

Level measurement

Product overview for applications in liquids and bulk solids

Endress+Hauser – Your partner

Endress+Hauser is a global leader in measurement instrumentation, services and solutions for industrial process engineering

With dedicated sales centers and a strong network of partners, Endress+Hauser guarantees competent worldwide support. Our production centers in twelve countries meet your needs and requirements quickly and effectively. The Group is managed and coordinated by a holding company in Reinach, Switzerland. As a successful family-owned business, Endress+Hauser is set to remain independent and self-reliant.

Endress+Hauser provides sensors, instruments, systems and services for level, flow, pressure and temperature measurement as well as analytics and data acquisition. The company supports you with automation engineering, logistics and IT services and solutions. Our products set standards in quality and technology.

We work closely with the chemical, petrochemical, food and beverage, oil and gas, water and wastewater, power and energy, life science, primary and metal, renewable energy, pulp and paper and shipbuilding industries. Endress+Hauser helps customers to optimize their processes in terms of reliability, safety, economic efficiency and environmental impact.

Competence center for level measurement

Endress+Hauser Maulburg is one of the leading producers of level and pressure instrumentation. The company employs more than 2,000 associates world-wide. Headquartered in Maulburg, near to the French and Swiss border, specialists in research, development and production of the sensors work there and in Stahnsdorf, close to Berlin. Associated Product Centers in Greenwood (USA), Suzhou (China), Yamanashi (Japan), Aurangabad (India) and Itatiba (Brazil) are responsible for customized final assembly and calibration of measuring instruments.

Level measurement – still leading the way

Constant product quality, plant safety and economic efficiency – these are important aspects for any level measuring point. Levels in liquids, pastes, bulk solids or liquefied gases are often measured in tanks, silos or movable containers. Examples come from all industry sectors from the chemical and petrochemical industries, the pharmaceutical and life sciences industries, water and wastewater or the food and energy industries.

The broad range of measuring principles available means that finding the ideal solution is easy. No principle is suited

to all application areas. Therefore measuring systems must be selected that work reliably under the conditions of a particular application and, at the same time, meet the economic situations in the future.

As the market leader in level measurement, we support you from planning and commissioning through to the maintenance of your measuring point. In addition, we assist you in automation, asset management and the visualization of process data.

Fuel for thought

With vast experience in the oil & gas sector, we help you to perform, comply and thrive

From exploration to refinery, from storage to distribution, from plant upgrades to new projects, we have the application expertise to help you succeed. At a time when the sector faces skills shortages and regulations tightening, our organization is here across the full life cycle of your project always with your deadlines in mind.

While complexity of facilities and processes are ever increasing, and downtime must be reduced, your competitiveness is enhanced with reliable, accurate and traceable asset information.

In short, you need to do more with less, benefiting from a stable partner who is here for the long haul and ready across the globe, offering:

- Assured plant safety
- Optimized return on investment
- Best-fit products, solutions and services

Advantages at a glance

- Mitigating risks by using state of the art technology meeting highest demands with regard to Functional Safety (IEC 61508) and mechanical integrity (e.g. gastight feedthrough)
- Minimizing operational costs through efficient proof testing concepts, predictive maintenance and innovative data management
- Meeting internationally recognized standards and recommendations such as: API, OIML, ASME, NORSOK, NACE etc.
- Increasing plant availability with innovative technologies particularly designed for oil and gas industry applications

Product highlights

Liquiphant FailSafe FTL81

FailSafe overfill prevention for any liquids

For use in hazardous areas and in applications with functional safety up to SIL 3 with one device.

Micropilot FMR51

Radar instrument for highest demands in level measurement

Maximum reliability even under extreme process conditions like high temperature and high pressure due to an innovative and patented sensor-design.

Density profiling solution

Optimization of extra heavy/heavy crude separation

Precise 3-dimensional density profile of the entire separator - from inlet to outlet. No more under/overdosing of expensive chemicals to the process.

Levellflex FMP55

The Multiparameter device is the innovation in interface measurement

Worldwide first combination of two different measuring principles in one device for reliable level and simultaneous interface layer measurement.

Deltabar FMD72

Electronic differential pressure system utilizing one transmitter and two sensor modules

Elimination of typical issues of traditional differential pressure measurement installations.

Micropilot S and Proservo

High precision gauges for custody transfer applications

NMi- and PTB-approvals and meeting the requirements according to OIML R85 and API 3.1B.

Levellflex Multiparameter

Employing SensorFusion, Levellflex FMP55 offers you the first combination of the capacitance and guided radar measuring principles in one instrument worldwide. The combination guarantees safe measured value acquisition even in emulsion layers with the simultaneous output of level and interface signals. This makes Levellflex FMP55 Multiparameter the standard in interface measurement.

This solution guarantees the highest degree of safety, precision and efficiency:

- Redundant interface measurement guarantees safe processes
- New, dynamic algorithms for the highest degree of measuring safety and precise measurements
- Multi-Echo Tracking: Increased echo rate and analysis as well as automatic interference echo suppression already during commissioning
- Intuitive, menu-guided operating concept (on-site or via the control system) in the respective national language decreases costs for training, maintenance and operation
- HistoROM: Data storage for instrument settings and measured values, so that you always have your parameters available
- Exact instrument and process diagnosis for fast decision-making support with clear instructions concerning corrective measures

Global chemicals, competitive and safe

Get the extra project skill and know-how you need to boost your plant's safe performance

You gain concrete benefits from a partner who has first-hand knowledge of your sector's issues around the globe: on increased safety, on environmental protection, on over-supply leading to cost pressure and on finding engineering support and service when required. You can rely on our help to become more competitive in your line of business.

With a long history of industry firsts we have grown with the sector by listening, acting and innovating to better serve you with:

- Safety, built in
- The technology to lead
- Best-fit project management

Advantages at a glance

- Meeting internationally recognized standards/ recommendations: NAMUR, WHG, ASME, NACE, IEC 17025, MID, OIML
- Internationally accepted hazardous area approvals: ATEX, IECEx, FM/CSA, NEPSI, TIIS, INMETRO
- Use of state of the art technology – functional safety according to IEC 61508 (up to SIL3)
- Uniform operating safety by design concepts for simple and safe operations
- Optimized material availability and minimized stocks through inventory management solutions

Product highlights

Liquiphant FTL51B

Failsafe overfill prevention with Heartbeat Technology

Developed according to IEC 61508 for SIL2/3 applications. Verification via Bluetooth for Heartbeat Technology without process interruptions in assembled conditions.

Levellflex FMP51

The standard sensor for highest demands in level measurement

For continuous level measurement of liquids, pastes and slurries but also for interface measurement.

Micropilot FMR62

80GHz radar for measurement in aggressive liquids

Improved focusing and smaller emitting angle, particularly in tanks with many baffles.

Deltabar FMD71/72

Electronic differential pressure system utilizing one transmitter and two sensors

Elimination of traditional mechanical issues resulting in greater process availability and reliability.

Micropilot FMR51

Radar sensor for highest demands in level measurement

Maximum reliability under extreme process conditions and due to Multi-Echo Tracking.

Gammapiot FMG50

Compact transmitter for radiometric measurement

The first compact two-wire transmitter ensures SIL ex factory. With Heartbeat Technology you get diagnostics and verify the device without process interruption and with legally watertight documentation.

i Electronic differential pressure measurement

Differential pressure measurement is frequently used for level measurement in pressurized vessels or vacuum tanks. Conventional differential pressure systems with impulse lines often suffer from problems including blockage, freezing, leaks and condensation. Even differential pressure systems with oil-filled capillaries reach their limits in applications with fluctuating ambient temperatures.

Our electronic differential pressure system, consisting of a transmitter and two sensor modules, offers tried and tested pressure sensor technology in a new and innovative manner. The transmitter calculates the pressure difference from both sensors and forwards the level, the volume or mass by 4 to 20mA to the control system. This increases reliability as well as safety and reduces costs.

Advantages:

- **Reliability:** The new electronic differential pressure system eliminates the problems of conventional mechanical systems and leads to higher measuring precision, process availability and reliability.
- **Safety:** Safety risks are minimized due to the design architecture of the new electronic differential system.
- **Cost efficiency:** Low overall operating costs due to shorter installation times, lower maintenance, less downtimes and low spare part requirements.

Extracting more from less

In a world of lower grades, skills gaps and excavation challenges - we can help you hit your targets

We've seen how lower grades are driving an acute need for ever-better automation and controls. You are also facing emerging skills gap, requiring better-informed industry partners.

At the same time, energy costs are only going one way, and the legislative environment is becoming increasingly stringent.

Tough challenges call for experienced heads who can:

- Reduce your metal and mineral production costs
- Keep your plant safe
- Boost compliance and responsibility

Advantages at a glance

- Complete product basket for all applications, specifically in harsh environments
- Advanced diagnostic functionalities to make the process more safe and reliable
- Savings in raw material, water, energy and labor through accurate data of critical and quality relevant points in your process

Product highlights

Micropilot FMR67

Level measurement with 80GHz technology for highest demands in bulk solids

Less tank wall effects and reduced interference with obstacles. Large measuring range up to 125m (410ft) possible.

Levellflex FMP57

For highest demands for continuous level measurement in bulk solids

Reliable measurement in narrow silos or bunkers. Unaffected by silo geometries, obstacles and the shape of angled surfaces.

Micropilot FMR57

For high demands in bulk solids level measurement

Highest reliability due to the innovative signal analysis Multi-Echo Tracking. Advanced diagnostic functions for process optimization and automatization.

Soliphant FTM51

Universal point level switch for fine-grained bulk solids

Robust point level switch for use in silos containing fine-grained or powdery solids even with a low bulk density. For use in dust or gas incensive hazardous areas.

Micropilot FMR52

For level measurement in aggressive liquids

For applications in aggressive liquids Micropilot FMR52 offers extraordinary advantages with its completely PTFE-filled flush-mounted horn antenna.

Gammapiilot FTG20

Geiger-Mueller counter for point level detection with separate transmitter

Even under extreme process conditions like high pressure, high temperature, corrosiveness, toxicity and abrasion, the radiometric measuring principle can be employed without any problems.

i Radar measurement in bulk solids

Micropilot FMR57 is the sensor for the high demands in bulk solids, optimally suited to measurements in high silos, bunkers or on stockpiles. Particularly the parabolic antenna facilitates very small emitting angles and thus the measurement in slim silos with lateral baffles. FMR57 may be used in applications up to 400°C without any problems thus also solving sophisticated measuring tasks.

The innovative signal analysis also uses historical silo data to strongly improve the reliability of the measurement. With the advanced diagnostic functionality in combination with the integrated air purge connection even strongly dust generating and build up producing media do not present any problems for the FMR57. Depending on the application the cost-effective FMR56 can be an attractive alternative.

Advantages:

- Optimum adaption to the surface of solids due to the sensor alignment
- Horn antenna or parabolic antenna to meet different emission angles
- Advanced Diagnostic to optimize and automatize the process, e.g. build-up detection

Nourishing your productivity

Your global partner for accurate measurements and expert support in food and beverages automation

From hygiene regulations and food safety to the basic demands of reliability and uptime, high quality food & beverage producers profit from our experience in more than 100 countries.

