Services

Technical Information **Proline Prowirl O 200**

Vortex flowmeter

Flowmeter optimized to meet requirements of high-pressure mating pipes

Application

- Preferred measuring principle for wet/saturated/ superheated steam, gases & liquids (also cryogenic)
- The specialist for applications with high process pressure *Device properties*
- Saturated steam mass flow up to PN 250 (Class 1500)
- Full compliance with NACE (MR0175/MR0103)
- Flexible positioning of pressure cell
- Display module with data transfer function
- Robust dual-compartment housing
- Plant safety: worldwide approvals (SIL, Haz. area)

Your benefits

- Better process control integrated temperature and pressure measurement for steam and gases
- Increased mechanical integrity for flow measurement special sensor design
- Same accuracy down to Re 10000 most linear Vortex meter body
- Long-term stability robust drift-free capacitive sensor
- Convenient device wiring separate connection compartment
- Safe operation no need to open the device due to display with touch control, background lighting
- Integrated verification Heartbeat Technology

Function and system design

Measuring principle

Vortex meters work on the principle of the *Karman vortex street*. When fluid flows past a bluff body, vortices are alternately formed on both sides with opposite directions of rotation. These vortices each generate a local low pressure. The pressure fluctuations are recorded by the sensor and converted to electrical pulses. The vortices develop very regularly within the permitted application limits of the device. Therefore, the frequency of vortex shedding is proportional to the volume flow.

■ 1 Sample graphic

The calibration factor (K-factor) is used as the proportional constant:

K-Factor = -

Pulses Unit Volume [m³]

A0003939-EN

Within the application limits of the device, the K-factor only depends on the geometry of the device. It is for Re > 10000:

- Independent of the flow velocity and the fluid properties viscosity and density
- Independent of the type of substance under measurement: steam, gas or liquid

The primary measuring signal is linear to the flow. After production, the K-factor is determined in the factory by means of calibration. It is not subject to long-time drift or zero-point drift.

The device does not contain any moving parts and does not require any maintenance.

The capacitance sensor

The sensor of a vortex flowmeter has a major influence on the performance, robustness and reliability of the entire measuring system.

The robust DSC sensor is:

- burst-tested
- tested against vibrations
- tested against thermal shock (thermal shocks of 150 K/s)

The measuring device uses the tried-and-tested, capacitance measuring technology from Endress+Hauser, which is already in use in over 450 000 measuring points worldwide. Thanks to its design, the capacitance sensor is also particularly mechanically resistant to temperature shocks and pressure shocks in steam pipelines.

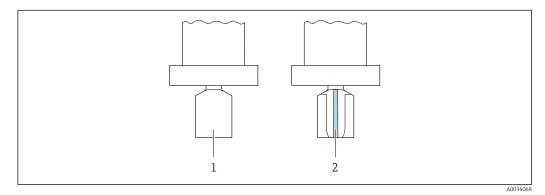

Temperature measurement

The "mass" option is available under the order code for "Sensor version". With this option the measuring device can also measure the temperature of the medium.

The temperature is measured via Pt 1000 temperature sensors. These are located in the paddle of the DSC sensor and are therefore in the direct vicinity of the fluid.

Order code for "Sensor version; DSC sensor; measuring tube":

- Option BD "Volume high-temperature; Alloy 718; 316L"
- Option CD "Mass; Alloy 718; 316L (integrated temperature measurement)"

- 1 Order code for "Sensor version", option Volume or Volume high-temperature
- 2 Order code for "Sensor version", option Mass

Pressure and temperature measurement

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible

The "mass steam" or "mass gas/liquid" options are available under the order code for "Sensor version; DSC sensor; measuring tube". With these options, the measuring device can also measure the pressure and temperature of the fluid.

The temperature is measured via Pt 1000 temperature sensors. These are located in the paddle of the DSC sensor and are therefore in the direct vicinity of the fluid. Pressure measurement is located directly on the meter body at the level of the bluff body. The position of the pressure tapping was chosen so that pressure and temperature could be measured at the same point. This enables accurate density and/or energy compensation of the fluid using pressure and temperature. The measured pressure tends to be somewhat lower than the line pressure. For this reason, Endress+Hauser offers a correction to the line pressure (integrated in the device).

Order code for "Sensor version; DSC sensor; measuring tube":

- Option DC "Mass steam; Alloy 718; 316L (integrated pressure/temperature measurement)"
- Option DD "Mass gas/liquid; Alloy 718; 316L (integrated pressure/temperature measurement)"

Lifelong calibration

Experience has shown that recalibrated measuring devices demonstrate a very high degree of stability compared to their original calibration: The recalibration values were all within the original measuring accuracy specifications of the devices. This applies to the measured volume flow, the device's primary measured variable.

Various tests and simulation have shown that once the radii of the edges on the bluff body are less than 1 mm (0.04 in), the resulting effect does not have a negative impact on accuracy.

If the radii of the edges on the bluff body do not exceed 1 mm (0.04 in), the following general statements apply (in the case of non-abrasive and non-corrosive media, such as in most water and steam applications):

- The measuring device does not display an offset in the calibration and the accuracy is still guaranteed.
- All the edges on the bluff body have a radius that is typically smaller in size. As the measuring
 devices are naturally also calibrated with these radii, the measuring device remains within the
 specified accuracy rating provided that the additional radius that is produced as a result of wear
 and tear does not exceed 1 mm (0.04 in).

