal output outside the valid range	Main electronics module is defective.	Order spare part → 🖺 180.
Signal output outside the valid current range (< 3.6 mA or > 22 mA)	Main electronics module is defective. I/O electronics module is defective.	Order spare part → 🖺 180.
Device shows correct value on local display, but signal output is incorrect, though in the valid range.	Configuration error	Check and correct the parameter configuration.
Device measures incorrectly.	Configuration error or device is operated outside the application.	1. Check and correct parameter configuration. 2. Observe limit values specified in the "Technical Data".

For access

Error	Possible causes	Solution
No write access to parameters	Hardware write protection enabled	Set the write protection switch on main electronics module to the **OFF** position → 🖺 139.
No write access to parameters	Current user role has limited access authorization	1. Check user role → 🖺 72. 2. Enter correct customer-specific access code → 🖺 72.
No connection via HART protocol	Communication resistor missing or incorrectly installed.	Install the communication resistor (250 Ω) correctly. Observe the maximum load → 🖺 188.
No connection via HART protocol	Commubox • Connected incorrectly • Configured incorrectly • Drivers not installed correctly • USB interface on computer configured incorrectly	Observe the documentation for the Commubox. 📖 FXA195 HART: Document "Technical Information" TI00404F
Not connecting to Web server	Web server disabled	Using the "FieldCare" or "DeviceCare" operating tool, check whether the Web server of the measuring device is enabled, and enable it if necessary→ 🖺 79.
	Incorrect setting for the Ethernet interface of the computer	1. Check the properties of the Internet protocol (TCP/IP) → 🖺 75→ 🖺 75. 2. Check the network settings with the IT manager.
Not connecting to Web server	Incorrect IP address	Check the IP address: 192.168.1.212 → 🖺 75→ 🖺 75
Not connecting to Web server	Incorrect WLAN access data	• Check WLAN network status. • Log on to the device again using WLAN access data. • Verify that WLAN is enabled on the measuring device and operating device → 🖺 75.
	WLAN communication disabled	–
Not connecting to Web server, FieldCare or DeviceCare	No WLAN network available	• Check if WLAN reception is present: LED on display module is lit blue • Check if WLAN connection is enabled: LED on display module flashes blue • Switch on instrument function.

Error	Possible causes	Solution
Network connection not present or unstable	WLAN network is weak.	• Operating device is outside of reception range: Check network status on operating device. • To improve network performance, use an external WLAN antenna.
	Parallel WLAN and Ethernet communication	• Check network settings. • Temporarily enable only the WLAN as an interface.
Web browser frozen and operation no longer possible	Data transfer active	Wait until data transfer or current action is finished.
	Connection lost	1. Check cable connection and power supply. 2. Refresh the Web browser and restart if necessary.
Content of Web browser incomplete or difficult to read	Not using optimum version of Web server.	1. Use the correct Web browser version → 🖹 74. 2. Clear the Web browser cache and restart the Web browser.
	Unsuitable view settings.	Change the font size/display ratio of the Web browser.
No or incomplete display of contents in the Web browser	• JavaScript not enabled • JavaScript cannot be enabled	1. Enable JavaScript. 2. Enter http://XXX.XXX.X.XXX/basic.html as the IP address.
Operation with FieldCare or DeviceCare via CDI-RJ45 service interface (port 8000)	Firewall of computer or network is preventing communication	Depending on the settings of the firewall used on the computer or in the network, the firewall must be adapted or disabled to allow FieldCare/DeviceCare access.
Flashing of firmware with FieldCare or DeviceCare via CDI-RJ45 service interface (via port 8000 or TFTP ports)	Firewall of computer or network is preventing communication	Depending on the settings of the firewall used on the computer or in the network, the firewall must be adapted or disabled to allow FieldCare/DeviceCare access.

12.2 Diagnostic information via light emitting diodes

12.2.1 Transmitter

Proline 500 – digital

Different LEDs in the transmitter provide information on the device status.
A0029689

1 Supply voltage
2 Device status
3 Not used
4 Communication
5 Service interface (CDI) active

1. Open the housing cover.

2. Remove the display module.

3. Fold open the terminal cover.

LED		Color	Meaning
1	Supply voltage	Off	Supply voltage is off or too low.
		Green	Supply voltage is ok.
2	Device status (normal operation)	Off	Firmware error
		Green	Device status is ok.
		Flashing green	Device is not configured.
		Flashing red	A diagnostic event with "Warning" diagnostic behavior has occurred.
		Red	A diagnostic event with "Alarm" diagnostic behavior has occurred.
		Flashing red/green	The device restarts.
2	Device status (during start-up)	Flashes red slowly	If > 30 seconds: problem with the boot loader.
		Flashes red quickly	If > 30 seconds: compatibility problem when reading the firmware.
3	Not used	–	–
4	Communication	Off	Communication not active.
		White	Communication active.
5	Service interface (CDI)	Off	Not connected or no connection established.
		Yellow	Connected and connection established.
		Flashing yellow	Service interface active.

Proline 500

Different LEDs in the transmitter provide information on the device status.
A0029629

1   Supply voltage
2   Device status
3   Not used
4   Communication
5   Service interface (CDI) active

LED		Color	Meaning
1	Supply voltage	Off	Supply voltage is off or too low.
		Green	Supply voltage is ok.
2	Device status (normal operation)	Off	Firmware error
		Green	Device status is ok.
		Flashing green	Device is not configured.
		Red	A diagnostic event with "Alarm" diagnostic behavior has occurred.
		Flashing red	A diagnostic event with "Warning" diagnostic behavior has occurred.
		Flashing red/green	The device restarts.
2	Device status (during start-up)	Flashes red slowly	If > 30 seconds: problem with the boot loader.
		Flashes red quickly	If > 30 seconds: compatibility problem when reading the firmware.
3	Not used	–	–
4	Communication	Off	Communication not active.
		White	Communication active.
5	Service interface (CDI)	Off	Not connected or no connection established.
		Yellow	Connected and connection established.
		Flashing yellow	Service interface active.

12.2.2   Sensor connection housing

Proline 500 – digital

Various light emitting diodes (LED) on the ISEM electronics (Intelligent Sensor Electronic Module) in the sensor connection housing provide information on the device status.
A0029699

1   Communication
2   Device status
3   Supply voltage

LED		Color	Meaning
1	Communication	White	Communication active.
2	Device status (normal operation)	Red	Problem
		Flashing red	Warning
2	Device status (during start-up)	Flashes red slowly	If > 30 seconds: problem with the boot loader.
		Flashes red quickly	If > 30 seconds: compatibility problem when reading the firmware.
3	Supply voltage	Green	Supply voltage is ok.
		Off	Supply voltage is off or too low.

12.3   Diagnostic information on local display

12.3.1   Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the operational display.

Operational display in alarm condition	Diagnostic message

1   Status signal
2   Diagnostic behavior
3   Diagnostic behavior with diagnostic code
4   Short text
5   Operating elements
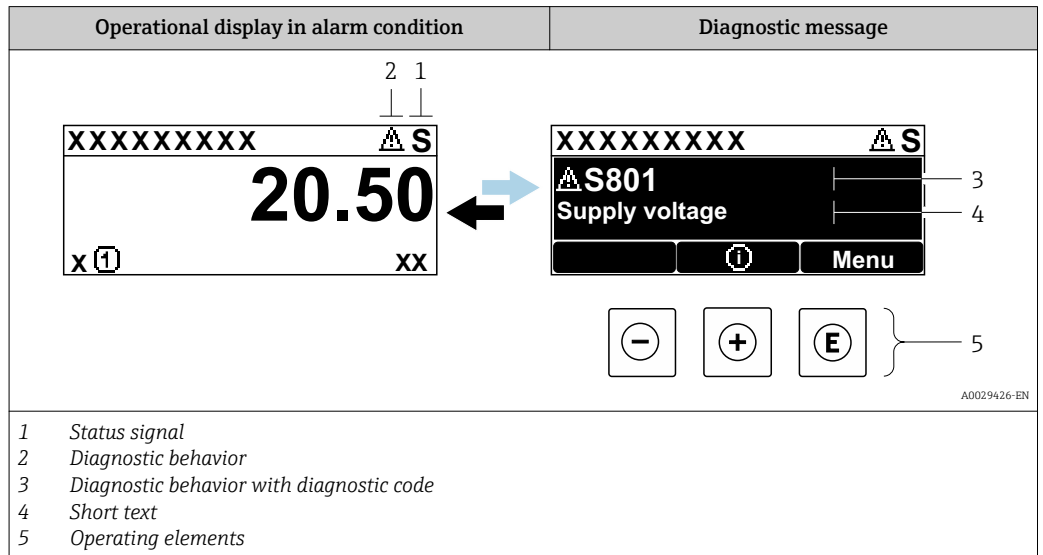

If two or more diagnostic events are pending simultaneously, only the message of the diagnostic event with the highest priority is shown.