Get it right the first time and make your safe choice:

- Constant food quality & compliance
- Resources savings
- An expert partner

Advantages at a glance

- Complete basket of 3-A, FDA and EHEDG approved level measurement solutions
- Food safety and reliability due to instruments designed and manufactured specifically for all requirements in food & beverage industry
- Savings in raw material, water, energy and labor through accurate data of critical and quality relevant points in your process
- Optimized material availability and minimized stocks through inventory management solutions

Product highlights

Liquiphant FTL33

Most universal point level switch for all kinds of pumpable media
Fully welded and independent from medium and mounting position.

Liquipoint FTW33

Conductive point level detection
Perfect fit to the hygienic industry thanks to flush-mounted design and extended build-up compensation for reliable detection in sticky and pasty media.

Deltapilot FMB70

Highest performance pressure sensor with the Contite measuring cell
Made for level measurement in liquid and past-like media in open or closed containers and unaffected by possible foam formation.

Micropilot FMR52

Non-contact continuous level measurement for hygiene applications
3-A und EHEDG approvals. The measurement is not affected by changing media, temperature changes, gas blankets or vapors.

Liquicap FMI51

Continuous level measurement with capacitance probes provides fastest response times
For water based media the devices are already pre-calibrated ex works.

Liquipoint FTW23

Cost-effective point level switch
Fit for purpose in water based media.

Micropilot FMR62

80GHz radar for hygienic applications
Improved focusing and smaller emitting angle: particularly for small tanks and tanks with many baffles.

Liquitrend QMW43

Detect media and blending homogeneity quickly
With QMW43 you verify your cleaning process without opening the tank. You optimize your blending homogeneity and detect different media.

i The standard due to unique impermeability

In many food applications, the sensors are particularly strained by low temperatures. The air humidity condenses on cold surfaces. A temperature drop below the dew point at the sensor or sensor electronics might cause a breakdown. Periodic hot cleaning and the resulting pumping effect in the transmitter housing accelerate the process since the air humidity is constantly "drawn" into the transmitter housing from outside.

Deltapilot with the patented Contite measuring cell has been the transmitter for level and head pressure measurement in the food industry for years. The hermetically sealed measuring cell and the gas-tight glass feedthrough from the sensor cable to the electronic insert are unique and prevent the condensing air humidity from entering the measuring cell!

The pulse of life sciences

Trust a reliable partner who puts quality, compliance and cost control at the heart of life sciences

It is a daily task to meet stringent GxP regulations and productivity goals throughout your product lifecycle. You can count on our world-class instruments, designed to ASME-BPE standards, but also our highly qualified engineering input and experienced service teams. We partner with you to generate process optimization, higher plant availability and continuous improvement.

Our excellence, gained at the heart of the sector, will help you to:

- Streamline your projects
- Attain operational experience
- Make the right decisions

✓ Advantages at a glance

- Measurement instruments that fully comply with the numerous requirements, codes and standards, such as FDA, ISPE, GAMP, ASME-BPE, EU1935/2004, etc.
- Advanced diagnostics guarantees highest process safety and efficiency
- Products designed for high temperatures and pressures during CIP and SIP processes
- Delivery of products with all required approvals (material certificates for the process wetted parts, certificates of compliance, calibration certificates, surface roughness finish certificates, test reports, etc.)

Product highlights

Liquiphant FTL50H

Compact, hygienic point level switch with stainless steel housing

Used as overflow prevention system or for pump protection, ideally for storage tanks, mixing tanks and pipes.

Deltapilot FMB70

Hydrostatic pressure sensor with the Contite cell for level measurement

Condensate resistant Contite measuring cell and two-chamber housing. Unaffected by possible foam formation.

Levelflex FMP53

Continuous level measurement for hygienically sensitive applications

Meets all hygienic requirements according to ASME-BPE and USP Class VI. Unique in situ validation without dismantling from the process.

Micropilot FMR52

Non-contact continuous level measurement for hygienic applications

Certificates of compliance to ASME-BPE and USP Class VI. Measurement is not affected by changing media, temperature changes, gas blankets or vapors.

Liquipoint FTW33

Conductive point level detection

Perfect fit to the hygienic industry thanks to flush-mounted design and extended build-up compensation for reliable detection in sticky and pasty media.

Micropilot FMR62

80GHz radar for hygienic applications

Improved focusing and smaller emitting angle: particularly for small tanks and tanks with many baffles.

i Guided radar in bioprocesses

Level measurement in bioprocesses is quite demanding on the instrumentation. Changing densities, temperature shocks, hygiene requirements, continually moist surfaces and foam formation with different consistencies may not impair the instrument.

We successfully launched the new Levelflex instrument generation for guided radar in 2010. In this family, the constructive design of the Levelflex FMP53 instrument type has been particularly devised for the highest hygiene requirements in the life sciences industry. The instrument complies with the ASME-BPE recommendations.

The mode of operation is independent on density and thus the guided radar measurement is optimally suited to this application. The small vessels frequently found in bioprocesses prompted optimizing of the measuring method. Consequently, the level may now be safely acquired in a 10 liter vessel. Employing Multi-Echo Tracking – for the reliable measurement even in sophisticated measuring tasks – as well as HistoROM for an easy exchange of electronics without any additional aids, Levelflex increases availability and reduces costs. The operator is pleased with the additional simplification of calibration due to the possibility of verification in assembled conditions. The availability of all hygiene process connections facilitates engineering and planning.

Water is our life

Water quality, discharges, regulations, the environment... just rely on a trusted partner

As budgets shrink and legislative demands soar, we bring expertise for challenging needs. Safe potable water... discharges, environmental penalties... water infrastructure for developing countries... energy monitoring... the rising quantities of sludge from wastewater treatment and the opportunities they create for biogas. We make sense of it all, with experienced thinking supported by process technology solutions for your every need.

Through working with water in over 100 countries, Endress+Hauser offers a refreshing alternative.

- Improve plant safety and availability
- Optimize costs in your internal water processes
- Support your risk and failure management

Advantages at a glance

- Cost-effective product and service portfolio for any applications, e.g. for drinking water, wastewater and sewage, desalination
- Meeting internationally recognized standards/ recommendations for drinking water applications
- Highest efficiency by easy commissioning, operation and maintenance of instruments

Product highlights

Prosonic FMU90/FDU90

Ultrasonic sensor for level and flow measurement

Measurement is unaffected by dielectric constant, density or humidity and also unaffected by build-up due to the self-cleaning effect of sensors.

Waterpilot FMX167

Reliable and robust level probe with ceramic measuring cell

Certified for drinking water with a robust ceramic sensor and integrated temperature measurement. Also for usage in wastewater and salt water applications.

Micropilot FMR10/FMR20

Basic radar for liquid level applications

For non-contact level and flow measurement, e.g. basins, channels, river monitoring. With *Bluetooth®* commissioning, operation and maintenance app.

Liquicap FMI52

Continuous level and interface measurement

Reliable rope probe for continuous level monitoring in liquids, particularly in small tanks, build-up forming media and extremely high temperatures.

Micropilot FMR50

Radar for liquid level applications

Used for continuous, non-contact level measurement of liquids, pastes and slurries. Not affected by changing media, temperature changes, gas blankets or vapors.

Deltapilot FMB53

Hydrostatic pressure sensor with Contite measuring cell

Hermetically sealed Contite measuring cell with condensate-resistance, high reference accuracy and minimum temperature effects.

i Radar measurement in water and wastewater applications

Radar technology is particularly suited to continuous measurement of levels in water and wastewater applications. Temperature fluctuations do not impair the measurement of the non-contact and free of maintenance devices.

Especially the new Micropilot FMR10 and FMR20 offering best application fit for level measurement in storage tanks, open basins, pump/lift stations or in the sewer management. Commissioning, operation and maintenance is possible via *Bluetooth®* wireless technology with the Endress+Hauser SmartBlue app or via HART. The most compact radar in class fits also in limited space applications due to its unique chip design.

Advantages:

- Long sensor lifetime thanks to full PVDF body
- Hermetically sealed wiring and fully potted electronics eliminating water ingress and allows operation under harsh environmental conditions
- Best price-performance-radar

Power up your plant

Power plants play a vital role. We help minimize downtime whilst delivering safety and productivity

Your plant needs a multi-skilled, versatile partner. You need reliable solutions that meet your application requirements and industry quality standards. And you may need to upgrade ageing plants with proven and state-of-the-art technologies, to keep the output consistently high. As the industry shifts towards natural gas, renewables and the new market dynamics driven by shale gas, our mission is to provide the all-round support and experience you need.

This includes elevated standards of safety for your staff. And the ability to meet even-higher environmental demands in flue gas cleaning processes such as SCR catalysts for nitrogen oxide reduction, electrostatic precipitators (ESPs) for particle separation, and limestone scrubbing processes for desulphurization.

When you choose us, you:

- Boost the efficiency of your plant
- Heighten safety
- Maintain expertise

Advantages at a glance

- Functional safety: IEC 61508 SIL2/3 certified
- EN12952-11 (water tube boiler), EN12953-09 (shell type boiler) for guided radar instruments and DP transmitter
- Intelligent instruments with continuous self-monitoring
- Pressure directives such as PED, AD2000, CRN, EN13480
- Minimized downtime and highest safety through modern instrumentation

Product highlights

Micropilot FMR67

Level measurement with 80GHz technology for highest demands in bulk solids

Less tank wall effects and reduced interference with obstacles. Large measuring range up to 125m (410ft) possible.

Levellflex FMP54

Guided radar for high temperature and high pressure applications

Integrated ceramic-graphite seal safeguards reliable level measurement in steam boilers up to 450°C / 400bar.

Micropilot FMR57

For highest demands in bulk solids level measurement up to 400°C

Highest reliability due to the innovative signal analysis Multi-Echo Tracking. Advanced diagnostic functions for process optimization and automatization.

Liquiphant FTL70

Point level switch for liquids in high-temperature applications

For high process temperatures up to 280°C and can be used for Safety Instrumented Systems up to SIL2, in homogeneous redundancy up to SIL3. Integrated second line of defense offers the highest degree of safety.

Solicap FTI77

Point level detection for bulk solids, especially for high temperatures and strong mechanical loads

Sword/rope probe for point level detection up to 400°C of fine-grained to coarse-grained bulk solids, such as fly ash.

Guided radar for extreme conditions

Levellflex FMP54 is predestined for level measurement in liquids under extreme conditions. The design of the process connection with a ceramic-graphite seal guarantees safe processes both in high temperatures and pressures as they occur in steam boilers and in toxic media, e.g. ammonia. The second gas-tight feedthrough guarantees additional safety. For steam boiler applications, Levelflex FMP54 offers the option of a gas phase compensation. This feature guarantees safe and precise level measurement even under the highest process pressures. In case of gas phases in a steam boiler, conventional guided radar devices determine measured values which are strongly deviating from the actual level. Only the gas phase compensation of Levelflex provides you with reliable and precise measuring results if gas and steam phases or high pressures occur.

Advantages:

- SIL2 according to IEC 61508, SIL3 in case of homogeneous redundancy
- The easiest verification test for SIL and WHG worldwide
- High diffusion resistance due to ceramic coupling and graphite seal
- Resistant against steam
- Available with rod, rope and coax probe

Overview of measuring principles

	Description	Measuring principle		
Continuous level measurement in liquids	We offer a number of most varied measuring principles for continuous level measurement in liquids. Continuous level measurement in liquids

Choose the measuring principle which fits best for your application

Radar

Micropilot works with either pulses or with Frequency Modulated Continuous Wave (FMCW). Pulse: High-frequency radar pulses which are emitted by an antenna and reflected from the product surface. The time between pulse launching and receiving is measured and analyzed by the instrument and constitutes a direct measure for the distance between the antenna and the surface of the medium. FMCW: Works with an FMCW continuous electromagnetic wave which is emitted from an antenna and reflected by the product surface. The frequency change " Δf " is measured and the time and distance are calculated.