Consequently, it can be said that the product line offers lifelong calibration if the measuring device is used in non-abrasive and non-corrosive media.

Air and industrial gases

The measuring device enables users to calculate the density and energy of air and industrial gases. The calculations are based on time-tested standard calculation methods. It is possible to automatically compensate for the effect of pressure and temperature via an external or constant value.

This makes it possible to output the energy flow, standard volume flow and mass flow of the following gases:

- Single gas
- Gas mixture
- Air
- User-specific gas

For detailed information on the parameters, see the Operating Instructions.→ 🗎 89

Natural gas

The device enables users to calculate the chemical properties (gross calorific value, net calorific value) of natural gases. The calculations are based on time-tested standard calculation methods. It is possible to automatically compensate for the effect of pressure and temperature via an external or constant value.

This makes it possible to output the energy flow, standard volume flow and mass flow in accordance with the following standard methods:

Energy can be calculated based on the following standards:

- AGA5
- ISO 6976
- GPA 2172

Density can be calculated based on the following standards:

- ISO 12213-2 (AGA8-DC92)
- ISO 12213-3
- AGA NX19
- AGA8 Gross 1
- SGERG 88

For detailed information on the parameters, see the Operating Instructions. $\rightarrow \cong 89$

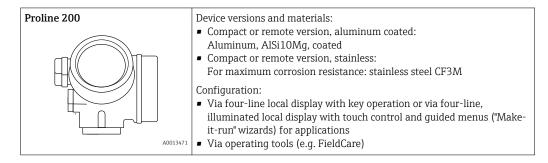

Measuring system

The device consists of a transmitter and a sensor.

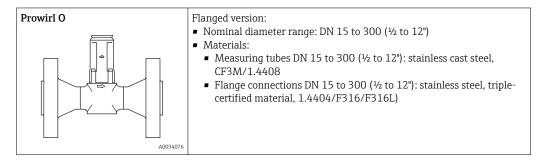

Two device versions are available:

- Compact version transmitter and sensor form a mechanical unit.
- Remote version transmitter and sensor are mounted in separate locations.

Transmitter

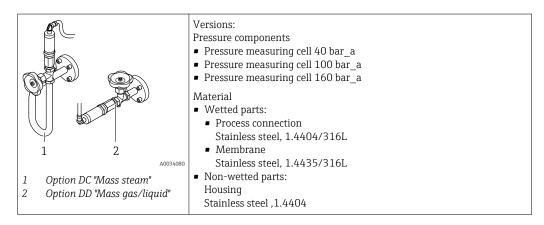

Sensor

Pressure measuring cell

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

Measuring range

The measuring range is dependent on the nominal diameter, the fluid and environmental influences.

The following specified values are the largest possible flow measuring ranges (Q_{min} to Q_{max}) for each nominal diameter. Depending on the fluid properties and environmental influences, the measuring range may be subject to additional restrictions. Additional restrictions apply to both the lower range value and the upper range value.

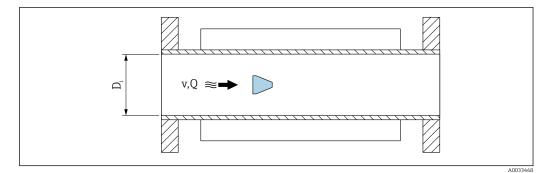

Flow	measuring	ranaes	in SI	units
1 10 11	measuring	runges	ur or	unus

DN [mm]	Liquids [m ³ /h]	Gas/steam [m³/h]
15	0.1 to 4.9	0.52 to 25
25	0.32 to 15	1.6 to 130
40	0.63 to 30	3.1 to 250
50	0.99 to 47	4.9 to 620
80	2.4 to 110	12 to 1500
100	4.1 to 190	20 to 2 600
150	9.3 to 440	47 to 5 900
200	18 to 760	90 to 10 000
250	28 to 1200	140 to 16 000
300	40 to 1700	200 to 22 000

Flow measuring ranges in US units

DN	Liquids	Gas/steam
[in]	[ft ³ /min]	[ft³/min]
1/2	0.061 to 2.9	0.31 to 15
1	0.19 to 8.8	0.93 to 74
11/2	0.37 to 17	1.8 to 150
2	0.58 to 28	2.9 to 370
3	1.4 to 67	7 to 900
4	2.4 to 110	12 to 1 500
6	5.5 to 260	27 to 3 500
8	11 to 450	53 to 6 000
10	17 to 700	84 to 9300
12	24 to 1000	120 to 13 000

Flow velocity

- D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)
- v Velocity in measuring tube
- Q Flow

The internal diameter of measuring tube D_i is denoted in the dimensions as dimension $K \rightarrow \cong 54$.

Calculation of flow velocity:

$$v [m/s] = \frac{4 \cdot Q [m^3/h]}{\pi \cdot D_i [m]^2} \cdot \frac{1}{3600 [s/h]}$$
$$v [ft/s] = \frac{4 \cdot Q [ft^3/min]}{\pi \cdot D_i [ft]^2} \cdot \frac{1}{60 [s/min]}$$

Lower range value

A restriction applies to the lower range value due to the turbulent flow profile, which only occurs with Reynolds numbers greater than 5000. The Reynolds number is dimensionless and indicates the ratio of the inertia force of a fluid to its viscous force when flowing and is used as a characteristic variable for pipe flows. In the case of pipe flows with Reynolds numbers less than 5000, periodic vortices are no longer generated and flow rate measurement is no longer possible.