Other diagnostic events that have occurred can be displayed in the **Diagnostics** menu:
- Via parameter → 🖹 169
- Via submenus → 🖹 170

Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

The status signals are categorized according to VDI/VDE 2650 and NAMUR Recommendation NE 107: F = Failure, C = Function Check, S = Out of Specification, M = Maintenance Required

Symbol	Meaning
F	**Failure** A device error has occurred. The measured value is no longer valid.
C	**Function check** The device is in service mode (e.g. during a simulation).
S	**Out of specification** The device is operated: • Outside its technical specification limits (e.g. outside the process temperature range) • Outside of the configuration carried out by the user (e.g. maximum flow in parameter **20 mA value**)
M	**Maintenance required** Maintenance is required. The measured value remains valid.

Diagnostic behavior

Symbol	Meaning
⊗	**Alarm** • Measurement is interrupted. • Signal outputs and totalizers assume the defined alarm condition. • A diagnostic message is generated.
⚠	**Warning** Measurement is resumed. The signal outputs and totalizers are not affected. A diagnostic message is generated.

Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.
Operating elements

Key	Meaning
⊕	**Plus key** *In a menu, submenu* Opens the message about remedy information.
Ⓔ	**Enter key** *In a menu, submenu* Opens the operating menu.

12.3.2 Calling up remedial measures
🖼 41 Message about remedial measures

1 Diagnostic information
2 Short text
3 Service ID
4 Diagnostic behavior with diagnostic code
5 Operation time of occurrence
6 Remedial measures

1. The user is in the diagnostic message.
   Press ⊞ (ⓘ symbol).
   ↳ The **Diagnostic list** submenu opens.

2. Select the desired diagnostic event with ⊞ or ⊟ and press Ⓔ .
   ↳ The message about the remedial measures opens.

3. Press ⊟ + ⊞ simultaneously.
   ↳ The message about the remedial measures closes.

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in the **Diagnostic list** submenu or **Previous diagnostics** parameter.

1. Press Ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message for the remedial measures closes.

12.4   Diagnostic information in the Web browser

12.4.1 Diagnostic options

Any faults detected by the measuring device are displayed in the Web browser on the home page once the user has logged on.
A0031056

1   Status area with status signal
2   Diagnostic information
3   Remedy information with Service ID

In addition, diagnostic events which have occurred can be shown in the **Diagnostics** menu:
- Via parameter → 🖺 169
- Via submenu → 🖺 170

Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
	Failure A device error has occurred. The measured value is no longer valid.
	Function check The device is in service mode (e.g. during a simulation).
	Out of specification The device is operated: • Outside its technical specification limits (e.g. outside the process temperature range) • Outside of the configuration carried out by the user (e.g. maximum flow in parameter **20 mA value**)
	Maintenance required Maintenance is required. The measured value is still valid.

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

12.4.2   Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly. These measures are displayed in red along with the diagnostic event and the related diagnostic information.

12.5   Diagnostic information in FieldCare or DeviceCare

12.5.1   Diagnostic options

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.
1   Status area with status signal→ 🖹 159
2   Diagnostic information→ 🖹 160
3   Remedy information with Service ID

ℹ️ In addition, diagnostic events which have occurred can be shown in the **Diagnostics** menu:
- Via parameter → 🖹 169
- Via submenu → 🖹 170

Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.
12.5.2　Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:
- On the home page
  Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu
  Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

1. Call up the desired parameter.

2. On the right in the working area, mouse over the parameter.
   ↳ A tool tip with remedy information for the diagnostic event appears.

12.6　Adapting the diagnostic information

12.6.1　Adapting the diagnostic behavior

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu.

Expert → System → Diagnostic handling → Diagnostic behavior
42　Taking the example of the local display

You can assign the following options to the diagnostic number as the diagnostic behavior:

Options	Description
Alarm	The device stops measurement. The signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated. The background lighting changes to red.
Warning	The device continues to measure. The signal outputs and totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is displayed only in the **Event logbook** submenu (**Event list** submenu) and is not displayed in alternation with the operational display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

12.6.2　Adapting the status signal

Each item of diagnostic information is assigned a specific status signal at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic event category** submenu.

Expert → Communication → Diagnostic event category

Available status signals

Configuration as per HART 7 Specification (Condensed Status), in accordance with NAMUR NE107.

Symbol	Meaning
F A0013956	**Failure** A device error is present. The measured value is no longer valid.
C A0013959	**Function check** The device is in service mode (e.g. during a simulation).
S A0013958	**Out of specification** The device is being operated: • Outside its technical specification limits (e.g. outside the process temperature range) • Outside of the configuration carried out by the user (e.g. maximum flow in parameter **20 mA value**)
M A0013957	**Maintenance required** Maintenance is required. The measured value is still valid.
N A0023076	Has no effect on the condensed status.

12.7   Overview of diagnostic information

In the case of some items of diagnostic information, the status signal and the diagnostic behavior can be changed. Change the diagnostic information → 🖺 164
Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
Diagnostic of sensor				
022	Temperature sensor defective	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	F	Alarm
046	Sensor limit exceeded	1. Inspect sensor 2. Check process condition	S	Warning [1]
062	Sensor connection faulty	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	F	Alarm
063	Exciter current faulty	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	S	Alarm
082	Data storage	1. Check module connections 2. Contact service	F	Alarm
083	Memory content	1. Restart device 2. Restore HistoROM S-DAT backup ('Device reset' parameter) 3. Replace HistoROM S-DAT	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
140	Sensor signal asymmetrical	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	S	Alarm [1]
144	Measurement error too high	1. Check or change sensor 2. Check process conditions	F	Alarm [1]
Diagnostic of electronic				
201	Device failure	1. Restart device 2. Contact service	F	Alarm
242	Software incompatible	1. Check software 2. Flash or change main electronics module	F	Alarm
252	Modules incompatible	1. Check electronic modules 2. Check if correct modules are available (e.g. NEx, Ex) 3. Replace electronic modules	F	Alarm
252	Modules incompatible	1. Check if correct electronic modul is plugged 2. Replace electronic module	F	Alarm
262	Sensor electronic connection faulty	1. Check or replace connection cable between sensor electronic module (ISEM) and main electronics 2. Check or replace ISEM or main electronics	F	Alarm
270	Main electronic failure	Change main electronic module	F	Alarm
271	Main electronic failure	1. Restart device 2. Change main electronic module	F	Alarm
272	Main electronic failure	1. Restart device 2. Contact service	F	Alarm
273	Main electronic failure	Change electronic	F	Alarm
275	I/O module 1 to n defective	Change I/O module	F	Alarm
276	I/O module 1 to n faulty	1. Restart device 2. Change I/O module	F	Alarm
283	Memory content	1. Reset device 2. Contact service	F	Alarm
302	Device verification active	Device verification active, please wait.	C	Warning
303	I/O 1 to n configuration changed	1. Apply I/O module configuration (parameter 'Apply I/O configuration') 2. Afterwards reload device description and check wiring	M	Warning
311	Electronic failure	1. Do not reset device 2. Contact service	M	Warning
332	Writing in HistoROM backup failed	Replace user interface board Ex d/XP: replace transmitter	F	Alarm
361	I/O module 1 to n faulty	1. Restart device 2. Check electronic modules 3. Change I/O Modul or main electronics	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
372	Sensor electronic (ISEM) faulty	1. Restart device 2. Check if failure recurs 3. Replace sensor electronic module (ISEM)	F	Alarm
373	Sensor electronic (ISEM) faulty	1. Transfer data or reset device 2. Contact service	F	Alarm
374	Sensor electronic (ISEM) faulty	1. Restart device 2. Check if failure recurs 3. Replace sensor electronic module (ISEM)	S	Warning [1]
375	I/O- 1 to n communication failed	1. Restart device 2. Check if failure recurs 3. Replace module rack inclusive electronic modules	F	Alarm
378	Supply voltage ISEM faulty	Check supply voltage to the ISEM	F	Alarm
382	Data storage	1. Insert T-DAT 2. Replace T-DAT	F	Alarm
383	Memory content	1. Restart device 2. Delete T-DAT via 'Reset device' parameter 3. Replace T-DAT	F	Alarm
387	HistoROM data faulty	Contact service organization	F	Alarm
Diagnostic of configuration				
330	Flash file invalid	1. Update firmware of device 2. Restart device	M	Warning
331	Firmware update failed	1. Update firmware of device 2. Restart device	F	Warning
410	Data transfer	1. Check connection 2. Retry data transfer	F	Alarm
412	Processing download	Download active, please wait	C	Warning
431	Trim 1 to n	Carry out trim	C	Warning
437	Configuration incompatible	1. Restart device 2. Contact service	F	Alarm
438	Dataset	1. Check data set file 2. Check device configuration 3. Up- and download new configuration	M	Warning
441	Current output 1 to n	1. Check process 2. Check current output settings	S	Warning [1]
442	Frequency output 1 to n	1. Check process 2. Check frequency output settings	S	Warning [1]
443	Pulse output 1 to n	1. Check process 2. Check pulse output settings	S	Warning [1]
444	Current input 1 to n	1. Check process 2. Check current input settings	S	Warning [1]
453	Flow override	Deactivate flow override	C	Warning
484	Failure mode simulation	Deactivate simulation	C	Alarm
485	Measured variable simulation	Deactivate simulation	C	Warning