Advantages

- Non-contact, maintenance-free measurement
- Unaffected by medium properties like density and conductivity
- For high temperatures up to +450°C/+842°F

Guided radar

Levelflex works with high-frequency radar pulses which are guided along a probe. As the pulse impacts the medium surface, the characteristic impedance changes and part of the emitted pulse is reflected. The time between pulse launching and receiving is measured and analyzed by the instrument and constitutes a direct measure for the distance between the process connection and the product surface.

Advantages

- Reliable measurement
- Unaffected by medium surfaces and tank obstacles
- Additional measuring safety through End-of-Probe (EoP) recognition

Ultrasonics

Prosonic is based on the Time-of-Flight principle. A sensor emits ultrasonic pulses, the surface of the media reflects the signal and the sensor detects it again.

The Time-of-Flight of the reflected ultrasonic signal is directly proportional to the distance traveled. With the known tank geometry the level can be calculated.

Advantages

- Non-contact, maintenance-free measurement
- Unaffected by product properties
- Calibration without filling or discharging
- Self-cleaning effect due to vibrating sensor diaphragm

Hydrostatics

Hydrostatic level measurement in open tanks is based on the determination of the hydrostatic pressure which is generated by the height of the liquid column.

The obtained pressure is thus a direct measure for the level. In closed, pressurized tanks, the hydrostatic pressure of the liquid column causes a difference in pressure.

✓ Advantages

- Unaffected by surface foam
- Unaffected by tank obstacles/tank geometries
- Simple engineering
- Established technology

Capacitance

The principle of capacitive level measurement is based on the capacitance change of a capacitor. The probe and the tank wall form a capacitor whose capacitance is dependent on the amount of product in the tank: An empty tank has a lower, a filled tank a higher capacitance.

✓ Advantages

- Tried and tested
- Universally adaptable probe
- Reliable operation also in strong build-up formation and viscous media

Radiometry

The gamma source, a cesium or cobalt isotope, emits gamma radiation which is attenuated as it passes through materials. The measuring effect results from the absorption of radiation by the product to be measured which is caused by level changes. The measuring system consists of a source, a source container and a compact transmitter as a receiver.

✓ Advantages

- Non-contact measurement from outside
- Made for extreme measuring tasks where other principles fail

Servo

A small displacer is accurately positioned in a liquid medium using a servo motor. The displacer is then suspended on a measuring wire which is wound onto a finely grooved drum housing. When the displacer is lowered and touches a liquid, the weight of the displacer is reduced by liquid buoyancy force. As a result, torque in the magnetic coupling changes, which is measured by 5 sets of Hall sensors.

✓ Advantages

- Unaffected by medium properties like conductivity or dielectric constant
- Custody transfer applications

Radar – the Micropilot

Radar level measurement is a safe solution for liquids under extreme process conditions (pressure, temperature) and vapors. The Micropilot can also be used in hygienic applications for non-contact level measurement.

The Micropilot portfolio for applications in liquids

1

Micropilot FMR10/FMR20

Basic model for level liquid applications

- Temperature: -40 up to +80°C (-40 up to +176°F)
- Pressure: -1 to +3bar (-14.5 to +43psi)
- Measuring range: up to 20m (66ft)

2

Micropilot FMR60

For common applications in liquid level measurement with 80GHz technology

- Temperature: -40 to +130°C (-40 to +266°F)
- Pressure: Vacuum to +16bar (vacuum to +232psi)
- Measuring range: up to 50m (164ft)

3

Micropilot FMR62

For level measurement in aggressive liquids or applications with hygiene requirements with 80GHz technology

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: Vacuum to +25bar (vacuum to +362psi)
- Measuring range: up to 80m (262ft)

4

Micropilot FMR50

Radar for level liquid applications

- Temperature: -40 to +130°C (-40 to +266°F)
- Pressure: -1 to +3bar (-14.5 to +43.5psi)
- Measuring range: up to 30m (98ft), up to 40m (131ft) with advanced dynamics

5

Micropilot FMR51

The standard sensor for highest demands in liquid level measurement

- Temperature: -196 to +450°C (-321 to +842°F)
- Pressure: -1 to +160bar (-14.5 to +2,320psi)
- Measuring range: up to 40m (131ft), up to 70m (229ft) with advanced dynamics

6

Micropilot FMR52

For level measurement in aggressive liquids or applications with hygiene requirements

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: -1 to +16bar (-14.5 to +232psi)
- Measuring range: up to 40m (131ft), up to 60m (197ft) with advanced dynamics

7

Micropilot FMR53

For simple level measurement applications in liquids

- Temperature: -40 to +150°C (-40 to +302°F)
- Pressure range: -1 to +40bar (-14.5 to +580psi)
- Measuring range: up to 20m (65ft)

8

Micropilot FMR54

For level measurement in liquids where strong steam or ammonia can occur

- Temperature: -60 to +400°C (-76 to +752°F)
- Pressure: -1 to +160bar (-14.5 to +2,320psi)
- Measuring range: 20m (65ft)

Advantages at a glance

- Hardware and software developed according to IEC 61508 for SIL2 (Min./Max. range) respectively SIL3 (homogeneous redundancy)
- Highest process safety due to Multi-Echo Tracking evaluation
- Non-contact measurement, free of wear and tear, that can be used in extreme process conditions
- Heartbeat Technology for a cost-effective and safe plant operation during the entire life cycle
- Safe measurement in vessels with changing products
- Reliable measurement due to advanced dynamics signal strength

Guided radar – the Levelflex

Guided radar pulse measurement is well suited to liquids. The surface condition of the medium is of minor importance due to the safe guidance of the reflected waves. Reliable measurement is also safeguarded in turbulent liquid surfaces or foam formation. Guided radar is also first choice for interface measurement.

The Levelflex portfolio for applications in liquids

1

2

3

4

5

6

1

Levelflex FMP50

For all basic level applications in liquids

- Temperature: -20 to +80°C (-4 to +176°F)
- Pressure: up to +6bar (up to 87psi)
- Measuring range: rod up to 4m (13ft), rope up to 12m (40ft)

2

Levelflex FMP51

The standard sensor for highest demands in liquid level measurement

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: up to +40bar (up to +580psi)
- Measuring range: rod up to 10m (33ft), rope up to 45m (148ft), coax up to 6m (20ft)

3

Levelflex FMP52

Coated probe for use in aggressive liquids

- Temperature: -50 to +200°C (-58 to +392°F)
- Pressure: up to +40bar (up to +580psi)
- Measuring range: rod up to 4m (13ft), rope up to 45m (148ft)

4

Levelflex FMP53

For the highest hygiene requirements in the food and life sciences industry

- Temperature: -20 to +150°C (-4 to +302°F)
- Pressure: up to +16bar (up to +232psi)
- Measuring range: rod up to 6m (20ft)

5

Levelflex FMP54

For high temperature and high pressure applications in the oil & gas, chemical and power industry

- Temperature: -196 to +450°C (-320 to +842°F)
- Pressure: up to +400bar (up to +5,800psi)
- Measuring range: rod up to 10m (33ft), rope up to 45m (148ft), coax up to 6m (20ft)

6

Levelflex FMP55

The Multiparameter device is the innovation in interface measurement

- Temperature: -50 to +200°C (-58 to +392°F)
- Pressure: up to +40bar (up to +580psi)
- Measuring range: rod up to 4m (13ft), rope up to 10m (33ft), coax up to 6m (20ft)

Advantages at a glance

- Hard- and software developed according to IEC 61508 for SIL2 (Min./range) respectively SIL3 (homogeneous redundancy)
- Highest process safety due to Multi-Echo Tracking evaluation
- Reliable measurement in liquids with turbulent surfaces and foam formation
- Simple commissioning due to precalibrated sensor
- Heartbeat Technology for a cost-effective and safe plant operation during the entire life cycle
- Ideally for the direct replacement of displacers in existing displacer chamber

Ultrasonic – the Prosonic

The ultrasonic method is a tried and tested, as well as cost-effective solution for level measurement in liquids. Instruments are available as compact or separate versions. This measuring principle is characterized by easy planning and assembly, fast and safe commissioning, a long service life and reduced maintenance costs. Typical applications include abrasive and aggressive media, even in rough ambient conditions, but also tasks in water and wastewater engineering.

The Prosonic portfolio for applications in liquids

1

Prosonic FMU30

Two-wire instrument for continuous non-contact level and flow measurement

- Temperature: -20 to +60°C (-4 to +140°F)
- Pressure: +0.7 to +3bar (10 to +44psi)
- Measuring range: Sensor 1½" up to 5m (16ft), Sensor 2" up to 8m (26ft)

2 3 4 5 6

Prosonic FMU40/41/42/43/44

Two-wire or four-wire instrument for continuous non-contact level and flow measurement

- Temperature: -40 to +80°C (-40 to +176°F)
- Pressure: +0.7 to +3bar (10 to +44psi)
- Measuring range: up to 20m (16 to 66ft)

7

8

9

10

7 8 10

Prosonic FDU90/91/92

Sensors for continuous, non-contact level measurement

- Temperature: -40 to +95°C (-40 to +203°F)
- Pressure: +0.7 to +4bar (+10 to +58psi)
- Measuring range: up to 25m (9.8 to 82ft)

9

Prosonic FDU91F

Hygienic sensor for continuous, non-contact level measurement

- Temperature: -40 to +105°C (-40 to +221°F), CIP: 30 min. +135°C (+275°F)
- Pressure: +0.7 to +4bar (+10 to +58psi)
- Measuring range: up to 10m (33ft)

11

Prosonic FMU90

Transmitter in housing for field or top hat rail mounting for up to 2 sensors

- Calculations: Average, difference, sum
- Ambient temperature: -40 to +60°C (-40 to +140°F)
- Accuracy: ±2mm (0.08") + 0.17% of the measured distance

Advantages at a glance

- Unaffected by product properties, e. g. dielectric constant or density
- Easy and fast commissioning due to preset application parameters
- Calibration without filling or discharging

Hydrostatic – the Waterpilot, the Deltapilot, the Deltabar

Hydrostatic pressure sensors for level measurement may be used in almost all liquid media, from water through to pastes and sludges. Even under difficult process conditions, these sensors may be adjusted to the application in an optimum fashion. Differential pressure transmitters are used for level measurement in pressurized tanks and also in abrasive and corrosive media.