The Reynolds number is calculated as follows:

$$Re = \frac{4 \cdot Q \ [m^3/s] \cdot \rho \ [kg/m^3]}{\pi \cdot D_i \ [m] \cdot \mu \ [Pa \cdot s]}$$
$$Re = \frac{4 \cdot Q \ [ft^3/s] \cdot \rho \ [lbm/ft^3]}{\pi \cdot D_i \ [ft] \cdot \mu \ [lbf \cdot s/ft^2]}$$

- Re Reynolds number
- Q Flow
- D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)
- μ Dynamic viscosity
- ρ Density

The Reynolds number, 5000 together with the density and viscosity of the fluid and the nominal diameter, is used to calculate the corresponding flow rate.

$$\begin{aligned} Q_{\text{Re}=5000} \left[\text{m}^{3}/\text{h} \right] &= \frac{5000 \cdot \pi \cdot \text{D}_{i} \left[\text{m} \right] \cdot \mu \left[\text{Pa} \cdot \text{s} \right]}{4 \cdot \rho \left[\text{kg/m}^{3} \right]} \cdot 3600 \left[\text{s/h} \right] \\ Q_{\text{Re}=5000} \left[\text{ft}^{3}/\text{h} \right] &= \frac{5000 \cdot \pi \cdot \text{D}_{i} \left[\text{ft} \right] \cdot \mu \left[\text{lbf} \cdot \text{s/ft}^{2} \right]}{4 \cdot \rho \left[\text{lbm/ft}^{3} \right]} \cdot 60 \left[\text{s/min} \right] \end{aligned}$$

- $Q_{Re=5000}$ Flow rate is dependent on the Reynolds number
- D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)
- μ Dynamic viscosity
- ρ Density

The measuring signal must have a certain minimum signal amplitude so that the signals can be evaluated without any errors. Using the nominal diameter, the corresponding flow can also be derived from this amplitude. The minimum signal amplitude depends on the setting for the sensitivity of the DSC sensor (s), the steam quality (x) and the force of the vibrations present (a). The value mf corresponds to the lowest measurable flow velocity without vibration (no wet steam) at a density of 1 kg/m^3 (0.0624 lbm/ft^3). The value mf can be set in the range from 6 to 20 m/s (1.8 to 6 ft/s) (factory setting 12 m/s (3.7 ft/s)) with the **Sensitivity** parameter (value range 1 to 9, factory setting 5).

$$v_{AmpMin} [m/s] = \max \begin{cases} \frac{mf [m/s]}{x^2} \bullet \sqrt{\frac{1 [kg/m^3]}{\rho [kg/m^3]}} \\ v_{AmpMin} [ft/s] = \max \begin{cases} \frac{mf [ft/s]}{x^2} \bullet \sqrt{\frac{0.062 [lb/ft^3]}{\rho [lb/ft^3]}} \end{cases}$$

*v*_{AmpMin} Minimum measurable flow velocity based on signal amplitude

- mf Sensitivity
- x Steam quality
- ρ Density

$$Q_{AmpMin} [m^{3}/h] = \frac{v_{AmpMin} [m/s] \cdot \pi \cdot D_{i} [m]^{2}}{4 \cdot \sqrt{\frac{\rho [kg/m^{3}]}{1 [kg/m^{3}]}}} \cdot 3600 [s/h]$$

$$Q_{AmpMin} [ft^{3}/min] = \frac{v_{AmpMin} [ft/s] \cdot \pi \cdot D_{i} [ft]^{2}}{4 \cdot \sqrt{\frac{\rho [lbm/ft^{3}]}{0.0624 [lbm/ft^{3}]}}} \cdot 60 [s/min]$$
A003490

 Q_{AmpMin} Minimum measurable flow rate based on signal amplitude

 $v_{AmpMin} ~~ Minimum~measurable~flow~velocity~based~on~signal~amplitude$

- D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)
- ρ Density

A0034302

$Q_{Low} [m^{3}/h] = max \begin{cases} Q_{min} [m^{3}/h] \\ Q_{Re-5000} [m^{3}/h] \\ Q_{AmpMin} [m^{3}/h] \end{cases}$
$Q_{Low} [ft^3/min] = max \begin{cases} Q_{min} [ft^3/min] \\ Q_{Re=5000} [ft^3/min] \\ Q_{AmpMin} [ft^3/min] \end{cases}$

The effective lower range value Q_{Low} is determined using the largest of the three values $Q_{min},\,Q_{Re\,=\,5000}$ and $Q_{AmpMin}.$

Q_{Low}	Effective lower range value
Q _{min}	Minimum measurable flow rate
Q _{Re = 5000}	Flow rate is dependent on the Reynolds number
<i>Q_{AmpMin}</i>	Minimum measurable flow rate based on signal amplitude

The Applicator is available for calculation purposes.