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
486	Current input 1 to n simulation	Deactivate simulation	C	Warning
491	Current output 1 to n simulation	Deactivate simulation	C	Warning
492	Simulation frequency output 1 to n	Deactivate simulation frequency output	C	Warning
493	Simulation pulse output 1 to n	Deactivate simulation pulse output	C	Warning
494	Switch output simulation 1 to n	Deactivate simulation switch output	C	Warning
495	Diagnostic event simulation	Deactivate simulation	C	Warning
496	Status input simulation	Deactivate simulation status input	C	Warning
502	CT activation/ deactivation failed	Follow the sequence of the custody transfer activation/deactivation: First authorized user login, then set the DIP switch on the main electonic module	C	Warning
520	I/O 1 to n hardware configuration invalid	1. Check I/O hardware configuration 2. Replace wrong I/O module 3. Plug the module of double pulse output on correct slot	F	Alarm
528	Concentration calculation not possible	Out of valid range of the selected calculation algorithm 1. Check concentration settings 2. Check measured values, e.g. density or temperature	S	Alarm
529	Concentration calculation not accurate	Out of valid range of the selected calculation algorithm 1. Check concentration settings 2. Check measured values, e.g. density or temperature	S	Warning
537	Configuration	1. Check IP addresses in network 2. Change IP address	F	Warning
540	Custody transfer mode failed	1. Power off device and toggle DIP switch 2. Deactivate custody transfer mode 3. Reactivate custody transfer mode 4. Check electronic components	F	Alarm
543	Double pulse output	1. Check process 2. Check pulse output settings	S	Warning [1]
593	Double pulse output simulation	Deactivate simulation pulse output	C	Warning
594	Relay output simulation	Deactivate simulation switch output	C	Warning
599	Custody transfer logbook full	1. Deactivate custody transfer mode 2. Clear custody transfer logbook (all 30 entries) 3. Activate custody transfer mode	F	Warning
Diagnostic of process				
803	Current loop	1. Check wiring 2. Change I/O module	F	Alarm
830	Sensor temperature too high	Reduce ambient temp. around the sensor housing	S	Warning [1]

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
831	Sensor temperature too low	Increase ambient temp. around the sensor housing	S	Warning [1]
832	Electronic temperature too high	Reduce ambient temperature	S	Warning [1]
833	Electronic temperature too low	Increase ambient temperature	S	Warning [1]
834	Process temperature too high	Reduce process temperature	S	Warning [1]
835	Process temperature too low	Increase process temperature	S	Warning [1]
842	Process limit	Low flow cut off active! 1. Check low flow cut off configuration	S	Warning [1]
862	Partly filled pipe	1. Check for gas in process 2. Adjust detection limits	S	Warning [1]
882	Input signal	1. Check input configuration 2. Check external device or process conditions	F	Alarm
910	Tubes not oscillating	1. Check electronic 2. Inspect sensor	F	Alarm
912	Medium inhomogeneous	1. Check process cond. 2. Increase system pressure	S	Warning [1]
913	Medium unsuitable	1. Check process conditions 2. Check electronic modules or sensor	S	Warning [1]
941	API temperature out of specification	1. Check process temperature with selected API commodity group 2. Check API related parameters	S	Warning [1]
942	API density out of specification	1. Check process density with selected API commodity group 2. Check API related parameters	S	Warning [1]
943	API pressure out of specification	1. Check process pressure with selected API commodity group 2. Check API related parameters	S	Warning [1]
944	Monitoring failed	Check process conditions for Heartbeat Monitoring	S	Warning [1]
948	Oscillation damping too high	Check process conditions	S	Warning [1]

1)   Diagnostic behavior can be changed.

12.8   Pending diagnostic events

The **Diagnostics** menu allows the user to view the current diagnostic event and the previous diagnostic event separately.

To call up the measures to rectify a diagnostic event:
- Via local display → 🖺 161
- Via Web browser → 🖺 162
- Via "FieldCare" operating tool → 🖺 164
- Via "DeviceCare" operating tool → 🖺 164

Other pending diagnostic events can be displayed in the **Diagnostic list** submenu → 🖺 170

Navigation

"Diagnostics" menu

↻ Diagnostics		
Actual diagnostics	→	🗎 170
Previous diagnostics	→	🗎 170
Operating time from restart	→	🗎 170
Operating time	→	🗎 170

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Actual diagnostics	A diagnostic event has occurred.	Shows the current occured diagnostic event along with its diagnostic information. ℹ If two or more messages occur simultaneously, the message with the highest priority is shown on the display.	Symbol for diagnostic behavior, diagnostic code and short message.
Previous diagnostics	Two diagnostic events have already occurred.	Shows the diagnostic event that occurred prior to the current diagnostic event along with its diagnostic information.	Symbol for diagnostic behavior, diagnostic code and short message.
Operating time from restart	–	Shows the time the device has been in operation since the last device restart.	Days (d), hours (h), minutes (m) and seconds (s)
Operating time	–	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)

12.9 Diagnostic list

Up to 5 currently pending diagnostic events can be displayed in the **Diagnostic list** submenu along with the associated diagnostic information. If more than 5 diagnostic events are pending, the events with the highest priority are shown on the display.

Navigation path

Diagnostics → Diagnostic list
A0014006-EN

🖼 *43   Taking the example of the local display*

ℹ️ To call up the measures to rectify a diagnostic event:
   • Via local display → 🖺 161
   • Via Web browser → 🖺 162
   • Via "FieldCare" operating tool → 🖺 164
   • Via "DeviceCare" operating tool → 🖺 164

12.10   Event logbook

12.10.1 Reading out the event logbook

A chronological overview of the event messages that have occurred is provided in the **Events list** submenu.

Navigation path
Diagnostics menu → **Event logbook** submenu → Event list
A0014008-EN

🖼 *44   Taking the example of the local display*

• A maximum of 20 event messages can be displayed in chronological order.
• If the **Extended HistoROM** application package (order option) is enabled in the device, the event list can contain up to 100 entries .

The event history includes entries for:
• Diagnostic events → 🖺 165
• Information events → 🖺 172

In addition to the operation time of its occurrence, each event is also assigned a symbol that indicates whether the event has occurred or is ended:
• Diagnostic event
  • ⊙: Occurrence of the event
  • ⊙: End of the event
• Information event
  ⊙: Occurrence of the event

ℹ️ To call up the measures to rectify a diagnostic event:
   • Via local display → 🖺 161
   • Via Web browser → 🖺 162
   • Via "FieldCare" operating tool → 🖺 164
   • Via "DeviceCare" operating tool → 🖺 164

ℹ️ For filtering the displayed event messages → 🖺 172

12.10.2 Filtering the event logbook

Using the **Filter options** parameter you can define which category of event message is displayed in the **Events list** submenu.

Navigation path
Diagnostics → Event logbook → Filter options

Filter categories
- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

12.10.3 Overview of information events

Unlike a diagnostic event, an information event is displayed in the event logbook only and not in the diagnostic list.

Info number	Info name
I1000	--------(Device ok)
I1079	Sensor changed
I1089	Power on
I1090	Configuration reset
I1091	Configuration changed
I1092	HistoROM backup deleted
I1111	Density adjust failure
I1137	Electronic changed

12.11   Resetting the measuring device

Using the**Device reset** parameter (→ 🖺 134) it is possible to reset the entire device configuration or some of the configuration to a defined state.

12.11.1 Function scope of the "Device reset" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.
Restart device	The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
Restore S-DAT backup	Restore the data that are saved on the S-DAT. The data record is restored from the electronics memory to the S-DAT. ⓘ This option is displayed only in an alarm condition.

12.12   Device information

The **Device information** submenu contains all parameters that display different information for device identification.