The Waterpilot, Deltapilot and Deltabar portfolio for applications in liquids

1 2

Waterpilot FMX167/FMX21

Reliable and robust level probe with ceramic measuring cell

- Temperature: -10 to +70°C (-14 to +158°F)
- Measuring range: +0.1 to +20bar (+1.45 to +300psi)
- Accuracy: Standard $\pm 0.2\%$, "Platinum" $\pm 0.1\%$

3 4 5 6

Deltapilot FMB50/51/52/53

Pressure sensor with Contite cell for hydrostatic level measurement in liquid and paste-like media

- Temperature: -10 to +100°C (14 to 212°F)
- Measuring range: +100mbar to +10bar (+1.5 to +150psi)
- Accuracy: Standard $\pm 0.2\%$, optional $\pm 0.1\%$

7

Deltapilot FMB70

Highest performance pressure sensor with Contite cell for hydrostatic level measurement in liquids

- Temperature: -10 to +100°C (-14 to +212°F) (+135°C (+275°F) for 30min. max)
- Measuring range: +0.1 to +10bar (+1.5 to +150psi)
- Accuracy: Standard $\pm 0.1\%$, optional $\pm 0.075\%$

8

Deltabar PMD55

Differential pressure transmitter with metal sensor for measurement of pressure differences

- Temperature: -40 to +85°C (-40 to +185°F)
- Measuring range: +10mbar to +40bar (+0.15 to +600psi)
- Accuracy: $\pm 0.1\%$, "Platinum" $\pm 0.075\%$

9

Deltabar PMD75

Differential pressure transmitter with metal sensor for measurement of pressure differences

- Temperature: -40 to +120°C (-40 to +248°F)
- Measuring range: +10mbar to +40bar (+0.15 to +600psi)
- Accuracy: Standard $\pm 0.05\%$, "Platinum" $\pm 0.035\%$

10

Deltabar FMD71/72

Electronic differential pressure system utilizing two ceramic sensor modules and one transmitter

- Temperature: -40 up to +150°C (-40 up to +302°F)
- Measuring range: +100mbar up to +40bar (+1.5 up to +600psi)
- Accuracy: $\pm 0.075\%$ single sensor, "Platinum" $\pm 0.05\%$ single sensor

11

Deltabar FMD77

Differential pressure transmitter with one diaphragm seal for level measurement

- Temperature: -40 to +400°C (-40 to +752°F)
- Measuring range: +100mbar to +16bar (+1.5 to +240psi)
- Accuracy: $\pm 0.075\%$ + influence of diaphragm seal

12

Deltabar FMD78

Differential pressure transmitter with metal sensor Metallsensor for differential pressure and level

- Temperature: -40 to +400°C (-40 to +752°F)
- Measuring range: +100mbar to +40bar (+1.5 to +600psi)
- Accuracy: $\pm 0.075\%$ + influence of diaphragm seal

Advantages at a glance

- Established measuring principle for temperatures up to 400°C (752°F) and pressures up to 400bar (5,800psi)
- Easy engineering
- Unaffected measurement with tank baffles or surface foam
- Hygiene instrument designs

Capacitance – the Liquicap

Capacitance level measurement covers a wide range of applications which are not limited to process engineering. Simple and cost-effective probes offer a wealth of possibilities for level monitoring in liquids, particularly in small tanks, build-up forming media and extremely high temperatures. Certain interface measurements can also be solved with capacitance probes. Capacitance probes can also be used in processes with fast changes in the tank level.

The Liquicap portfolio for applications in liquids

1

2

3

1

Liquicap FMI21

For continuous level measurement in conductive liquids

- Temperature: -40 to +100°C (-40 to +212°F)
- Pressure: Vacuum to +10bar (vacuum to +145psi)
- Measuring range: up to 2.5m (8ft)

2

Liquicap FMI51

For continuous level and interface measurement in liquids

- Temperature: -80 to +200°C (-112 to +392°F)
- Pressure: Vacuum to +100bar (vacuum to +1,450psi)
- Measuring range: 0.1 to 4.0m (0.3 to 13ft)

3

Liquicap FMI52

For continuous level and interface measurement in liquids - for large measuring ranges

- Temperature: -80 to +200°C (-112 to +392°F)
- Pressure: Vacuum to +100bar (vacuum to +1,450psi)
- Measuring range: 0.42 to 10.0m (1.38 to 33ft)

Advantages at a glance

- Accurate measurement in small tanks
- Short response times
- Measurement from probe end to process connection, no blocking distance
- Technology proved in millions of applications
- Interface measurement independent of emulsion layers

Radiometry – the Gammapilot

Radiometric instrumentation is used where other measuring principles can not be used anymore due to extreme process conditions or because of mechanical, geometric or construction conditions. Besides continuous level measurement, the Gammapilot can be used for point level detection, interface and density measurement.

The Radiometry portfolio for applications in liquids

1

Gammapilot FMG50

The compact two-wire compact transmitter for point level detection, continuous level, interface and density measurement

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

2

Gamma Modulator FHG65

Effective suppression of background and extraneous radiation at the Gammapilot FMG60

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

3

Source container FQG60

Radiation source container with radiation source insert with manual switch-on and switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

4 5

Source container FQG61/62

Radiation source container with source holder for manual or pneumatic switch-on/switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

6

Source container FQG63

Lightweight radiation source container with flexible extension element

- Temperature: -52 to +200°C (-62 to +392°F) (ambient), up to +400°C (+752°F) (process)
- Pressure: No limitation (non-invasive, extraneous)

7

Source container FQG66

Radiation source container with sliding source support rod for manual or pneumatic on/off switching

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

Advantages at a glance

- Four measuring tasks in one measuring principle
- Non-contact, external measurement for the highest degree of safety and reliability under the most extreme process conditions
- Functional safety up to SIL2/3 according to IEC 61508
- Overfill prevention WHG

Servo and Radar for custody transfer

Our tank gauging instruments are used for custody transfer and inventory control applications with NMI- and PTB-approvals and meet the requirements according to OIML R85 and API 3.1B.

The Proservo for applications in liquids

1

Micropilot NMR81

Drip-off lens antenna with 80GHz transmitting frequency for free-space custody transfer applications with NMI and PTB approvals

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: Vacuum to +16bar (Vacuum to +232psi)
- Measuring range: up to 70m (230ft)

2

Micropilot NMR84

Drip-off planar antenna with 6GHz transmitting frequency for custody transfer stilling well applications with NMI and PTB approvals

- Temperature: -40 to +150°C (-40 to +302°F)
- Pressure: Vacuum to +25bar (Vacuum to +362psi)
- Measuring range: up to 40m (131ft)

3

Proservo NMS80/81

High precision servo measurement for liquid level, interface and density profiling

- Temperature: -200 to +200°C (-328 to +392°F)
- Pressure: 0 to +6bar (0 to +87psi)/0 to +25bar (0 to +362psi)
- Measuring range: up to 36m (118ft)

4 5

Micropilot FMR530/533

6GHz high accuracy pulse radar for custody transfer free-space applications with NMI and PTB approvals

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: Vacuum to +64bar (vacuum to +928psi)
- Measuring range: 25 to 40m (82 to 131ft)

6

Micropilot FMR532

6GHz high accuracy pulse radar for custody transfer applications in stilling wells with NMI and PTB approvals

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: Vacuum to +64bar (vacuum to +928psi)
- Measuring range: 25 to 40m (82 to 131ft)

7

Micropilot FMR540

26GHz high accuracy pulse radar for custody transfer free-space applications with NMI and PTB approvals

- Temperature: -40 to +200°C (-40 to +392°F)
- Pressure: Vacuum to +16bar (vacuum to +232psi)
- Measuring range: up to 40m (131ft)

Advantages at a glance

- Hardware and software developed according to IEC 61508 up to SIL3 (in homogeneous redundancy) for high level of safety
- Maximum reliability through accuracy up to $\pm 0.4\text{mm}$ ($\pm 0.02''$)
- Developed according to international metrology recommendations such as OIML R85 and API MPMS
- Local and country-specific certifications like NMI or PTB for custody transfer applications
- Simplified installation and trouble-free operations due to easy connection to major DCS systems via open protocols

Continuous level measurement in bulk solids

Choose the measuring principle which fits best for your application.

Radar

Micropilot works with either pulses or with Frequency Modulated Continuous Wave (FMCW). Pulse: High-frequency radar pulses which are emitted by an antenna and reflected from the product surface. The time between pulse launching and receiving is measured and analyzed by the instrument and constitutes a direct measure for the distance between the antenna and the surface of the medium. FMCW: Works with an FMCW continuous electromagnetic wave which is emitted from an antenna and reflected by the product surface. The frequency change " Δf " is measured and the time and distance are calculated.

Advantages

- Non-contact, maintenance-free measurement
- Unaffected by product properties like density
- Unaffected by temperature, filling noise and dust development
- Unaffected by vessel materials
- Freely adjustable measuring range

Guided radar

Levellflex works with radar pulses guided along a probe. As the pulses meet the medium surface, part of the emitted pulse is reflected due to a change of the DC value between the air and the medium. The time between pulse launching and receiving is measured and analyzed by the instrument and constitutes a direct measure for the distance between the process connection and the product surface.

Advantages

- Unaffected by product surface (e. g. angled surface)
- Unaffected by baffles in the silo
- Additional safety for measurements by End-of-Probe evaluation
- Safe measurements also during filling

Ultrasonics

Prosonic works with ultrasonic pulses which are emitted by a sensor, reflected by the surface of the medium due to a change of the density between the air and the medium and again acquired by the sensor. The required Time-of-Flight is a measure for the distance travelled in the empty part of the silo. This value is deducted from the overall height of the silo to yield the level.

Advantages

- Non-contact, maintenance-free measurement
- Unaffected by product properties, e. g. DC value, density, etc.
- Calibration without filling or discharging
- Self-cleaning effect
- Cost-effective instrumentation for silo farms with FMU95 multichannel system

Electromechanical level system

A weight is lowered on a measuring tape. As it meets the surface of the bulk solids, the tensile force of the weight is reduced. This change is recognized, the instrument reverses the sense of rotation of the motor and rewinds the tape. A pulse generator counts the rotations in a non-contact manner as the weight is lowered. Each counted pulse corresponds to an exactly defined distance. If this distance is deducted from the overall distance (height of the vessel), the level results.

Radiometry

The gamma source, a cesium or cobalt isotope, emits gamma radiation which is attenuated as it passes through materials. The measuring effect results from the absorption of radiation by the product as the level changes. The measuring system consists of a source, source container and a compact transmitter as a receiver.

Radar – the Micropilot

Radar level measurement is a safe solution under extreme process conditions and vapors. The development of this measuring principle led to its use in bulk solid applications, since it is unaffected by dust and noise.

The Micropilot portfolio for applications in bulk solids

1

2

3

1

Micropilot FMR56

Economically efficient basic model for level measurement in solids

- Temperature: -40 to +80°C (-40 to +176°F)
- Pressure: up to +3bar (up to +43.5psi)
- Measuring range: up to 30m (98ft)

2

Micropilot FMR57

The sensor for high demands in bulk solids level measurement

- Temperature: -40 to +400°C (-40 to 752°F)
- Pressure: up to +16bar (up to +232psi)
- Measuring range: up to 70m (230ft)

3

Micropilot FMR67

For highest demands in bulk solids. Level measurement with 80GHz technology

- Temperature: -40 to +200°C (-40 to 392°F)
- Pressure: Vacuum to +16bar (Vacuum to +232psi)
- Measuring range: up to 125m (410ft)

Advantages at a glance

- Hard- and software developed according to IEC 61508 for SIL2 (Min./ Max. range) respectively SIL3 (homogeneous redundancy)
- Highest process safety due to Multi-Echo Tracking evaluation
- Non-contact measurement, free of wear and tear, that can be used in extreme process conditions
- Vapors or dusts do not affect the measurement
- Safe measurement in silos with changing product
- Reliable measurement due to advanced dynamics signal strength
- Heartbeat Technology for a cost-effective and safe plant operation during the entire life cycle

Guided radar – the Levelflex

Guided radar pulse measurement is well suited to bulk solids. The surface condition of the medium is of minor importance due to the safe guidance of the reflected waves. Different angled surfaces or outflow funnels, as they occur in bulk solids, do not influence measurement.