Upper range value

9

The measuring signal amplitude must be below a certain limit value to ensure that the signals can be evaluated without error. This results in a maximum permitted flow rate Q_{AmpMax} :

$$Q_{AmpMax} [m^{3}/h] = \frac{350 [m/s] \cdot \pi \cdot D_{i} [m]^{2}}{4 \cdot \sqrt{\frac{\rho [kg/m^{3}]}{1 [kg/m^{3}]}}} \cdot 3600 [s/h]$$
$$Q_{AmpMax} [ft^{3}/min] = \frac{1148 [ft/s] \cdot \pi \cdot D_{i} [ft]^{2}}{4 \cdot \sqrt{\frac{\rho [lbm/ft^{3}]}{0.0624 [lbm/ft^{3}]}}} \cdot 60 [s/min]$$

 $Q_{AmpMax} \quad Maximum\ measurable\ flow\ rate\ based\ on\ signal\ amplitude$

 D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)

ρ Density

For gas applications, an additional restriction applies to the upper range value with regard to the Mach number in the measuring device, which must be less than 0.3. The Mach number Ma describes the ratio of the flow velocity v to the sound velocity c in the fluid.

$$Ma = \frac{v [m/s]}{c [m/s]}$$
$$Ma = \frac{v [ft/s]}{c [ft/s]}$$

- Ma Mach number
- v Flow velocity
- c Sound velocity

The corresponding flow rate can be derived using the nominal diameter.

$$Q_{Ma=0.3} [m^{3}/h] = \frac{0.3 \cdot c [m/s] \cdot \pi \cdot D_{i} [m]^{2}}{4} \cdot 3600 [s/h]$$
$$Q_{Ma=0.3} [ft^{3}/min] = \frac{0.3 \cdot c [ft/s] \cdot \pi \cdot D_{i} [ft]^{2}}{4} \cdot 60 [s/min]$$

 $Q_{Ma=0.3}$ Restricted upper range value is dependent on Mach number

- c Sound velocity
- D_i Internal diameter of measuring tube (corresponds to dimension $K \rightarrow \square 54$)
- ρ Density

The effective upper range value Q_{High} is determined using the smallest of the three values Q_{max} , Q_{AmpMax} and $Q_{Ma=0.3}.$

$Q_{High} [m^{3}/h] = min \begin{cases} Q_{max} [m^{3}/h] \\ Q_{AmpMax} [m^{3}/h] \\ Q_{Ma=0.3} [m^{3}/h] \end{cases}$	
$Q_{High} [ft^{3}/min] = min \begin{cases} Q_{max} [ft^{3}/min] \\ Q_{AmpMax} [ft^{3}/min] \\ Q_{Ma=0.3} [ft^{3}/min] \end{cases}$

Current input

- $Q_{AmpMax} \quad Maximum\ measurable\ flow\ rate\ based\ on\ signal\ amplitude$
- $Q_{Ma=0.3}$ Restricted upper range value is dependent on Mach number

For liquids, the occurrence of cavitation may also restrict the upper range value.

The Applicator is available for calculation purposes.

Operable flow range	The value, which is typically up to 49: 1, may vary depending on the operating conditions (ratio
	between upper range value and lower range value)

Input signal

Current input	4-20 mA (passive)
Resolution	1 μΑ
Voltage drop	Typically: 2.2 to 3 V for 3.6 to 22 mA

A0034337

Maximum voltage	≤ 35 V
Possible input variables	PressureTemperatureDensity

External measured values

To increase the accuracy of certain measured variables or to calculate the corrected volume flow, the automation system can continuously write different measured values to the measuring device:

- Operating pressure to increase accuracy (Endress+Hauser recommends the use of a pressure measuring device for absolute pressure, e.g. Cerabar M or Cerabar S)
- Medium temperature to increase accuracy (e.g. iTEMP)
- Reference density for calculating the corrected volume flow
 - Various pressure measuring devices can be ordered as accessories from Endress+Hauser.

If the measuring device does not have pressure or temperature compensation ¹⁾, it is recommended that external pressure measurement values be read in so that the following measured variables can be calculated:

- Energy flow
- Mass flow
- Corrected volume flow

Integrated pressure and temperature measurement

The measuring device can also directly record external variables for density and energy compensation.

This product version offers the following benefits:

- Measurement of pressure, temperature and flow in a true 2-wire version
- Recording of pressure and temperature at the same point, thus ensuring maximum accuracy of density and energy compensation.
- Continuous monitoring of pressure and temperature, thus enabling complete integration in Heartbeat.
- Easy testing of pressure measurement accuracy:
 - Application of pressure by pressure calibration unit, followed by input into measuring device
 - Automatic error correction performed by device in the event of a deviation
- Availability of calculated line pressure.

Current input

The measured values are written from the automation system to the measuring device via the current input $\rightarrow \square$ 13.

HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:

- HART protocol
- Burst mode

Digital communication

The measured values can be written from the automation system to the measuring via:

- FOUNDATION Fieldbus
- PROFIBUS PA

1) Output 1 must always be used; output 2 is optional.

2) The integrated overvoltage protection is not used with option D: Terminals 5 and 6 (current input) are not protected against overvoltage.

- 3) FOUNDATION Fieldbus with integrated reverse polarity protection.
- 4) PROFIBUS PA with integrated reverse polarity protection.

Connecting cable for remote version

Transmitter and sensor connection housing

In the case of the remote version, the sensor and transmitter are mounted separately from on another and connected by a connecting cable. Connection is performed via the sensor connection housing and the transmitter housing.

How the connecting cable is connected in the transmitter housing depends on the measuring device approval and the version of the connecting cable used.