Parameter overview with brief description

Parameter	Description	User interface	Factory setting
Device tag	Shows name of measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Promass
Serial number	Shows the serial number of the measuring device.	Max. 11-digit character string comprising letters and numbers.	–
Firmware version	Shows the device firmware version installed.	Character string in the format xx.yy.zz	–
Device name	Shows the name of the transmitter. ℹ The name can be found on the nameplate of the transmitter.	Cubemass 300/500	–
Order code	Shows the device order code. ℹ The order code can be found on the nameplate of the sensor and transmitter in the "Order code" field.	Character string composed of letters, numbers and certain punctuation marks (e.g. /).	–
Extended order code 1	Shows the 1st part of the extended order code. ℹ The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	–
Extended order code 2	Shows the 2nd part of the extended order code. ℹ The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	–
Extended order code 3	Shows the 3rd part of the extended order code. ℹ The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	–
ENP version	Shows the version of the electronic nameplate (ENP).	Character string	2.02.00
Device revision	Shows the device revision with which the device is registered with the HART Communication Foundation.	2-digit hexadecimal number	6
Device ID	Shows the device ID for identifying the device in a HART network.	6-digit hexadecimal number	–
Device type	Shows the device type with which the measuring device is registered with the HART Communication Foundation.	2-digit hexadecimal number	0x3B (for Promass 300/500)
Manufacturer ID	Shows the manufacturer ID device is registered with the HART Communication Foundation.	2-digit hexadecimal number	0x11 (for Endress+Hauser)

12.13   Firmware history

Release date	Firmware version	Order code for "Firmware version"	Firmware changes	Documentation type	Documentation
09.2019	01.05.zz	Option **66**	• Gas Fraction Handler Adaptive Filter, Gas Entrainment Index • Application-specific Input module • Upgrading of the Petroleum application package	Operating Instructions	BA01527D/06/EN/03.19

Release date	Firmware version	Order code for "Firmware version"	Firmware changes	Documentation type	Documentation

10.2017	01.01.zz	Option **71**	• Petroleum new
			• Concentration update
			• OPC-UA with Security new
			• Local display - enhanced performance and data entry via text editor
			• Optimized keypad lock for local display
			• Improvements and enhancements with regard to custody transfer measurement
			• Web server feature update
			  • Support for trend data function
			  • Heartbeat function enhanced to include detailed results (page 3/4 of the report)
			  • Device configuration as PDF (parameter log, similar to FDT print)
			• Network capability of Ethernet (service) interface
			• Comprehensive Heartbeat feature update
			• Local display - support for WLAN infrastructure mode
			• Implementation of reset code
				Operating Instructions	BA01527D/06/EN/02.17

08.2016	01.00.zz	Option **78**	Original firmware	Operating Instructions	BA01527D/06/EN/01.16

It is possible to flash the firmware to the current version or the previous version using the service interface. For the compatibility of the firmware version, see the "Device history and compatibility" section → 🕮 178

For the compatibility of the firmware version with the previous version, the installed device description files and operating tools, observe the information about the device in the "Manufacturer's information" document.

The manufacturer's information is available:
- In the Download Area of the Endress+Hauser web site: www.endress.com → Downloads
- Specify the following details:
  - Product root: e.g. 8C5B
    The product root is the first part of the order code: see the nameplate on the device.
  - Text search: Manufacturer's information
  - Media type: Documentation – Technical Documentation

12.14   Device history and compatibility

The device model is documented in the order code on the nameplate of the device (e.g. 8F3BXX-XXX....XXXA1-XXXXXX).

13 Maintenance

13.1 Maintenance tasks

No special maintenance work is required.

13.1.1 Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the seals.

13.1.2 Interior cleaning

Observe the following points for CIP and SIP cleaning:
• Use only cleaning agents to which the process-wetted materials are adequately resistant.
• Observe the maximum permitted medium temperature for the measuring device
  → 🕮 200.

13.2 Measuring and test equipment

Endress+Hauser offers a wide variety of measuring and test equipment, such as W@M or device tests.

🛈 Your Endress+Hauser Sales Center can provide detailed information on the services.

List of some of the measuring and testing equipment: → 🕮 182→ 🕮 184

13.3 Endress+Hauser services

Endress+Hauser offers a wide variety of services for maintenance such as recalibration, maintenance service or device tests.

🛈 Your Endress+Hauser Sales Center can provide detailed information on the services.

14   Repair

14.1   General notes

14.1.1   Repair and conversion concept

The Endress+Hauser repair and conversion concept provides for the following:
- The measuring devices have a modular design.
- Spare parts are grouped into logical kits with the associated Installation Instructions.
- Repairs are carried out by Endress+Hauser Service or by appropriately trained customers.
- Certified devices can only be converted to other certified devices by Endress+Hauser Service or at the factory.

14.1.2   Notes for repair and conversion

For repair and modification of a measuring device, observe the following notes:
▶ Use only original Endress+Hauser spare parts.
▶ Carry out the repair according to the Installation Instructions.
▶ Observe the applicable standards, federal/national regulations, Ex documentation (XA) and certificates.
▶ Document every repair and each conversion and enter them into the *W@M* life cycle management database.

14.2   Spare parts

W@M Device Viewer (www.endress.com/deviceviewer):
All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

Measuring device serial number:
- Is located on the nameplate of the device.
- Can be read out via the **Serial number** parameter (→ 📄 175) in the **Device information** submenu.

14.3   Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

14.4   Return

The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the website for more information:
    http://www.endress.com/support/return-material

2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

14.5   Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.

14.5.1   Removing the measuring device

1. Switch off the device.

⚠ WARNING

Danger to persons from process conditions.
▶ Beware of hazardous process conditions such as pressure in the measuring device, high temperatures or aggressive fluids.

2. Carry out the mounting and connection steps from the "Mounting the measuring device" and "Connecting the measuring device" sections in reverse order. Observe the safety instructions.

14.5.2   Disposing of the measuring device

⚠ WARNING

Danger to personnel and environment from fluids that are hazardous to health.
▶ Ensure that the measuring device and all cavities are free of fluid residues that are hazardous to health or the environment, e.g. substances that have permeated into crevices or diffused through plastic.

Observe the following notes during disposal:
▶ Observe valid federal/national regulations.
▶ Ensure proper separation and reuse of the device components.
15   Accessories

Various accessories, which can be ordered with the device or subsequently from Endress +Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

15.1   Device-specific accessories

15.1.1   For the transmitter

Accessories	Description

Transmitter
• Proline 500 – digital
• Proline 500
	Transmitter for replacement or storage. Use the order code to define the following specifications:
	• Approvals
	• Output
	• Input
	• Display/operation
	• Housing
	• Software
	
	• Proline 500 – digital transmitter:
	  Order number: 8X5BXX-*********A
	• Proline 500 transmitter:
	  Order number: 8X5BXX-*********B
	
	Proline 500 transmitter for replacement:
	It is essential to specify the serial number of the current transmitter when ordering. Based on the serial number, the device-specific data (e.g., calibration factors) of the replacement device can be used for the new transmitter.
	
	• Proline 500 – digital transmitter: Installation Instructions EA01151D
	• Proline 500 transmitter: Installation Instructions EA01152D

External WLAN antenna	External WLAN antenna with 1.5 m (59.1 in) connecting cable and two angle brackets. Order code for "Accessory enclosed", option P8 "Wireless antenna wide area". • The external WLAN antenna is not suitable for use in hygienic applications. • Further information on the WLAN interface → 🗎 82. Order number: 71351317 Installation Instructions EA01238D
Pipe mounting set	Pipe mounting set for transmitter. Proline 500 – digital transmitter Order number: 71346427 Installation Instructions EA01195D Proline 500 transmitter Order number: 71346428

Protective cover
 	
Transmitter
• Proline 500 – digital
• Proline 500
	Is used to protect the measuring device from the effects of the weather: e.g. rainwater, excess heating from direct sunlight.
	
	• Proline 500 – digital transmitter
	  Order number: 71343504
	• Proline 500 transmitter
	  Order number: 71343505
	
	Installation Instructions EA01191D

Display guard Proline 500 – digital	Is used to protect the display against impact or scoring from sand in desert areas. ℹ️ Order number: 71228792 📖 Installation Instructions EA01093D
Connecting cable Proline 500 – digital Sensor – Transmitter	The connecting cable can be ordered directly with the measuring device (order code for "Cable, sensor connection) or as an accessory (order number DK8012). The following cable lengths are available: order code for "Cable, sensor connection" • Option B: 20 m (65 ft) • Option E: User configurable up to max. 50 m • Option F: User configurable up to max. 165 ft ℹ️ Maximum possible cable length for a Proline 500 – digital connecting cable: 300 m (1 000 ft)
Connecting cable Proline 500 Sensor – Transmitter	The connecting cable can be ordered directly with the measuring device (order code for "Cable, sensor connection") or as an accessory (order number DK8012). The following cable lengths are available: order code for "Cable, sensor connection" • Option 1: 5 m (16 ft) • Option 2: 10 m (32 ft) • Option 3: 20 m (65 ft) ℹ️ Possible cable length for a Proline 500 connecting cable: max. 20 m (65 ft)

15.2   Communication-specific accessories

Accessories	Description
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB interface. 📖 Technical Information TI00404F
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. 📖 • Technical Information TI00429F • Operating Instructions BA00371F
Fieldgate FXA42	Is used to transmit the measured values of connected 4 to 20 mA analog measuring devices, as well as digital measuring devices 📖 • Technical Information TI01297S • Operating Instructions BA01778S • Product page: www.endress.com/fxa42
Field Xpert SMT70	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous and non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle. 📖 • Technical Information TI01342S • Operating Instructions BA01709S • Product page: www.endress.com/smt70
Field Xpert SMT77	The Field Xpert SMT77 tablet PC for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1. 📖 • Technical Information TI01418S • Operating Instructions BA01923S • Product page: www.endress.com/smt77