The Levelflex portfolio for applications in bulk solids

1

Levelflex FMP56

Economically efficient basis model for all level applications in bulk solids

- Temperature: -40 to +120°C (-40 to +248°F)
- Pressure: up to +16bar (up to +232psi)
- Measuring range: up to 12m (39ft)

2

Levelflex FMP57

The sensor for highest demands for level measurement in bulk solids

- Temperature: -40 to +185°C (-40 to +365°F)
- Pressure: up to +16bar (up to +232psi)
- Measuring range: rod up to 4m (13ft), rope up to 45m (148ft)

Advantages at a glance

- Hard- and software developed according to IEC 61508 for SIL2 (Min./Max./range) respectively SIL3 (homogeneous redundancy)
- Highest process safety due to Multi-Echo Tracking evaluation
- Safe measurement in bulk solids and in applications with strong dust formation
- Simple commissioning due to precalibrated sensor
- Heartbeat Technology for a cost-effective and safe plant operation during the entire life cycle

Ultrasonic – the Prosonic

The ultrasonic method is a proved, as well as cost-effective, solution for level measurement bulk solids. Instruments are available as compact or separate versions. This measuring principle is characterized by easy planning and assembly, fast and safe commissioning, a long service life and reduced maintenance costs. Typical applications include abrasive and aggressive media, even in rough environments.

The Prosonic portfolio for applications in bulk solids

1

Prosonic FMU30

Cost effective all-round instrument for level applications in bulk solids

- Temperature: -40 to +60°C (-40 to +140°F)
- Pressure: +0.7 to +3bar (+10 to +44psi)
- Measuring range: Sensor 1½" up to 2m (6.6ft), sensor 2" up to 3.5m (11ft)

2 3 4 5 6

Prosonic FMU40/41/42/43/44

Cost effective device for sophisticated level measurement in bulk solids

- Temperature: -40 to +80°C (-40 to +176°F)
- Pressure: +0.7 to +3bar (+10 to +44psi)
- Measuring range: up to 10m (33ft)

7 8 10 11 12

Prosonic FDU90/91/92/93/95

Ultrasonic sensor for level and flow measurement for connection to FMU9x

- Temperature: -40 to +105°C (-40 to +221°F)
- Pressure: +0.7 to +4bar (+10 to +58psi)
- Measuring range: up to 45m (148ft)

9

Prosonic FDU91F

Hygienic sensor for level measurement for connection to FMU9x

- Temperature: -40 to +105°C (-40 to +221°F), 30min., +135°C (+275°F)
- Pressure: +0.7 to +4bar (+10 to +58psi)
- Measuring range: up to 5m (16ft)

13 14

Prosonic FMU90/95

Transmitter in housing for field or top hat rail mounting for up to 10 sensors

- Calculations: Average, difference, sum
- Ambient temperature: -40 to +60°C (-40 to +140°F)
- Accuracy: ±2mm + 0.17% of the adjusted measuring range

Advantages at a glance

- Unaffected by product properties, e. g. density or moisture
- Easy and fast commissioning due to preset application parameters
- Calibration without filling or discharging

Electromechanical level measurement – the Silopilot

Old seafarers used a weight on a rope to test the depth to the bottom of the sea. In industrial level measurement, the basic idea of sounding is still utilized in the electromechanical level system. Where other measurement methods are limited, applications involving bulk solids predominantly use electromechanical level measurements.

The Silopilot portfolio for applications in bulk solids

1

Silopilot FMM20

Basic model for continuous level measurement in light bulk solids

- Temperature: -20 to +150°C (-4 to +302°F)
- Pressure: +0.8 to +1.1bar (+11.6 to +15.95psi)
- Measuring range: up to 32m (105ft)

2

Silopilot FMM50

For continuous level measurement even in high bulk solids silos or bins

- Temperature: -20 to +230°C (-4 to +446°F)
- Pressure: +0.8 to +3bar (+11.6 to +43.5psi)
- Measuring range: up to 70m (230ft)

Advantages at a glance

- Proved, reliable measurement up to 70m (230ft)
- Safe measurement in extremely dusty environments
- Robust system with high tensile force prevents breakdown due to an immersed weight
- Compact instrument with 4 to 20mA current output as well as additional freely programmable signal outputs (e. g. counting pulses, relays)

Radiometry – the GammapiLOT

Radiometric instrumentation is used where other measuring principles can not be used due to extreme process conditions or because of mechanical, geometric or construction conditions.

The Radiometry portfolio for applications in bulk solids

1

GammapiLOT FMG50

The compact two-wire compact transmitter for point level detection, continuous level, interface and density measurement

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

2

Gamma Modulator FHG65

Effective suppression of background and extraneous radiation at the GammapiLOT FMG60

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

3

Source container FQG60

Radiation source container with radiation source insert with manual switch-on and switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

4 5

Source container FQG61/62

Radiation source container with source holder for manual or pneumatic switch-on/switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

6

Source container FQG63

Lightweight radiation source container with flexible extension element

- Temperature: -52 to +200°C (-62 to +392°F) (ambient), up to +400°C (+752°F) (process)
- Pressure: No limitation (non-invasive, extraneous)

7

Source container FQG66

Radiation source container with sliding source support rod for manual or pneumatic on/off switching

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

Advantages at a glance

- Non-contact, external measurement for the highest degree of safety and reliability under the most extreme process conditions
- Functional safety up to SIL2/3 according to IEC 61508

Point level detection in liquids

Choose the measuring principle which fits best for your application.

Vibronic

A sensor in form of a tuning fork is excited at its resonant frequency. The drive works piezoelectrically. The oscillating frequency changes as the fork enters the medium. The change is analyzed and translated into a switching signal.

Advantages

- Unaffected by media
- Ready for use without calibration
- Self-monitoring
- Can be used in turbulent and effervesce liquids

Capacitance

A capacitance probe may be compared to an electric capacitor. As the tank is filled, the probe capacity increases. This change is electrically analyzed.

Advantages

- Tried and tested in operation, robust and safe
- Simple commissioning
- Versatile
- Reliable function independent of build-up

Conductive

The resistance between two measuring electrodes changes by the presence or absence of a medium. In single-rod probes, the electrically conductive tank wall serves as a counter electrode.

Advantages

- Multipoint detection with one process connection
- Simple instrumentation

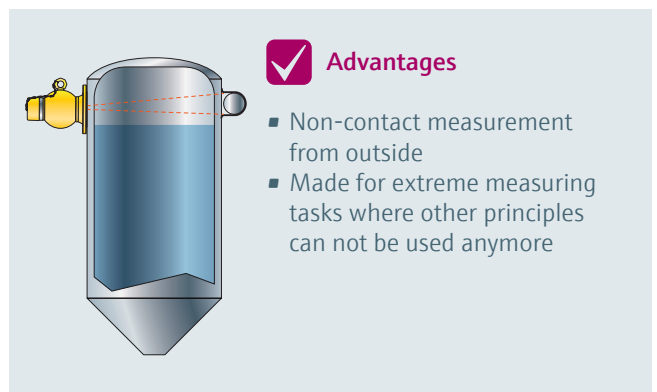

Float switch

As the switch floats up and down on the surface of a liquid, an installed sensor detects its position and triggers the switching operation.

Radiometry

The gamma source, a cesium or cobalt isotope, emits gamma radiation which is attenuated as it passes through materials. The measuring effect results from the absorption of radiation by the product to be measured which is caused by level changes. The measuring system consists of a source, source container and a detector as a receiver.

Vibronic – the Liquiphant

The instruments of the Liquiphant family reliably monitor the point level of all pumpable liquids in tanks and pipes. There are numerous applications from simple operational point level detection (minimum and maximum control), certified leakage monitoring and overfill prevention through to protective equipment in plant parts subject to Safety Integrity Levels (SIL2/3).

The Liquiphant portfolio for applications in liquids

1

Liquiphant FTL31

Point level switch in compact design with stainless steel housing

- Temperature: -40 to +150°C (-40 to +302°F)
- Pressure: -1 to +40bar (-14.5 to +580psi)
- Surface roughness: 3.2µm

2

Liquiphant FTL33

Point level switch in compact hygienic design with stainless steel housing for the food industry

- Temperature: -40 to +150°C (-40 to +302°F)
- Pressure: -1 to +40bar (-14.5 to +580psi)
- Surface roughness: 0.76µm or 1.5µm

3

Liquiphant FTL51B

Vibration point level switch for liquids in all industries

- Temperature: -50 to +150°C (-58 to +302°F)
- Pressure: -1 to +64bar (-14.5 to +928psi)

4

Liquiphant FTL51C

Point level switch for liquids with highly corrosion-resistant coating

- Temperature: -50 to +150°C (-58 to +302°F)
- Pressure: -1 to +40bar (-14.5 to +580psi)

5 6

Liquiphant FTL50H/51H

Vibration point level switch for liquids especially in the food and life sciences industry

- Temperature: -50 to +150°C (-58 to +302°F)
- Pressure: -1 to +64bar (-14.5 to +928psi)

7 8

Liquiphant FTL70/71

Point level switch for liquids in high-temperature applications

- Temperature: -60 to +280°C (-76 to +540°F), +300 °C (+572°F), 50h accumulated
- Pressure: -1 to +100bar (-14.5 to +1,450psi)

9 10 11

Liquiphant FTL80/81/85

Point level switch for liquids for FailSafe overfill prevention

- Temperature: -60 to +280°C (-76 to +540°F)
- Pressure: -1 to +100bar (-14.5 to +1,450psi)

Advantages at a glance

- Universal use – unaffected by medium properties such as conductivity, dielectric constant, viscosity, pressure and temperature
- Free of calibration and maintenance
- Functional safety SIL2/3
- Accurate switch-point
- Highest reliability due to self-monitoring

Capacitance – the Liquicap, the Liquipoint

Capacitance level measurement covers a wide range of applications. Simple and cost-effective probes offer many possibilities for point level detection in liquids. This measuring principle is particularly suited to applications involving aggressive media and heavy build-up.

The Liquicap and Liquipoint portfolio for applications in liquids

1

Liquicap FTI51

For liquids that are highly viscous and tend to form build-up

- Temperature: -80 to +200°C (-112 to +392°F)
- Pressure: Vacuum to +100bar (vacuum to +1,450psi)
- Sensor length: up to 6m (20ft)

2

Liquicap FTI52

For liquids that are highly viscous and tend to form build-up – for large measuring ranges

- Temperature: -80 to +200°C (-112 to +392°F)
- Pressure: Vacuum to +100bar (vacuum to +1,450psi)
- Sensor length: up to 12m (39ft)

3

Liquipoint FTW23

Compact probe for operation in water base media

- Temperature: -20 to +100°C (-4 to +212°F), CIP/SIP to +135°C (+275°F) for 1h
- Pressure: -1 to +16bar (-14.5 to +232psi)

Advantages at a glance

- Proved technology
- Universally adaptable probes
- Reliable performance also in viscous media or heavy build-up

Conductive – the Liquipoint

The conductive measuring principle offers the possibility for simple, safe detection of a point level in conductive liquids. The measuring principle performs well for a wide range of applications, from secure inventories (minimum quantity) and the avoidance of tank overflow through to two-point and multi-point control (pump control).