In the following versions, only terminals can be used for connection in the transmitter housing:

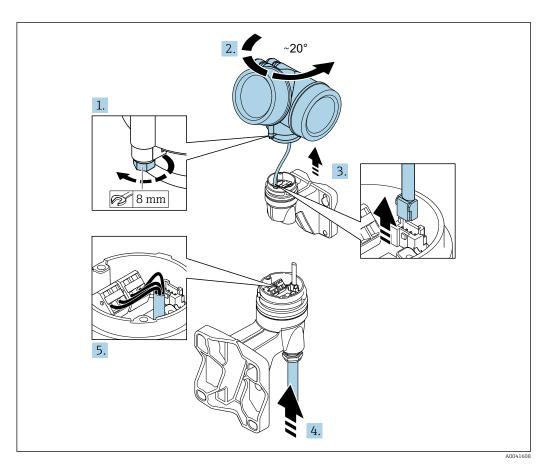

- Order code for "Electrical connection", option B, C, D
- Certain approvals: Ex nA, Ex ec, Ex tb and Division 1
- Use of reinforced connecting cable
- Order code for "Sensor version; DSC sensor; measuring tube", option DC, DD

In the following versions, an M12 device connector is used for connection in the transmitter housing:

- All other approvals
- Use of connecting cable (standard)

Terminals are always used to connect the connecting cable in the sensor connection housing (tightening torques for screws for cable strain relief: 1.2 to 1.7 Nm).

Connection via terminals

- 1. Loosen the securing clamp of the transmitter housing.
- 2. Turn the transmitter housing clockwise by approx. 20°.

3. NOTICE

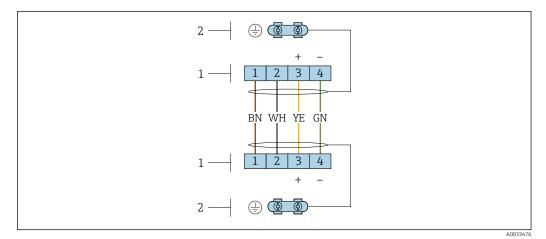

The connection board of the wall housing is connected to the electronics board of the transmitter via a signal cable!

> Pay attention to the signal cable when lifting the transmitter housing!

Lift the transmitter housing, plug the signal cable out of the connection board of the wall holder and remove the transmitter housing.

- 4. Release the cable gland and insert the connecting cable (use the shorter stripped end of the connecting cable).
- **5.** Wire the connecting cable $\rightarrow \square 2$, $\square 28 \rightarrow \square 3$, $\square 28$.
- 6. Reverse the removal procedure to reassemble the transmitter housing.
- 7. Firmly tighten the cable gland.

Connecting cable (standard, reinforced)

- PNO Directive 2.092 "PROFIBUS PA User and Installation Guideline"
- IEC 61158-2 (MBP)

Connecting cable for remote version

Connecting cable (standard)

Standard cable	$2\times2\times0.5~mm^2$ (22 AWG) PVC cable with common shield (2 pairs, pair-stranded) $^{1)}$			
Flame resistance	According to DIN EN 60332-1-2			
Oil-resistance	According to DIN EN 60811-2-1			
Shielding	Galvanized copper-braid, opt. density approx.85 %			
Cable length 5 m (16 ft), 10 m (32 ft), 20 m (65 ft), 30 m (98 ft)				
Operating temperature	When mounted in a fixed position: –50 to +105 $^\circ C$ (–58 to +221 $^\circ F); when cable can move freely: –25 to +105 ^\circ C (–13 to +221 ^\circ F)$			

 UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

Connecting cable (reinforced)

Cable, reinforced	$2\times2\times0.34~mm^2$ (22 AWG) PVC cable with common shield (2 pairs, pair-stranded) and additional steel-wire braided sheath $^{1)}$
Flame resistance	According to DIN EN 60332-1-2
Oil-resistance	According to DIN EN 60811-2-1
Shielding	Galvanized copper-braid, opt. density approx. 85%
Strain relief and reinforcement Steel-wire braid, galvanized	
Cable length	5 m (16 ft), 10 m (32 ft), 20 m (65 ft), 30 m (98 ft)
Operating temperature	When mounted in a fixed position: –50 to +105 $^\circ$ C (–58 to +221 $^\circ$ F); when cable can move freely: –25 to +105 $^\circ$ C (–13 to +221 $^\circ$ F)

 UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

Connecting cable (option "mass pressure-/temperature-compensated")

Order code for "Sensor version; DSC sensor; measuring tube", option DC, DD

Standard cable	$[(3\times2)$ + 1] \times 0.34 mm² (22 AWG)PVC cable with common shield (3 pairs, pair-stranded) $^{1)}$	
Flame resistance According to DIN EN 60332-1-2		
Oil-resistance	According to DIN EN 60811-2-1	
Shielding	Galvanized copper-braid, opt. density approx. 85%	
Cable length	10 m (32 ft), 30 m (98 ft)	
Operating temperature	When mounted in a fixed position: –50 to +105 $^\circ$ C (–58 to +221 $^\circ$ F); when cable can move freely: –25 to +105 $^\circ$ C (–13 to +221 $^\circ$ F)	

1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

Connecting cable (option "mass pressure-/temperature-compensated")