15.3   Service-specific accessories

Accessories	Description
Applicator	Software for selecting and sizing Endress+Hauser measuring devices: • Choice of measuring devices for industrial requirements • Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, flow velocity and accuracy. • Graphic illustration of the calculation results • Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. Applicator is available: • Via the Internet: https://portal.endress.com/webapp/applicator • As a downloadable DVD for local PC installation.
W@M	W@M Life Cycle Management Improved productivity with information at your fingertips. Data relevant to a plant and its components is generated from the first stages of planning and during the asset's complete life cycle. W@M Life Cycle Management is an open and flexible information platform with online and on-site tools. Instant access for your staff to current, in-depth data shortens your plant's engineering time, speeds up procurement processes and increases plant uptime. Combined with the right services, W@M Life Cycle Management boosts productivity in every phase. For more information, visit www.endress.com/lifecyclemanagement
FieldCare	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. 📖 Operating Instructions BA00027S and BA00059S
DeviceCare	Tool to connect and configure Endress+Hauser field devices. 📖 Innovation brochure IN01047S

15.4   System components

Accessories	Description
Memograph M graphic data manager	The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick. 📖 • Technical Information TI00133R • Operating Instructions BA00247R
Cerabar M	The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value. 📖 • Technical Information TI00426P and TI00436P • Operating Instructions BA00200P and BA00382P
Cerabar S	The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value. 📖 • Technical Information TI00383P • Operating Instructions BA00271P
iTEMP	The temperature transmitters can be used in all applications and are suitable for the measurement of gases, steam and liquids. They can be used to read in the medium temperature. 📖 "Fields of Activity" document FA00006T

16   Technical data

16.1   Application

The measuring device is intended only for the flow measurement of liquids and gases.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

To ensure that the device remains in proper operating condition for its service life, use the measuring device only for media against which the process-wetted materials are sufficiently resistant.

16.2   Function and system design

Measuring principle	Mass flow measurement based on the Coriolis measuring principle
Measuring system	The measuring system consists of a transmitter and a sensor. The transmitter and sensor are mounted in physically separate locations. They are interconnected by connecting cables. For information on the structure of the device → 🕮 15

16.3   Input

Measured variable	**Direct measured variables**

- Mass flow
- Density
- Temperature

Calculated measured variables

- Volume flow
- Corrected volume flow
- Reference density

Measuring range	**Measuring range for liquids**

DN		Measuring range full scale values $\dot{m}_{min(F)}$ to $\dot{m}_{max(F)}$	
[mm]	[in]	[kg/h]	[lb/min]
1	¹⁄₂₄	0 to 20	0 to 0.735
2	¹⁄₁₂	0 to 100	0 to 3.675
4	⅛	0 to 450	0 to 16.54
6	¼	0 to 1000	0 to 36.75

Measuring range for gases

The full scale value depends on the density and the sound velocity of the gas used and can be calculated with the formula below:

$$\dot{m}_{max(G)} = \text{minimum } (\dot{m}_{max(F)} \cdot \rho_G : x \; ; \rho_G \cdot c_G \cdot \pi/2 \cdot (d_i)^2 \cdot 3600)$$

$\dot{m}_{max(G)}$	Maximum full scale value for gas [kg/h]
$\dot{m}_{max(F)}$	Maximum full scale value for liquid [kg/h]
$\dot{m}_{max(G)} < \dot{m}_{max(F)}$	$\dot{m}_{max(G)}$ can never be greater than $\dot{m}_{max(F)}$
ρ_G	Gas density in [kg/m³] at operating conditions
x	Constant dependent on nominal diameter
c_G	Sound velocity (gas) [m/s]
d_i	Measuring tube internal diameter [m]

DN		x
[mm]	[in]	[kg/m³]
1	¹⁄₂₄	20
2	¹⁄₁₂	20
4	⅛	20
6	¼	20

Recommended measuring range

Flow limit →

Operable flow range	Over 1000 : 1.

Flow rates above the preset full scale value do not override the electronics unit, with the result that the totalizer values are registered correctly.

Input signal | **External measured values**

To increase the accuracy of certain measured variables or to calculate the corrected volume flow for gases, the automation system can continuously write different measured values to the measuring device:
- Operating pressure to increase accuracy (Endress+Hauser recommends the use of a pressure measuring device for absolute pressure, e.g. Cerabar M or Cerabar S)
- Medium temperature to increase accuracy (e.g. iTEMP)
- Reference density for calculating the corrected volume flow for gases

Various pressure and temperature measuring devices can be ordered from Endress +Hauser: see "Accessories" section → 🖹 184

It is recommended to read in external measured values to calculate the corrected volume flow.

HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:
- HART protocol
- Burst mode

Current input

The measured values are written from the automation system to the measuring device via the current input → 🖹 187.

Current input 0/4 to 20 mA

Current input	0/4 to 20 mA (active/passive)
Current span	• 4 to 20 mA (active) • 0/4 to 20 mA (passive)
Resolution	1 µA
Voltage drop	Typically: 0.6 to 2 V for 3.6 to 22 mA (passive)
Maximum input voltage	≤ 30 V (passive)
Open-circuit voltage	≤ 28.8 V (active)
Possible input variables	• Pressure • Temperature • Density

Status input

Maximum input values	• DC −3 to 30 V • If status input is active (ON): R_i >3 kΩ
Response time	Configurable: 5 to 200 ms
Input signal level	• Low signal: DC −3 to +5 V • High signal: DC 12 to 30 V
Assignable functions	• Off • Reset the individual totalizers separately • Reset all totalizers • Flow override

16.4 Output

Output signal

Current output 4 to 20 mA HART

Order code	"Output; input 1" (20): Option BA: current output 4 to 20 mA HART
Signal mode	Can be set to: • Active • Passive
Current range	Can be set to: • 4 to 20 mA NAMUR • 4 to 20 mA US • 4 to 20 mA • 0 to 20 mA (only if the signal mode is active) • Fixed current
Open-circuit voltage	DC 28.8 V (active)
Maximum input voltage	DC 30 V (passive)
Load	250 to 700 Ω
Resolution	0.38 µA
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature • Electronics temperature • Oscillation frequency 0 • Oscillation damping 0 • Signal asymmetry • Exciter current 0 The range of options increases if the measuring device has one or more application packages.

Current output 4 to 20 mA HART Ex i

Order code	"Output; input 1" (20) choose from: • Option CA: current output 4 to 20 mA HART Ex i passive • Option CC: current output 4 to 20 mA HART Ex i active
Signal mode	Depends on the selected order version.
Current range	Can be set to: • 4 to 20 mA NAMUR • 4 to 20 mA US • 4 to 20 mA • 0 to 20 mA (only if the signal mode is active) • Fixed current
Open-circuit voltage	DC 21.8 V (active)
Maximum input voltage	DC 30 V (passive)
Load	• 250 to 400 Ω (active) • 250 to 700 Ω (passive)
Resolution	0.38 µA

Damping	Configurable: 0 to 999.9 s
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature • Electronics temperature • Oscillation frequency 0 • Oscillation damping 0 • Signal asymmetry • Exciter current 0 ℹ The range of options increases if the measuring device has one or more application packages.

Current output 4 to 20 mA

Order code	"Output; input 2" (21), "Output; input 3" (022) or "Output; input 4" (023): Option B: current output 4 to 20 mA
Signal mode	Can be set to: • Active • Passive
Current span	Can be set to: • 4 to 20 mA NAMUR • 4 to 20 mA US • 4 to 20 mA • 0 to 20 mA (only if the signal mode is active) • Fixed current
Maximum output values	22.5 mA
Open-circuit voltage	DC 28.8 V (active)
Maximum input voltage	DC 30 V (passive)
Load	0 to 700 Ω
Resolution	0.38 µA
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature • Electronics temperature • Oscillation frequency 0 • Oscillation damping 0 • Signal asymmetry • Exciter current 0 ℹ The range of options increases if the measuring device has one or more application packages.

Current output 4 to 20 mA Ex i passive

Order code	"Output; input 2" (21), "Output; input 3" (022): Option C: current output 4 to 20 mA Ex i passive
Signal mode	Passive
Current span	Can be set to: • 4 to 20 mA NAMUR • 4 to 20 mA US • 4 to 20 mA • Fixed current

Maximum output values	22.5 mA
Maximum input voltage	DC 30 V
Load	0 to 700 Ω
Resolution	0.38 µA
Damping	Configurable: 0 to 999 s
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature • Electronics temperature • Oscillation frequency 0 • Oscillation damping 0 • Signal asymmetry • Exciter current 0 ℹ The range of options increases if the measuring device has one or more application packages.