The Liquipoint portfolio for applications in liquids

1

2

3

1

Liquipoint FTW31

Rod probe for multi-point detection up to 5 switch points

- Temperature: -40 to +100°C (-40 to +212°F)
- Pressure: -1 to +10bar (-14.5 to +145psi)
- Sensor length: +0.1 to +4m (+3.9 to +157")

2

Liquipoint FTW32

Rope probe for multi-point detection up to 5 switch points

- Temperature: -40 to +70°C (-40 to +158°F)
- Pressure: -1 to +10bar (-14.5 to +145psi)
- Sensor length: +0.25 to +15m (+10 to +590")

3

Liquipoint FTW33

Very compact flush-mounted probe

- Temperature: -20 to +100°C (-4 to +212°F), CIP/SIP to +150°C (+302°F) for 1h
- Pressure: -1 to +25bar (-14.5 to +362.5psi)

Advantages at a glance

- Simple measuring principle
- Multi-point detection with one process connection

Float switch – der Liquifloat

This measuring principle is a simple and cost-effective procedure for point level detection in liquids. It is predominantly used as a level alarm in open basins, e. g. in sewerage treatment plants.

The Liquifloat for applications in liquids

1

Liquifloat FTS20

For point level detection in liquids

- Temperature: -20 to +85°C (-4 to +185°F)
- Pressure: up to +3bar (up to +43.5psi)

Advantages at a glance

- Simple measuring principle
- Also for Ex area applications

Radiometry – the Gammapilot

Radiometric instrumentation is used where other measuring principles can not be used due to extreme process conditions or because of mechanical, geometric or construction conditions.

The Radiometry portfolio for applications in liquids

1

Gammapilot FMG50

The compact two-wire compact transmitter for point level detection, continuous level, interface and density measurement

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

2

Gammapilot FTG20

Geiger-Mueller counter for point level detection with separate transmitter

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)
- Switch time: Up to 0.4 seconds

3

Gamma Modulator FHG65

Effective suppression of background and extraneous radiation at the Gammapilot FMG60

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

4

Source container FQG60

Radiation source container with radiation source insert with manual switch-on and switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

5 6

Source container FQG61/62

Radiation source container with source holder for manual or pneumatic switch-on/switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

7

Source container FQG63

Lightweight radiation source container with flexible extension element

- Temperature: -52 to +200°C (-62 to +392°F) (ambient), up to +400°C (+752°F) (process)
- Pressure: No limitation (non-invasive, extraneous)

8

Source container FQG66

Radiation source container with sliding source support rod for manual or pneumatic on/off switching

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

Advantages at a glance

- Four measuring tasks in one measuring principle
- Non-contact, external measurement for the highest degree of safety and reliability under the most extreme process conditions
- Functional safety up to SIL2/3 according to IEC 61508
- Overfill prevention WHG

Point level detection in bulk solids

Choose the measuring principle which fits best for your application.

Vibronic

A one-rod sensor or a tuning fork is excited at its resonant frequency. The drive works piezoelectrically. The amplitude changes as the fork enters the medium. The change is analyzed and translated into a switching signal.

Advantages

- Universal point level switch
- Largest variety of certificates, housings, electronic inserts, process connections and sensor geometries
- Easy installation
- No wear and tear / maintenance-free

Capacitance

A capacitance probe may be compared to an electric capacitor. As the tank is filled, the probe capacity increases. This change is electrically analyzed.

Advantages

- Tried and tested in operation, robust and safe
- Easy commissioning
- Versatile

Paddle

The rotation of the paddle is stopped as it is covered by solids. This actuates a relay.

Advantages

- Measuring principle for simple applications
- Calibration not required
- Rotation monitoring

Microwave barrier

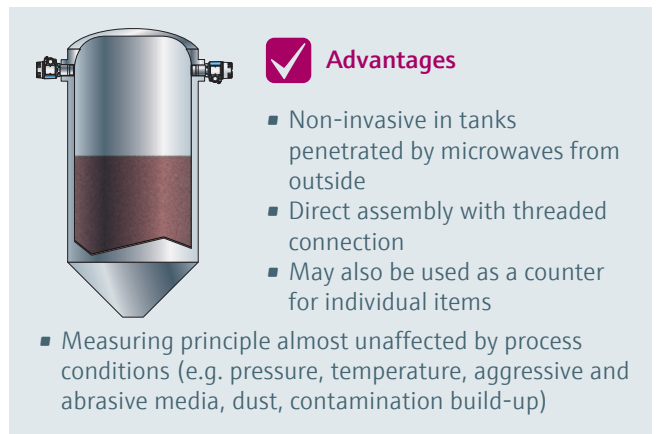

Microwave barrier:

Detection of all kinds of bulk solids is based on microwaves (transmitter-receiver principle).

Bulk solids movement sensor:

Detection of bulk solids movement (present / not present) is based on microwaves (Doppler effect).

Inspection glasses have to be installed in case of metallic container walls. Installation in contact with the process is also possible.

Radiometry

The gamma source, a cesium or cobalt isotope, emits gamma radiation which is attenuated as it passes through materials. The measuring effect results from the absorption of radiation by the product as the level changes. The measuring system consists of a source, source container and a detector as a receiver.

Vibronic – the Soliphant

The Soliphant offers robust point level switches for applications in powdery, fine-grained and lumpy bulk solids and solids with low density, e. g. caused by fluidizing. The different designs allow application diversity – Soliphant can even be used in hazardous areas. Typical examples are found in primaries (cement, plaster), the chemical industry (plastic granules, detergents), the food industry (flour, sugar) and animal feed production (wheat, corn).

The Soliphant portfolio for applications in bulk solids

1

Soliphant FTM20

Compact vibration point level switch for bulk solids

- Temperature: -40 to +150°C (-40 to +302°F)
- Pressure: -1 to +40bar (-14.5 to +580psi)
- Sensor length: up to 225mm (9")

2

Soliphant FTM21

Vibration point level switch for bulk solids

- Temperature: -40 to +150°C (-40 to +300°F)
- Pressure: -1 to +25bar (-14.5 to +360psi)
- Sensor length: 500mm (20"), 1,000mm (40"), 1,500mm (60")

3 4 5 6

Soliphant FTM50

Universal point level switch for fine-grained bulk solids also for explosion-hazardous areas

- Temperature: -50 to +280°C (-60 to +540°F)
- Pressure: -1 to +25bar (-14.5 to +360psi)
- Sensor length: 145mm (5.7"), 200mm (8")

7

Soliphant FTM51

Universal point level switch for fine-grained bulk solids also for explosion-hazardous areas

- Temperature: -50 to +280°C (-60 to +540°F)
- Pressure: Vacuum to 25bar (vacuum to 360psi)
- Sensor length: 300 to 4,000mm (12 to 155"), 6,000mm (230") on request

8

Soliphant FTM52

Universal point level switch for fine-grained bulk solids also for explosion-hazardous areas

- Temperature: -40 to +80°C (-40 to +170°F)
- Pressure: -1 to +2bar (-14.5 to +30psi), +6bar (+80psi) for EExd/EEExde
- Sensor length: 750 to 20,000mm (30 to 800")

Advantages at a glance

- Universal use – independent of the medium
- Easy, fast commissioning (no calibration required)
- Permanent self-monitoring
- Build-up and abrasion monitoring

Capacitance – the Nivector, the Minicap, the Solicap

Capacitance level measurement covers a wide range of applications which are not limited to process engineering. Simple and cost-effective probes offer many possibilities for point level detection in liquids and bulk solids. This measuring principle is particularly suited to applications involving aggressive media and heavy build-up.

The Nivector, Minicap and Solicap portfolio for applications in bulk solids

1

Nivector FTI26

For all types of powdered and fine-grained solids

- Temperature: -20 to +80°C (-4 to +176°F)
- Pressure: -1 to +6bar (-14.5 to +90psi)

2

Minicap FTC260

Point level switch for light bulk solids

- Temperature: -40 to +130°C (-40 to +266°F)
- Pressure: Vacuum to +25bar (vacuum to +360psi)
- Sensor length: 140mm (5.51")

3

Minicap FTC262

Designed for light bulk solids

- Temperature: -40 to +80°C (-40 to +176°F)
- Pressure: -1 to +6bar (-14.5 to +90psi)
- Sensor length: 500 to 6,000mm (20 to 236")

4

Solicap FTI55

For point level detection for fine-grained to coarse-grained bulk solids

- Temperature: -50 to +180°C (-58 to +356°F)
- Pressure: -1 to +25bar (-14.5 to +363psi)
- Measuring range: 200 to 4,000mm (4 to 157")

5

Solicap FTI56

Point level detection for fine-grained to coarse-grained bulk solids

- Temperature: -50 to +180°C (-58 to +356°F)
- Pressure: -1 to +25bar (-14.5 to +363psi)
- Measuring range: 500 to 22,000mm (20 to 866")

6

Solicap FTI77

Point level detection for bulk solids, especially for high temperatures and strong mechanical loads

- Temperature: -50 to +400°C (-58 to +752°F)
- Pressure: -1 to +10bar (-14.5 to +145psi)
- Measuring range: 200 to 20,000mm (20 to 787")

Advantages at a glance

- Proved technology
- Universally adaptable probes
- Reliable performance also in viscous media or heavy build-up

Paddle switch – the Soliswitch

The universally usable paddle point level switch is employed as a full, empty and requirement alarm in silos with bulk solids. It is ideal for flowing bulk solids up to a grain size of 50mm (2").

The Soliswitch portfolio for applications in bulk solids

1

2

3

1

Soliswitch FTE20

Simple mechanical mechanism, extremely robust and cost-effective point level switch for bulk solids

- Temperature: -20 to +80°C (-4 to +170°F)
- Pressure: +0.5 to +1.8bar (+7 to +25psi)
- Sensor length: Different standard lengths between 75mm (3") and 300mm (12"), rope length of 2,000mm (80") (can be shortened)

2

Soliswitch FTE30

Simple mechanical mechanism, extremely robust and cost-effective point level switch for bulk solids

- Temperature: -20 to +80°C (-4 to +170°F)
- Pressure: +0.5 to +1.8bar (+7 to +25psi)
- Sensor length: Different standard lengths between 100mm (4") and 800mm (32"), rope length of 2,000mm (80") (can be shortened)

3

Soliswitch FTE31

Simple mechanical mechanism, extremely robust and cost-effective point level switch for bulk solids

- Temperature: -20 bis +80°C (-4 to 170°F)
- Pressure: +0.5 to +1.8bar (+7 to +25psi)
- Sensor length: Different standard lengths between 100mm (4") and 600mm (24"), rope length of 2,000mm (80") (can be shortened)

Advantages at a glance

- Easy installation
- Recognition of failures without dismantling the instrument
- Robust plastic housing with transparent cover
- Cover securing device
- Density setting without any tools
- Automatic rotation monitoring (optional)

Microwave barrier – the Soliwave

In many cases where contact methods are limited, microwave barriers are the appropriate solution. They avoid jamming, indicate point levels, solve positioning and counting tasks, provide non-contact measurement and are thus, free of wear and tear. Typical products to be measured are wood chips, paper and carton chips, lime, pebbles, sand or even bags and complete boxes.