Order code for "Sensor version; DSC sensor; measuring tube", option DC, DD

Standard cable	$[(3\times2)+1]\times0.34~mm^2$ (22 AWG)PVC cable with common shield (3 pairs, pair-stranded) $^{1)}$	
Flame resistance	According to DIN EN 60332-1-2	
Oil-resistance	According to DIN EN 60811-2-1	
Shielding	Galvanized copper-braid, opt. density approx. 85%	
Cable length	10 m (32 ft), 30 m (98 ft)	
Operating temperature	When mounted in a fixed position: –50 to +105 $^\circ C$ (–58 to +221 $^\circ F); when cable can move freely: –25 to +105 ^\circ C (–13 to +221 ^\circ F)$	

1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

Overvoltage protection

The device can be ordered with integrated overvoltage protection for diverse approvals: *Order code for "Accessory mounted", option NA "Overvoltage protection"*

Input voltage range	Values correspond to supply voltage specifications $\rightarrow \square 29^{1)}$
Resistance per channel	$2 \cdot 0.5 \Omega$ max.
DC sparkover voltage	400 to 700 V
Trip surge voltage	< 800 V
Capacitance at 1 MHz	< 1.5 pF
Nominal discharge current (8/20 μs)	10 kA
Temperature range	-40 to +85 °C (-40 to +185 °F)

1) The voltage is reduced by the amount of the internal resistance $I_{min} \cdot R_i$

Depending on the temperature class, restrictions apply to the ambient temperature for device versions with overvoltage protection .

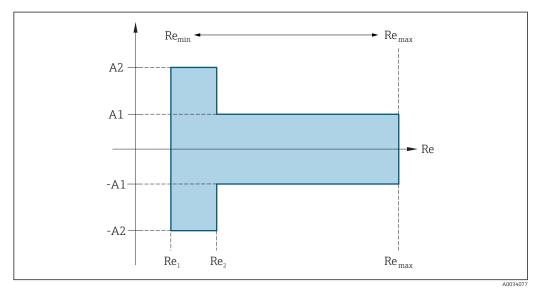

For detailed information on the temperature tables, see the "Safety Instructions" (XA) for the device.

Performance characteristics

Reference operating conditions	 Error limits following ISO/DIN 11631 +20 to +30 °C (+68 to +86 °F) 2 to 4 bar (29 to 58 psi) Calibration system traceable to national standards Calibration with the process connection corresponding to the particular standard

Reynolds	s number
Re ₁	5 000
Re ₂	10 000
Re _{min}	Reynolds number for minimum permitted volume flow in measuring tube
	Standard
	$Q_{AmpMin} [m^{3}/h] = \frac{v_{AmpMin} [m/s] \cdot \pi \cdot D_{i} [m]^{2}}{4 \cdot \sqrt{\frac{\rho [kg/m^{3}]}{1 [kg/m^{3}]}}} \cdot 3600 [s/h]$
	$Q_{AmpMin} [ft^{3}/min] = \frac{v_{AmpMin} [ft/s] \cdot \pi \cdot D_{i} [ft]^{2}}{4 \cdot \sqrt{\frac{\rho [lbm/ft^{3}]}{0.0624 [lbm/ft^{3}]}}} \cdot 60 [s/min]$
Re _{max}	Defined by internal diameter of measuring tube, Mach number and maximum permitted velocity in measuring tube
	$Re_{max} = \frac{\rho \cdot 4 \cdot Q_{Heigh}}{\mu \cdot \cdot K}$
	A0034339
	Further information on effective upper range value $Q_{High} \rightarrow B 12$

Volume flow

Medium type		Incompressible	Compressible
Reynolds number Measured value deviation range		Standard	Standard
Re ₂ to Re _{max}	A1	< 0.75 %	< 1.0 %
Re1 to Re2	A2	< 5.0 %	< 5.0 %

Temperature

- Saturated steam and liquids at room temperature, if T > 100 °C (212 °F):
- < 1 °C (1.8 °F)
- Gas: < 1 % o.r. [K]
- Volume flow: 70 m/s (230 ft/s): 2 % o.r.
- Rise time 50 % (stirred under water, following IEC 60751): 8 s

Pressure

Order code for "Pressure component" ¹⁾	Nominal value [bar abs.]	Pressure ranges and measured errors ²⁾		
		Pressure range [bar abs.]	Maximum measured error	
Option E Pressure measuring cell 40 bar_a	40	$\begin{array}{l} 0.01 \leq p \leq 8 \\ 8 \leq p \leq 40 \end{array}$	0.5 % of 8 bar abs. 0.5 % o.r.	
Option F Pressure measuring cell 100 bar_a	100	$0.01 \le p \le 20$ $20 \le p \le 100$	0.5 % of 20 bar abs. 0.5 % o.r.	
Option G Pressure measuring cell 160 bar_a	160	$0.01 \le p \le 40$ $40 \le p \le 160$	0.5 % of 40 bar abs. 0.5 % o.r.	

1) The "mass" sensor version (integrated pressure/temperature measurement) is available only for measuring devices in HART communication mode.

2) The specific measured errors refer to the position of the measurement in the measuring tube and do not correspond to the pressure in the pipe connection line upstream or downstream from the measuring device. No measured error is specified for the measured error for the "pressure" measured variable that can be assigned to the outputs.