Pulse/frequency/switch output

Function	Can be set to pulse, frequency or switch output
Version	Open collector Can be set to: • Active • Passive • Passive NAMUR ℹ Ex-i, passive
Maximum input values	DC 30 V, 250 mA (passive)
Open-circuit voltage	DC 28.8 V (active)
Voltage drop	For 22.5 mA: ≤ DC 2 V
Pulse output	
Maximum input values	DC 30 V, 250 mA (passive)
Maximum output current	22.5 mA (active)
Open-circuit voltage	DC 28.8 V (active)
Pulse width	Configurable: 0.05 to 2 000 ms
Maximum pulse rate	10 000 Impulse/s
Pulse value	Adjustable
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow
Frequency output	
Maximum input values	DC 30 V, 250 mA (passive)
Maximum output current	22.5 mA (active)
Open-circuit voltage	DC 28.8 V (active)
Output frequency	Adjustable: end value frequency 2 to 10 000 Hz (f_{max} = 12 500 Hz)
Damping	Configurable: 0 to 999.9 s
Pulse/pause ratio	1:1

Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature • Electronics temperature • Oscillation frequency 0 • Oscillation damping 0 • Signal asymmetry • Exciter current 0 ℹ The range of options increases if the measuring device has one or more application packages.
Switch output	
Maximum input values	DC 30 V, 250 mA (passive)
Open-circuit voltage	DC 28.8 V (active)
Switching behavior	Binary, conductive or non-conductive
Switching delay	Configurable: 0 to 100 s
Number of switching cycles	Unlimited

Assignable functions	• Off
	• On
	• Diagnostic behavior
	• Limit value
	  • Mass flow
	  • Volume flow
	  • Corrected volume flow
	  • Density
	  • Reference density
	  • Temperature
	  • Totalizer 1-3
	• Flow direction monitoring
	• Status
	  • Partially filled pipe detection
	  • Low flow cut off
	
	ℹ The range of options increases if the measuring device has one or more application packages.

Double pulse output

Function	Double pulse
Version	Open collector Can be set to: • Active • Passive • Passive NAMUR
Maximum input values	DC 30 V, 250 mA (passive)
Open-circuit voltage	DC 28.8 V (active)
Voltage drop	For 22.5 mA: ≤ DC 2 V
Output frequency	Configurable: 0 to 1000 Hz
Damping	Configurable: 0 to 999 s

Pulse/pause ratio	1:1
Assignable measured variables	• Mass flow • Volume flow • Corrected volume flow • Density • Reference density • Temperature ⓘ The range of options increases if the measuring device has one or more application packages.

Relay output

Function	Switch output
Version	Relay output, galvanically isolated
Switching behavior	Can be set to: • NO (normally open), factory setting • NC (normally closed)
Maximum switching capacity (passive)	• DC 30 V, 0.1 A • AC 30 V, 0.5 A

Assignable functions	• Off
	• On
	• Diagnostic behavior
	• Limit value
	  • Mass flow
	  • Volume flow
	  • Corrected volume flow
	  • Density
	  • Reference density
	  • Temperature
	  • Totalizer 1-3
	• Flow direction monitoring
	• Status
	  • Partially filled pipe detection
	  • Low flow cut off
	
	ⓘ The range of options increases if the measuring device has one or more application packages.

User-configurable input/output

One specific input or output is assigned to a user-configurable input/output (configurable I/O) during device commissioning.

The following inputs and outputs are available for assignment:
• Choice of current output: 4 to 20 mA (active), 0/4 to 20 mA (passive)
• Pulse/frequency/switch output
• Choice of current input: 4 to 20 mA (active), 0/4 to 20 mA (passive)
• Status input

Signal on alarm   Depending on the interface, failure information is displayed as follows:

Current output 0/4 to 20 mA

4 to 20 mA

Failure mode	Choose from:
	• 4 to 20 mA in accordance with NAMUR recommendation NE 43
	• 4 to 20 mA in accordance with US
	• Min. value: 3.59 mA
	• Max. value: 22.5 mA
	• Freely definable value between: 3.59 to 22.5 mA
	• Actual value
	• Last valid value

0 to 20 mA

Failure mode	Choose from:
	• Maximum alarm: 22 mA
	• Freely definable value between: 0 to 20.5 mA

Pulse/frequency/switch output

Pulse output	
Failure mode	Choose from:
	• Actual value
	• No pulses
Frequency output	
Failure mode	Choose from:
	• Actual value
	• 0 Hz
	• Defined value (f_{max} 2 to 12 500 Hz)
Switch output	
Failure mode	Choose from:
	• Current status
	• Open
	• Closed

Relay output

Failure mode	Choose from:
	• Current status
	• Open
	• Closed

Local display

Plain text display	With information on cause and remedial measures
Backlight	Red backlighting indicates a device error.

 Status signal as per NAMUR recommendation NE 107

Interface/protocol
- Via digital communication:
  HART protocol
- Via service interface
  - CDI-RJ45 service interface
  - WLAN interface

Plain text display	With information on cause and remedial measures

Web browser

Plain text display	With information on cause and remedial measures

Light emitting diodes (LED)

Status information	Status indicated by various light emitting diodes
	The following information is displayed depending on the device version: • Supply voltage active • Data transmission active • Device alarm/error has occurred ⓘ Diagnostic information via light emitting diodes → 🖺 155

Low flow cut off	The switch points for low flow cut off are user-selectable.

Galvanic isolation	The outputs are galvanically isolated from one another and from earth (PE).

Protocol-specific data

Manufacturer ID	0x11
Device type ID	0x3B
HART protocol revision	7
Device description files (DTM, DD)	Information and files under: www.endress.com
HART load	Min. 250 Ω
System integration	Information on system integration → 🖺 88. • Measured variables via HART protocol • Burst Mode functionality

16.5   Power supply

Terminal assignment	→ 🖺 40

Supply voltage

Order code for "Power supply"	Terminal voltage		Frequency range
Option **D**	DC 24 V	±20%	–
Option **E**	AC 100 to 240 V	−15 to +10%	50/60 Hz
Option **I**	DC 24 V	±20%	–
	AC 100 to 240 V	−15 to +10%	50/60 Hz

Power consumption	**Transmitter**

Max. 10 W (active power)

switch-on current	Max. 36 A (<5 ms) as per NAMUR Recommendation NE 21

Current consumption	**Transmitter**

- Max. 400 mA (24 V)
- Max. 200 mA (110 V, 50/60 Hz; 230 V, 50/60 Hz)

Power supply failure	• Totalizers stop at the last value measured. • Depending on the device version, the configuration is retained in the device memoryor in the pluggable data memory (HistoROM DAT). • Error messages (incl. total operated hours) are stored.

Electrical connection	→ 🗎 48

Potential equalization	→ 🗎 54

terminals	Spring-loaded terminals: Suitable for strands and strands with ferrules. Conductor cross-section 0.2 to 2.5 mm² (24 to 12 AWG).

Cable entries	• Cable gland: M20 × 1.5 with cable ⌀ 6 to 12 mm (0.24 to 0.47 in)
	• Thread for cable entry:
	  • NPT ½"
	  • G ½"
	  • M20
	• Device plug for connecting cable: M12
	  A device plug is always used for the device version with the order code for "Sensor connection housing", option **C** "Ultra-compact, hygienic, stainless".

Cable specification	→ 🗎 36

16.6   Performance characteristics

Reference operating conditions	• Error limits based on ISO 11631 • Water with +15 to +45 ℃ (+59 to +113 ℉) at2 to 6 bar (29 to 87 psi) • Specifications as per calibration protocol • Accuracy based on accredited calibration rigs that are traced to ISO 17025.

ℹ️ To obtain measured errors, use the *Applicator* sizing tool → 🗎 184

Maximum measured error	o.r. = of reading; 1 g/cm³ = 1 kg/l; T = medium temperature

Base accuracy

Accuracy of outputs

The outputs have the following base accuracy specifications.

Current output

Accuracy	±5 µA

Pulse/frequency output
o.r. = of reading

Accuracy	Max. ±50 ppm o.r. (over the entire ambient temperature range)

Repeatability

o.r. = of reading; 1 g/cm³ = 1 kg/l; T = medium temperature

Base repeatability

Design fundamentals → 🖥 198

Mass flow and volume flow (liquids)

±0.05 % o.r.

Mass flow (gases)

±0.25 % o.r.

Density (liquids)

±0.00025 g/cm³

Temperature

±0.25 ℃ ± 0.0025 · T ℃ (±0.45 ℉ ± 0.0015 · (T−32) ℉)

Response time

The response time depends on the configuration (damping).

Influence of ambient temperature

Current output

Temperature coefficient	Max. 1 µA/℃

Pulse/frequency output

Temperature coefficient	No additional effect. Included in accuracy.

Influence of medium temperature

Mass flow and volume flow

o.f.s. = of full scale value
When there is a difference between the temperature for zero point adjustment and the process temperature, the additional measured error of the sensor is typically ±0.0002 % o.f.s./℃ (±0.0001 % o. f.s./℉).

The effect is reduced if zero point adjustment is performed at process temperature.

Density

When there is a difference between the density calibration temperature and the process temperature, the typical measured error of the sensor is
±0.00005 g/cm³ /℃ (±0.000025 g/cm³ /℉). Field density calibration is possible.