The Soliwave portfolio for applications in bulk solids

1

2

3

4

1

Soliwave FQR56

Emitter for non-contact point level detection in bulk solids

- Temperature: -40 to +70°C (-40 to +158°F)
- Measuring range: up to 100m (328ft)

2

Soliwave FDR56

Receiver for non-contact point level detection in bulk solids

- Temperature: -40 to +70°C (-40 to +158°F)
- Measuring range: up to 100m (328ft)

3

Soliwave FQR50

Emitter for non-contact point level detection in bulk solids

- Temperature: -40 to +70°C (-40 to +158°F)
- Measuring range: up to 20m (65ft)

4

Soliwave FDR50

Receiver for non-contact point level detection in bulk solids

- Temperature: -40 to +70°C (-40 to +158°F)
- Measuring range: up to 20m (65ft)

Advantages at a glance

- Adjustable sensitivity
- Non-contact measurement
- No wear and tear or maintenance with long service life
- Easy installation and commissioning
- Indication of the signal strength
- Automatical adjustment function
- On-site display and simulation

Radiometry – the Gammapilot

Radiometric instrumentation is used where other measuring principles can not be used due to extreme process conditions or because of mechanical, geometric or construction conditions.

The Radiometry portfolio for applications in bulk solids

1

Gammapilot FMG50

The compact two-wire compact transmitter for point level detection, continuous level, interface and density measurement

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

2

Gammapilot FTG20

Geiger-Mueller counter for point level detection with separate transmitter

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)
- Switch time: up to 0.4 seconds

3

Gamma Modulator FHG65

Effective suppression of background and extraneous radiation at the Gammapilot FMG60

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

4

Source container FQG60

Radiation source container with radiation source insert with manual switch-on and switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

5 6

Source container FQG61/62

Radiation source container with source holder for manual or pneumatic switch-on/switch-off

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

7

Source container FQG63

Lightweight radiation source container with flexible extension element

- Temperature: -52 to +200°C (-62 to +392°F) (ambient), up to +400°C (+752°F) (process)
- Pressure: No limitation (non-invasive, extraneous)

8

Source container FQG66

Radiation source container with sliding source support rod for manual or pneumatic on/off switching

- Temperature: No limitation (non-invasive, extraneous)
- Pressure: No limitation (non-invasive, extraneous)

Advantages at a glance

- Four measuring tasks in one measuring principle
- Non-contact, external measurement for the highest degree of safety and reliability under the most extreme process conditions
- Functional safety up to SIL2/3 according to IEC 61508
- Overfill prevention WHG

Density / Concentration

Vibronic – Liquiphant Density

Quality measurement in liquids

With an individual developed electronic, the process approved vibronic principle is usable for density measurement. Overdosing preliminary, interim and final products, determining the exact density or concentration, monitoring quality and controlling process – all these activities constitute a reason for the density measurement of the medium. Using the vibronic principle, we offer you the possibility of determining density and concentration in a simple and fast manner across industries.

Advantages at a glance

- Costly laboratory avoid
- Process monitoring and controlling in situ and online
- Complying with tolerances is to increase quality
- Industry independent
- Any unit you require (°Plato, °Brix, °Baumé,...)

Functional principle

A sensor in form of a tuning fork is excited on its resonance frequency. The drive works piezoelectrically. The oscillating frequency changes in liquids.

Different media has different density / concentration, therefore, we have different oscillating frequencies. Those signals will be evaluated and converted into quality information by Liquiphant Density.

Density measurement for quality monitoring and process control

Vibronic – Liquiphant

Coriolis – Promass

Radiometry – Gammapiilot

Interface measurement

Separate the best from the rest

Interface measurement for any application

Your application is of prime significance because the instrument serves the application and is only selected once the general setting is known. You get the optimum interface measurement solution in relation to your process requirements from us.

Precise interface measurement is important in continuous and dynamic processes. Is the overall level constant or

variable, and if so, in which range? Should the overall level be available as a measured value in addition to the interface measurement. Does emulsion occur during measurement? The answers to such questions have a strong influence on the correct selection of instrumentation. We offer you transparency in relation to options, application limits and commissioning of the individual measuring principles. Guided radar, multiparameter, capacitance instrumentation or radiometry – we support you in your application.

Functional principles

Guided radar

As the pulses impact the medium surface, only part of the sending pulse is reflected. Especially in media with a low dielectric constant (DC), the other part penetrates the medium. As the signal enters the lower medium with a higher dielectric constant it is reflected once more. Taking the delayed Time-of-Flight of the pulse through the upper medium into consideration the distance to the interface is determined in addition.

Multiparameter

The name of the innovation in interface measurement is FMP55 Multiparameter. This instrument combines the advantages of the capacitance and guided radar measuring principles. Emulsion layers may cause signal losses in interface detection in guided radar measurements. Only Levelflex FMP55 Multiparameter can guarantee safe measured values for both the interface and the overall level with this unique, redundant measuring system.

Capacitance

Media with a small dielectric constant (DC) cause very small changes of the capacitance value while media with a high DC produce respectively large capacitance changes in level measurement. In many interface applications, the medium with the smaller DC value is on top, e.g. in hydrocarbon on water. The upper medium merely provides a minimum contribution to the overall capacitance value – the issued level thus only refers to the water level (the interface).

Radiometry

The gamma source which is usually installed inside the tank emits gamma radiation which is attenuated as it penetrates the container wall and the medium. Outside of the container, a detector converts the radiation received into an electric signal. The measuring effect results from the fact that different interfaces absorb (attenuate) the radiation differently. If the transmitter has been calibrated to the media by wet calibration once, a correlation to the measurement of the interface results automatically.

The application determines the sensor

Measuring task	Measuring principle	Features / advantages	Application limits / conditions
 <ul style="list-style-type: none"> ■ Clear interface liquid / liquid 	Guided radar Levelflex FMP51/52/54 	<ul style="list-style-type: none"> ■ Simultaneous acquisition of interface layer and total level if clear interface ■ No wet calibration required ■ Not affected by the density of the medium ■ Applications up to +450°C / +400bar (+842°F / +5,800psi) ■ Probes can be shortened (rod/rope) 	<ul style="list-style-type: none"> ■ DC of the upper medium may be max. 10 ■ Difference of the DCs between the two media must be > 10 ■ Emulsion layer up to max. 50mm (2") allowable ■ For interface measurement, the thickness of the upper phase must be min. 80mm (3.15")

Smooth integration into your control system – thanks to digital communication

We offer all common electronic communication protocols. In addition to the classic analog electronics (output 4 to 20mA) digital electronic inserts are also available.

- FOUNDATION fieldbus offers easy testing of instruments, important additional information and diagnostic functionalities according to NAMUR NE107 as well as smooth system integration which increases the availability and safety of your plant.
- HART electronics (output 4 to 20mA with superimposed HART protocol) for additional functionalities and diagnostic functions.
- PROFIBUS PA electronics for the complete integration into digital industrial bus systems. Simplified instrument identification, brief uploading and downloading times during commissioning, diagnostic functionalities according to NAMUR NE107 and the smooth integration help to reduce costs and downtimes to a minimum.

All digital electronics may be smoothly integrated into different control systems and can be configured via a PC and the universal FieldCare/DeviceCare operating program as well as via all common PAM systems.

Integration of Endress+Hauser field devices into automation architectures

- Emerson
- Honeywell
- Invensys
- PACTware
- Siemens
- Yokogawa

The integration capability of the instruments is tested at our system laboratory thus ensuring their system independence. We also offer training opportunities directed especially to the integration of instruments into respective control systems.

Operating cost savings due to instrument diagnosis

Plant asset management is one of the most important trends in process industry. Thanks to digital communication protocols, all current Endress+Hauser instruments support the diagnostic categories according to NAMUR NE107. The pertaining classification of failures into four categories ensures that the right information is transmitted to the right persons at the right time. This avoids operating failures, improves the maintenance cycle and finally reduces costs.

Diagnostic categories

Symbol	Status Text	Explanation
	Failure	The output signal is invalid due to a functional failure in the field instrument or its periphery.
	Function control	Work is performed on the field instrument, the output signal is thus temporarily invalid (e.g. frozen).
	Maintenance requirement	The output signal is still valid but the wear and tear reserve will be depleted soon or a function will be limited shortly due to the conditions of use, e.g. ageing of the pH electrode.
	Non-conformance to specification	Deviations from the permitted ambient or process conditions determined by the instrument through self-monitoring or failures in the instrument itself show that the uncertainty of measurement in sensors or set point deviation in actuators probably exceeds what is expected under operational conditions.

The correct use of diagnostic information can save operating costs in specific applications. Our level instrumentation has been equipped with numerous items of such information which may be very easily managed via a plant asset management system.

- Build-up on the sensor is detected by the analysis of the “Relative Echo Amplitude” (predictive maintenance). Maintenance cycles can thus be planned in a significantly improved manner. In the same way, foam formation is detected in the process which, in turn, permits conclusions concerning the quality of the process or medium (process diagnosis).
- The supply voltage can be continually recorded and monitored during the verification of the field instrument installation. This, in turn, permits valuable conclusions concerning clamp corrosion and ensures the uninterrupted operation of the instrument (predictive maintenance).

Test Center

There are some things you can never get enough of – for example, safety

Our Test Center (internationally accredited test centre: FM, CSA) has three laboratories for device safety, application technology and electromagnetic compatibility. The various test units make it possible to ensure and improve the reliability and quality of our devices under realistic test conditions. In addition, the devices for new applications can be tested in advance during development.

In the various 'durability tests', devices are exposed to extreme conditions as can be expected in real applications. These include dust tests (explosion protection), abrasion

and friction tests, climate tests (heat and cold), mechanical load tests and spray water leak tests. A fully automated tank test plant with a capacity of 24,000 liter, is used to simulate the most difficult applications. The Test Center also has an accredited EMC laboratory.

Apart from carrying out tests on our devices during development, the Test Center also trains service staff and even customers. Customer specific application problems are analyzed, tests to simulate new applications are run and device approvals are carried out.

Inventory Management Solutions

Inventory management is much more than level measurement

Process automation enterprises reduce inventory costs and increase their productivity by comprehensive inventory display around the clock.

How much raw material is available on site? Is it sufficient to produce incoming orders or is reordering required? How much storage space is still available? These are typical questions when processing, transporting and storing products like chemicals, crude oil or petrol. Monitoring and controlling the flow of materials constitutes a genuine challenge for companies of the most varied industries. The key for efficient inventory management is a comprehensive and precise chain of information from the field right through to the management level. Being an expert in level measurement, we offer the right measuring principle for any application from our complete instrumentation range. However, in inventory management solutions we take another step ahead: Software and gateways generate real

information from data to facilitate decisions on basis of current values at any time and to optimize processes continually. The solutions are scalable in many ways: From mere monitoring of tanks and silos through to the highly accurate measurement of tank levels for custody transfer.

Custody transfer solutions for tank farms and terminals

Today, customers as well as the legislator place far-reaching requirements on the operator of a tank farm or terminal. The focus is on safety aspects, transparency of inventories and meeting custom-law regulations in custody transfer logistics. Our highly accurate tank gauging instruments of the latest generation, Proservo and Micropilot, meet these requirements. The exact measurement (with an accuracy up to $\pm 0.4\text{mm}$) and the compliance with functional safety (SIL2/3) are setting standards in the market today. In combination with temperature measuring chains and the Tankvision inventory software approved for custody

transfer, the solution offers the highest degree of precision and a certified mass or volume balance. In order to maintain flexibility for future technologies and to safeguard the control of a plant, a tank farm operator needs the ability of extension and migration at any time. The integration options of customary open but also proprietary fieldbus protocols are a unique selling proposition of Endress+Hauser. Modular skids for loading, automatic overspill protection systems as well as data interfaces and the software solutions for inventory management, Tankvision, Terminalvision as well as SupplyCare, complete the overall system for the safe, efficient and successful operation of a tank farm.