Mass flow saturated steam

Sensor version			Mass (integrated temperature measurement)	Mass (integrated pressure/ temperature measurement) ¹⁾	
Process pressure [bar abs.]	Flow velocity [m/s (ft/s)]	Reynolds number range	Measured value deviation	Standard	Standard
> 4.76	20 to 50 (66 to 164)	Re_2 to Re_{\max}	A1	< 1.7 %	< 1.5 %
> 3.62 10 to 70 (33 to 230) Re ₂ to Re _{max} A1				< 2.0 %	< 1.8 %
In all cases not specified here, the following applies: < 5.7 %					

1) Sensor version available only for measuring devices in HART communication mode.

*Mass flow of superheated steam/gases*²⁾

Sensor version				Mass (integrated pressure/ temperature measurement) ¹⁾	Mass (integrated temperature measurement) + external pressure compensation ²⁾
Process pressure [bar abs.]				Standard	Standard
< 40	All velocities	Re_2 to Re_{max}	A1	< 1.5 %	< 1.7 %
< 120		Re_2 to Re_{max}	A1	< 2.4 %	< 2.6 %
In all cases not specified here, the following applies: < 6.6 %					

1) Sensor version available only for measuring devices in HART communication mode.

2) The use of a Cerabar S is required for the measured errors listed in the following section. The measured error used to calculate the error in the measured pressure is 0.15 %.

Water mass flow

Sensor version				Mass (integrated temperature measurement)
Process pressure [bar abs.]Flow velocity [m/s (ft/s)]Reynolds number rangeMeasured value deviation		Standard		
All pressures	All velocities	Re ₂ to Re _{max}	A1	< 0.85 %
		Re ₁ to Re ₂	A2	< 2.7 %

Mass flow (user-specific liquids)

To specify the system accuracy, Endress+Hauser requires information about the type of liquid and its operating temperature or information in table form about the dependency between the liquid density and the temperature.

Example

- Acetone is to be measured at fluid temperatures from +70 to +90 °C (+158 to +194 °F).
- For this purpose, the Reference temperature parameter (7703) (here 80 °C (176 °F)), Reference density parameter (7700) (here 720.00 kg/m³) and Linear expansion coefficient parameter (7621) (here 18.0298 × 10⁻⁴ 1/°C) must be entered in the transmitter.
- The overall system uncertainty, which is less than 0.9 % for the example above, is comprised of the following measurement uncertainties: uncertainty of volume flow measurement, uncertainty of temperature measurement, uncertainty of the density-temperature correlation used (including the resulting uncertainty of density).

Mass flow (other media)

Depends on the selected fluid and the pressure value, which is specified in the parameters. Individual error analysis must be performed.

Diameter mismatch correction

The measuring device can correct shifts in the calibration factor which are caused, for example, by a diameter mismatch between the device flange (e.g. ASME B16.5/Sch. 80, DN 50 (2")) and the mating pipe (e.g. ASME B16.5/Sch. 40, DN 50 (2")). Only apply diameter mismatch correction within the following limit values (listed below) for which test measurements have also been performed.

Flange connection:

- DN 15 (½"): ±20 % of the internal diameter
- DN 25 (1"): ±15 % of the internal diameter
- DN 40 (1½"): ±12 % of the internal diameter
- $DN \ge 50$ (2"): ±10 % of the internal diameter

²⁾ single gas, gas mixture, air: NEL40; natural gas: ISO 12213-2 contains AGA8-DC92, AGA NX-19, ISO 12213-3 contains SGERG-88 and AGA8 Gross Method 1

If the standard internal diameter of the ordered process connection differs from the internal diameter of the mating pipe, an additional measuring uncertainty of approx. 2 % o.r. must be expected.

Example

Influence of the diameter mismatch without using the correction function:

- Mating pipe DN 100 (4"), schedule 80
- Device flange DN 100 (4"), schedule 40
- This installation position results in a diameter mismatch of 5 mm (0.2 in). If the correction function is not used, an additional measuring uncertainty of approx. 2 % o.r. must be expected.
- If the basic conditions are met and the feature is enabled, the additional measuring uncertainty is 1 % o.r.

For detailed information on the parameters for diameter mismatch correction, see the Operating Instructions $\rightarrow B 89$

Accuracy of outputs

The outputs have the following base accuracy specifications.

Current output

Accuracy	±10 μA
----------	--------

Pulse/frequency output

o.r. = of reading

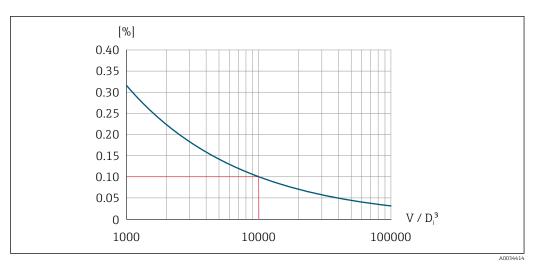

Accuracy	Max. ±100 ppm o.r.
L	

Repeatability

o.r. = of reading

If Repeatability = 0.1 % o.r. with a measured volume $[m^3]$ of $V = 10000 \cdot D_i^3$

The repeatability can be improved if the measured volume is increased. Repeatability is not a device characteristic but a statistical variable that is dependent on the boundary conditions indicated.

Response time

If all the configurable functions for filter times (flow damping, display damping, current output time constant, frequency output time constant, status output time constant) are set to 0, in the event of vortex frequencies of 10 Hz and higher a response time of $max(T_v, 100 \text{ ms})$ can be expected.