Wide-range density specification (special density calibration)

If the process temperature is outside the valid range (→ 🖹 195) the measured error is
±0.00005 g/cm³ /℃ (±0.000025 g/cm³ /℉)
1   Field density calibration, for example at +20 ℃ (+68 ℉)
2   Special density calibration

Temperature

±0.005 · T ℃ (± 0.005 · (T − 32) ℉)

| Influence of medium pressure | The table below shows the effect on accuracy of mass flow due to a difference between calibration pressure and process pressure. |

o.r. = of reading

ℹ️ It is possible to compensate for the effect by:
• Reading in the current pressure measured value via the current input.
• Specifying a fixed value for the pressure in the device parameters.

📖 Operating Instructions.

DN		[% o.r./bar]	[% o.r./psi]
[mm]	[in]		
1	¹⁄₂₄	−0.001	−0.00007
2	¹⁄₁₂	0	0

Temperature tables

ℹ️ Observe the interdependencies between the permitted ambient and fluid temperatures when operating the device in hazardous areas.

📖 For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

Storage temperature   −50 to +80 °C (−58 to +176 °F)

Climate class	DIN EN 60068-2-38 (test Z/AD)

Degree of protection	**Transmitter** • As standard: IP66/67, type 4X enclosure • When housing is open: IP20, type 1 enclosure • Display module: IP20, type 1 enclosure **Sensor** As standard: IP66/67, type 4X enclosure **External WLAN antenna** IP67

Vibration- and shock-resistance	**Vibration sinusoidal, in accordance with IEC 60068-2-6**
	
	Sensor
	• 2 to 8.4 Hz, 3.5 mm peak
	• 8.4 to 2 000 Hz, 1 g peak
	
	Transmitter
	• 2 to 8.4 Hz, 7.5 mm peak
	• 8.4 to 2 000 Hz, 2 g peak
	
	Vibration broad-band random, according to IEC 60068-2-64
	
	Sensor
	• 10 to 200 Hz, 0.003 g^2/Hz
	• 200 to 2 000 Hz, 0.001 g^2/Hz
	• Total: 1.54 g rms
	
	Transmitter
	• 10 to 200 Hz, 0.01 g^2/Hz
	• 200 to 2 000 Hz, 0.003 g^2/Hz
	• Total: 2.70 g rms
	
	Shock half-sine, according to IEC 60068-2-27
	
	• Sensor
	  6 ms 30 g
	• Transmitter
	  6 ms 50 g
	
	Rough handling shocks, according to IEC 60068-2-31

Mechanical load	Never use the transmitter housing as a ladder or climbing aid.

Electromagnetic compatibility (EMC)	As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21) 📖 Details are provided in the Declaration of Conformity.

16.9   Process

Medium temperature range	−50 to +205 °C (−58 to +401 °F)

Dependency of ambient temperature on medium temperature
⊞ 45   Exemplary representation, values in the table below.

T_a Ambient temperature range

T_m Medium temperature

A   Maximum permitted medium temperature T_m at $T_{a\,max}$ = 60 °C (140 °F); higher medium temperatures T_m
       require a reduced ambient temperature T_a

B   Maximum permitted ambient temperature T_a for the maximum specified medium temperature T_m of the
       sensor

Values for devices used in the hazardous area:
Separate Ex documentation (XA) for the device → 🖺 213.

Version	Not insulated				Insulated			
	A		B		A		B	
	T_a	T_m	T_a	T_m	T_a	T_m	T_a	T_m
Cubemass C 500 – digital	60 °C (140 °F)	205 °C (401 °F)	–	–	60 °C (140 °F)	90 °C (194 °F)	25 °C (77 °F)	205 °C (401 °F)
Cubemass C 500	60 °C (140 °F)	205 °C (401 °F)	–	–	60 °C (140 °F)	160 °C (320 °F)	55 °C (131 °F)	205 °C (401 °F)

Seals

For mounting sets with screwed-on connections:
• Viton: –15 to +200 °C (–5 to +392 °F)
• EPDM: –40 to +160 °C (–40 to +320 °F)
• Silicon: –60 to +200 °C (–76 to +392 °F)
• Kalrez: –20 to +275 °C (–4 to +527 °F)

Density	0 to 5 000 kg/m³ (0 to 312 lb/cf)
Pressure-temperature ratings	📖 An overview of the pressure-temperature ratings for the process connections is provided in the "Technical Information" document
Sensor housing	The sensor housing is filled with dry nitrogen gas and protects the electronics and mechanics inside.
Rupture disk	To guarantee the safety of the measuring device, the device version with a rupture disk with a triggering pressure of 10 to 15 bar (145 to 217.5 psi) is the standard version used. Special mounting instructions → 🖺 27.

| Flow limit | Select the nominal diameter by optimizing between the required flow range and permissible pressure loss. |

Select the nominal diameter by optimizing between the required flow range and permissible pressure loss.

For an overview of the full scale values for the measuring range, see the "Measuring range" section → 🖺 186

• The minimum recommended full scale value is approx. 1/20 of the maximum full scale value
• In most applications, 20 to 50 % of the maximum full scale value can be considered ideal
• A low full scale value must be selected for abrasive media (such as liquids with entrained solids): flow velocity < 1 m/s (< 3 ft/s).
• For gas measurement the following rules apply:
  • The flow velocity in the measuring tubes should not exceed half the sound velocity (0.5 Mach).
  • The maximum mass flow depends on the density of the gas: formula → 🖺 186

To calculate the flow limit, use the *Applicator* sizing tool → 🖺 184

| Pressure loss | To calculate the pressure loss, use the *Applicator* sizing tool → 🖺 184 |

| System pressure | → 🖺 25 |

16.10   Mechanical construction

| Design, dimensions | For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section. |

| Weight | All values (weight exclusive of packaging material) refer to devices with VCO couplings. |

Transmitter
• Proline 500 – digital polycarbonate: 1.4 kg (3.1 lbs)
• Proline 500 – digital aluminum: 2.4 kg (5.3 lbs)
• Proline 500 aluminum: 6.5 kg (14.3 lbs)
• Proline 500 cast, stainless: 15.6 kg (34.4 lbs)

Sensor
• Sensor with aluminum connection housing version: see the information in the following table
• Sensor with cast connection housing version, stainless: +3.7 kg (+8.2 lbs)

Weight in SI units

DN [mm]	Weight [kg]
1 to 6	3.5

Weight in US units

DN [in]	Weight [lbs]
$\frac{1}{24}$ to $\frac{1}{4}$	8

Materials	**Transmitter housing**

Transmitter housing

Housing of Proline 500 – digital transmitter

  - Flange ASME B16.5
  - Flange JIS B2220
  - NPT

Surface roughness   All data relate to parts in contact with fluid. The following surface roughness quality can be ordered.
Not polished

16.11   Human interface

Languages   Can be operated in the following languages:
- Via local operation
  English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Bahasa (Indonesian), Vietnamese, Czech, Swedish
- Via Web browser
  English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Bahasa (Indonesian), Vietnamese, Czech, Swedish
- Via "FieldCare", "DeviceCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese

Local operation	**Via display module**

Equipment:
- Order code for "Display; operation", option F "4-line, illuminated, graphic display; touch control"
- Order code for "Display; operation", option G "4-line, illuminated, graphic display; touch control + WLAN"

Information about WLAN interface → 🖹 82
🖾 47   Operation with touch control

1   Proline 500 – digital
2   Proline 500

Display elements

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: –20 to +60 °C (–4 to +140 °F)
  The readability of the display may be impaired at temperatures outside the temperature range.

Operating elements

- External operation via touch control (3 optical keys) without opening the housing: ⊞, ⊟, 𝔼
- Operating elements also accessible in the various zones of the hazardous area
Remote operation	→ 🖹 80

Service interface	→ 🖹 81

Supported operating tools	Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

Supported operating tools	Operating unit	Interface	Additional information
Web browser	Notebook, PC or tablet with Web browser	• CDI-RJ45 service interface • WLAN interface	Special Documentation for device → 🖺 213
DeviceCare SFE100	Notebook, PC or tablet with Microsoft Windows system	• CDI-RJ45 service interface • WLAN interface • Fieldbus protocol	→ 🖺 184
FieldCare SFE500	Notebook, PC or tablet with Microsoft Windows system	• CDI-RJ45 service interface • WLAN interface • Fieldbus protocol	→ 🖺 184
Device Xpert	Field Xpert SFX 100/350/370	HART fieldbus protocol	Operating Instructions BA01202S Device description files: Use update function of handheld terminal

Other operating tools based on FDT technology with a device driver such as DTM/iDTM or DD/EDD can be used for device operation. These operating tools are available from the individual manufacturers. Integration into the following operating tools, among others, is supported:

- FactoryTalk AssetCentre (FTAC) by Rockwell Automation → www.rockwellautomation.com
- Process Device Manager (PDM) by Siemens → www.siemens.com
- Asset Management Solutions (AMS) by Emerson → www.emersonprocess.com
- FieldCommunicator 375/475 by Emerson → www.emersonprocess.com
- Field Device Manager (FDM) by Honeywell → www.honeywellprocess.com
- FieldMate by Yokogawa → www.yokogawa.com
- PACTWare → www.pactware.com

The associated device description files are available at: www.endress.com → Downloads

Web server

Thanks to the integrated Web server, the device can be operated and configured via a Web browser and via a service interface (CDI-RJ45) or via a WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, status information on the device is also displayed and allows the user to monitor the status of the device. Furthermore the device data can be managed and the network parameters can be configured.