Inventory monitoring in producing enterprises

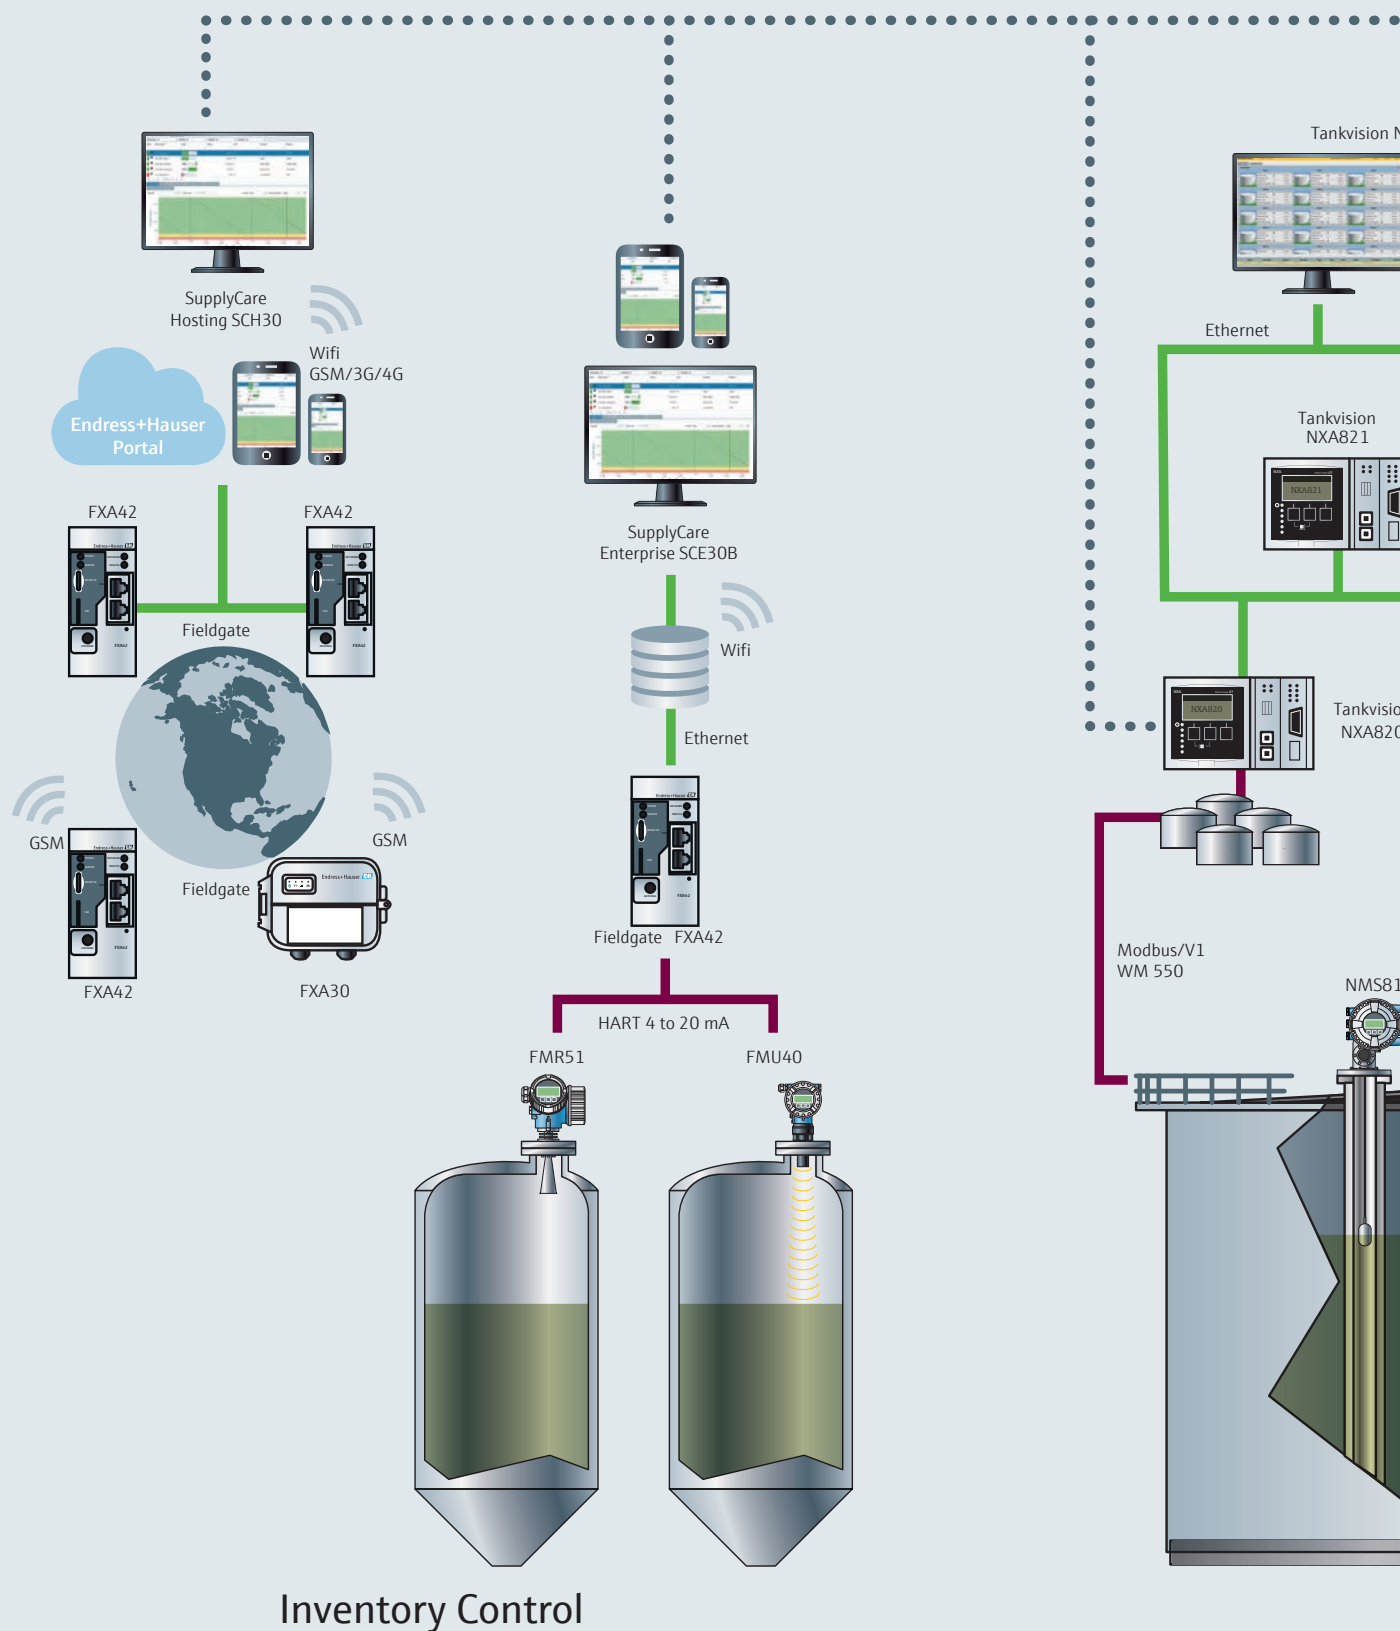

Wherever materials are produced or distributed, tanks or silos are involved. They store raw materials, semi-finished products or finished products to be sold. Inventories are continually acquired to ensure efficient production without any downtime. The modern inventory management solutions of Endress+Hauser aim at using the level data to increase efficiency. They consist of instruments, wireless, mobile radio or Ethernet gateways and the smart inventory management software called SupplyCare. It collects data automatically, makes it available in a consolidated form and visualizes it in a manner oriented to users or requirements. At the same time, it is completely modular and scalable according to applications.

SupplyCare links all production and storage sites and guarantees the comprehensive visibility of your entire inventory – around the clock and around the globe. The advantages are obvious: You optimize and reduce your inventories and tie down only as much capital as required and your material is available whenever you need it. All parties involved in the supply chain of your enterprise, from purchasing and production through to shipping, have access to the system at any time. Of course, also via mobile terminals. If a limit is surpassed or undercut, the system automatically informs the relevant persons. This function helps recognizing the optimum time for reordering. SupplyCare links the entire supply chain, from your supplier through to your customer. Our vendor managed inventory system triggers a purchase order at the supplier's premises automatically, as soon as your inventory is not sufficient anymore. At the same time, the system informs your customers on required shipments. You virtually supply automatically and just-in-time. Your customer does not have to tend to anything. From simple monitoring and visualizing of tanks and silos through to complex supply chain systems on a global level, the solutions guarantee complete transparency for your success.

Our inventory management solutions support you:

- Highest degree of transparency in recording product gains and losses by reconciling the inventory with additions and disposals in the plant.
- Increase in customer satisfaction by higher delivery reliability and the elimination of products out of stock and emergency shipments.
- Fast and efficient reaction to supply chain fluctuations due to company supply and value added chain optimization.
- Lower inventory management costs due to the integration of data in your system thus facilitating the fast and effective data exchange with your business partners and systems.
- Increase in productivity due to higher accuracy of your inventory monitoring and improved planning resources.

Tools for selection and operation

Endress+Hauser Applicator

Our Applicator software is a convenient selection and sizing tool for planning processes. Using the entered application parameters, e.g. from measuring point specifications, Applicator determines a selection of suitable products and solutions. Supplemented by sizing functions and a module for project administration Applicator will alleviate your daily engineering work.

www.endress.com/applicator

Endress+Hauser Operations App

The app offers fast access to up-to-date product information and device details e.g. order code, availability, spare parts, successor products for old devices and general product information - wherever you are, whenever you need it. Simply enter the serial number or scan the data matrix code on the device to download the information.

Endress+Hauser SmartBlue App

- Time saving mobile access to device, diagnostics and process information even in hazardous areas
- Secure data transmission for fast and reliable configuration and maintenance, reviewed by Fraunhofer Institute

Scan the QR-Code

Endress+Hauser DC App

The app offers comfortable access to several thousand DC values for all kinds of different media. You can search by the name of the medium or the chemical formula. The autocomplete functionality helps you if you don't know the exact spelling of the name of your medium.

Services - by your side

Committed to your business, for improved plant performance

Our commitment to you is to support, to service and to optimize your process. Whatever your location or your industry, our global service force of over 1000 experts is strategically located worldwide ensuring active local presence to help you reach your goals. Based on our process knowledge and technical expertise, a uniform approach through clear procedures ensures that the work we conduct for you is done properly. Customized responses can also be adapted to your needs, contact us today.

Supporting

Need quick response to support you in emergency situations? We are near you – ready and willing to provide you with the appropriate support

- Diagnostic and repair
- Support services

Servicing

Looking for expertise? We offer a variety of services to complement the capabilities of your staff throughout your plant lifecycle

- Calibration services
- Commissioning services
- Maintenance services
- Training and seminars
- Engineering services

Optimizing

Need help to reduce costs while maintaining compliance? We offer effective ways to optimize your processes, enabling you to increase productivity and reach your business goals

- Maintenance optimization

Eco-friendly produced and printed on paper from sustainable forestry.