A device that has a WLAN interface (can be ordered as an option) is required for the WLAN connection: order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN". The device acts as an Access Point and enables communication by computer or a mobile handheld terminal.

Supported functions
Data exchange between the operating unit (such as a notebook for example) and the measuring device:

- Upload the configuration from the measuring device (XML format, configuration backup)
- Save the configuration to the measuring device (XML format, restore configuration)
- Export event list (.csv file)
- Export parameter settings (.csv file or PDF file, document the measuring point configuration)
- Export the Heartbeat verification log (PDF file, only available with the "Heartbeat Verification" application package)

- Flash firmware version for device firmware upgrade, for instance
- Download driver for system integration
- Visualize up to 1000 saved measured values (only available with the **Extended HistoROM** application package → 🖹 211)

📖 Web server special documentation → 🖹 213

HistoROM data management	The measuring device features HistoROM data management. HistoROM data management comprises both the storage and import/export of key device and process data, making operation and servicing far more reliable, secure and efficient.	

ℹ️ When the device is delivered, the factory settings of the configuration data are stored as a backup in the device memory. This memory can be overwritten with an updated data record, for example after commissioning.

Additional information on the data storage concept

There are different types of data storage units in which device data are stored and used by the device:

	Device memory	T-DAT	S-DAT
Available data	• Event logbook such as diagnostic events for example • Parameter data record backup • Device firmware package	• Measured value logging ("Extended HistoROM" order option) • Current parameter data record (used by firmware at run time) • Peakhold indicator (min/max values) • Totalizer values	• Sensor data: nominal diameter etc. • Serial number • Calibration data • Device configuration (e.g. SW options, fixed I/O or multi I/O)
Storage location	Fixed on the user interface board in the connection compartment	Attachable to the user interface board in the connection compartment	In the sensor plug in the transmitter neck part

Data backup

Automatic
- The most important device data (sensor and transmitter) are automatically saved in the DAT modules
- If the transmitter or measuring device is replaced: once the T-DAT containing the previous device data has been exchanged, the new measuring device is ready for operation again immediately without any errors
- If the sensor is replaced: once the sensor has been replaced, new sensor data are transferred from the S-DAT in the measuring device and the measuring device is ready for operation again immediately without any errors
- If exchanging the electronics module (e.g. I/O electronics module): Once the electronics module has been replaced, the software of the module is compared against the current device firmware. The module software is upgraded or downgraded where necessary. The electronics module is available for use immediately afterwards and no compatibility problems occur.

Manual
Additional parameter data record (complete parameter settings) in the integrated device memory HistoROM backup for:
- Data backup function
  Backup and subsequent restoration of a device configuration in the device memory HistoROM backup
- Data comparison function
  Comparison of the current device configuration with the device configuration saved in the device memory HistoROM backup

Data transfer

Manual

Transfer of a device configuration to another device using the export function of the specific operating tool, e.g. with FieldCare, DeviceCare or Web server: to duplicate the configuration or to store in an archive (e.g. for backup purposes)

Event list

Automatic
- Chronological display of up to 20 event messages in the events list
- If the **Extended HistoROM** application package (order option) is enabled: up to 100 event messages are displayed in the events list along with a time stamp, plain text description and remedial measures
- The events list can be exported and displayed via a variety of interfaces and operating tools e.g. DeviceCare, FieldCare or Web server

Data logging

Manual

If the **Extended HistoROM** application package (order option) is enabled:
- Record up to 1000 measured values via 1 to 4 channels
- User configurable recording interval
- Record up to 250 measured values via each of the 4 memory channels
- Export the measured value log via a variety of interfaces and operating tools e.g. FieldCare, DeviceCare or web server

16.12 Certificates and approvals

Currently available certificates and approvals can be called up via the product configurator.

CE mark	The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.
	Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
RCM-tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex approval	The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.
Functional safety	The measuring device can be used for flow monitoring systems (min., max., range) up to SIL 2 (single-channel architecture; order code for "Additional approval", option LA) and SIL 3 (multichannel architecture with homogeneous redundancy) and is independently evaluated and certified by the TÜV in accordance with IEC 61508.

The following types of monitoring in safety equipment are possible:
- Mass flow
- Volume flow
- Density

Functional Safety Manual with information on the SIL device → 🖺 213

HART certification	**HART interface**
	The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:
	• Certified according to HART 7
	• The device can also be operated with certified devices of other manufacturers (interoperability)
Radio approval	The measuring device has radio approval.
	For detailed information regarding radio approval, see Special Documentation → 🗎 213
Additional certification	**CRN approval**
	Some device versions have CRN approval. A CRN-approved process connection with a CSA approval must be ordered for a CRN-approved device.
	Tests and certificates
	• EN10204-3.1 material certificate, parts and sensor housing in contact with medium
	• Pressure testing, internal procedure, inspection certificate
	• PMI test (XRF), internal procedure, wetted parts, test report
Other standards and guidelines	• EN 60529
	Degrees of protection provided by enclosures (IP code)
	• IEC/EN 60068-2-6
	Environmental influences: Test procedure - Test Fc: vibrate (sinusoidal).
	• IEC/EN 60068-2-31
	Environmental influences: Test procedure - Test Ec: shocks due to rough handling, primarily for devices.
	• EN 61010-1
	Safety requirements for electrical equipment for measurement, control and laboratory use - general requirements
	• IEC/EN 61326
	Emission in accordance with Class A requirements. Electromagnetic compatibility (EMC requirements).
	• NAMUR NE 21
	Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment
	• NAMUR NE 32
	Data retention in the event of a power failure in field and control instruments with microprocessors
	• NAMUR NE 43
	Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.
	• NAMUR NE 53
	Software of field devices and signal-processing devices with digital electronics
	• NAMUR NE 105
	Specifications for integrating fieldbus devices in engineering tools for field devices
	• NAMUR NE 107
	Self-monitoring and diagnosis of field devices
	• NAMUR NE 131
	Requirements for field devices for standard applications
	• NAMUR NE 132
	Coriolis mass meter

16.13   Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Detailed information on the application packages:
Special Documentation for the device → 🔍 213

Diagnostics functions	Package	Description
	Extended HistoROM	Comprises extended functions concerning the event log and the activation of the measured value memory. Event log: Memory volume is extended from 20 message entries (standard version) to up to 100 entries. Data logging (line recorder): • Memory capacity for up to 1000 measured values is activated. • 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user. • Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.

Heartbeat Technology	Package	Description
	Heartbeat Verification +Monitoring	**Heartbeat Verification** Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment". • Functional testing in the installed state without interrupting the process. • Traceable verification results on request, including a report. • Simple testing process via local operation or other operating interfaces. • Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications. • Extension of calibration intervals according to operator's risk assessment. **Heartbeat Monitoring** Continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to: • Draw conclusions - using these data and other information - about the impact process influences (such as corrosion, abrasion, buildup etc.) have on the measuring performance over time. • Schedule servicing in time. • Monitor the process or product quality, e.g. gas pockets.

Concentration	Package	Description
	Concentration	**Calculation and outputting of fluid concentrations** The measured density is converted to the concentration of a substance of a binary mixture using the "Concentration" application package: • Choice of predefined fluids (e.g. various sugar solutions, acids, alkalis, salts, ethanol etc.) • Common or user-defined units (°Brix, °Plato, % mass, % volume, mol/l etc.) for standard applications. • Concentration calculation from user-defined tables.

Special density

Package	Description
Special density	Many applications use density as a key measured value for monitoring quality or controlling processes. The device measures the density of the fluid as standard and makes this value available to the control system. The "Special Density" application package offers high-precision density measurement over a wide density and temperature range particularly for applications subject to varying process conditions.

OPC-UA server

Package	Description
OPC-UA-Server	The application package provides the user with an integrated OPC-UA server for comprehensive instrument services for IoT and SCADA applications. 📖 Special Documentation for the "OPC-UA-Server" application package → 🖺 213.

16.14   Accessories

📖 Overview of accessories available for order → 🖺 182

16.15   Supplementary documentation

ℹ️ For an overview of the scope of the associated Technical Documentation, refer to the following:
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate

Standard documentation   **Brief Operating Instructions**

Brief Operating Instructions for the sensor

Measuring device	Documentation code
Proline Cubemass C	KA01217D

Brief Operating Instructions for transmitter

Measuring device	Documentation code
Proline 500 – digital	KA01315D
Proline 500	KA01314D

Technical Information

Measuring device	Documentation code
Cubemass C 500	TI01281D

Description of Device Parameters

Measuring device	Documentation code
Cubemass 500	GP01089D

Device-dependent additional documentation

Safety instructions
Safety instructions for electrical equipment for hazardous areas.