In the event of measuring frequencies < 10 Hz, the response time is > 100 ms and can be up to 10 s. T_v is the average vortex period duration of the flowing fluid.

Influence of ambient temperature

Current output

o.r. = of reading

Additional error, in relation to the span of 16 mA:

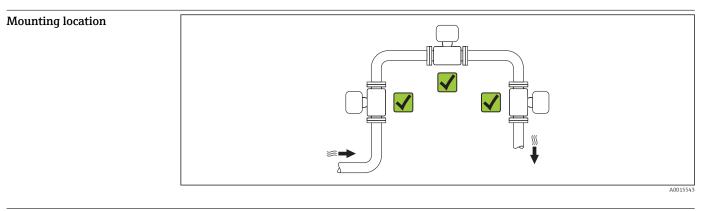

Temperature coefficient at zero point (4 mA)	0.02 %/10 K
Temperature coefficient with span (20 mA)	0.05 %/10 K

Pulse/frequency output

o.r. = of reading

Temperature coefficient	Max. ±100 ppm o.r.
-------------------------	--------------------

Installation

Installation position

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

Vortex meters require a fully developed flow profile as a prerequisite for correct volume flow measurement. Therefore, please note the following:

	Installation position	Compact version	Remote version	
A	Vertical orientation	A0015545	VV ¹⁾	~~
В	Horizontal orientation, transmitter head up		<i>د</i> ر ^{2) 3)}	~~

	Installation position	Compact version	Remote version	
C	Horizontal orientation, transmitter head down	A0015590	イイ ⁴⁾	~~
D	Horizontal orientation, transmitter head at side	A0015592	VV	VV

- In the case of liquids, there should be upward flow in vertical pipes to avoid partial pipe filling (Fig. A). Disruption in flow measurement! In the case of vertical orientation and downward flowing liquid, the pipe always needs to be completely filled to ensure correct liquid flow measurement.
- 2) Danger of electronics overheating! If the fluid temperature is ≥ 200 °C (392 °F), orientation B is not
- permitted for the wafer version (Prowirl D) with nominal diameters of DN 100 (4") and DN 150 (6"). 3) In the case of hot media (e.g. steam or fluid temperature (TM) ≥ 200 °C (392 °F): orientation C or D
- 4) In the case of very cold media (e.g. liquid nitrogen): orientation B or D

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible

Pressure measuring cell

Steam pressure me	asurement	Option DC	
E	 With the transmitter installed at the bottom or at the side Protection against rising 	A0034057	~~
F	 heat Reduction in temperature to almost ambient temperature due to siphon ¹⁾ 	A0034058	~~

G	 Pressure measuring cell with shutoff device above tapping point Discharge of any condensate into the process 	A0034092	~~
Liquid pressure measurement			Option DD
Н	Device with shutoff device at the same level as tapping point	A0034091	~~

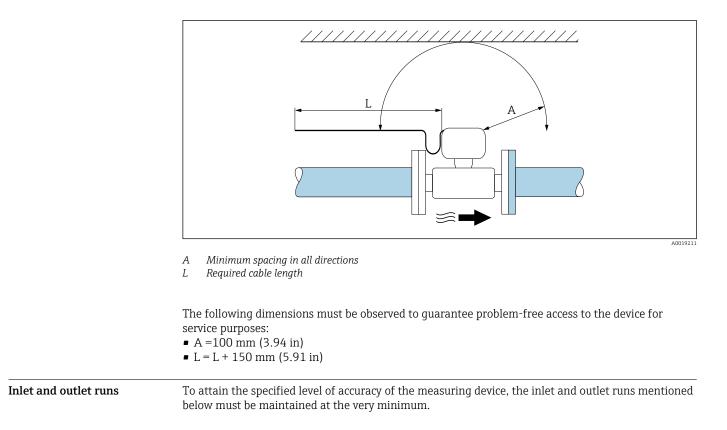

1) Note max. permitted ambient temperature of transmitter $\rightarrow \square$ 49.

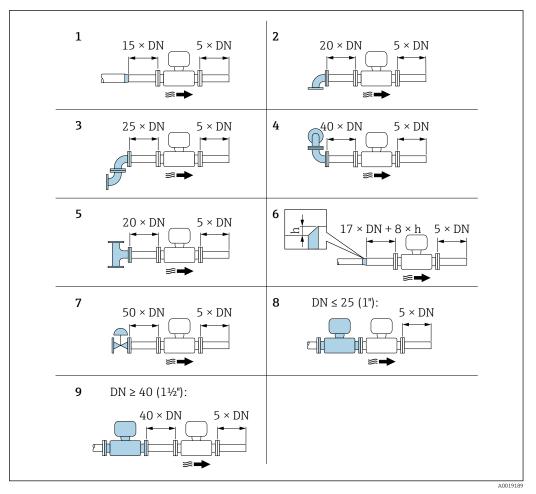

Minimum spacing and cable length

Order code for "Sensor version", option "mass" DC, DD

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible

🖸 14 Minimum inlet and outlet runs with various flow obstructions

- h Difference in expansion
- Reduction by one nominal diameter size 1
- Single elbow (90° elbow) 2
- 3 Double elbow $(2 \times 90^{\circ} \text{ elbows, opposite})$
- Double elbow 3D ($2 \times 90^{\circ}$ elbows, opposite, not on one plane) 4
- 5 T-piece
- 6 Expansion
- Control valve 7
- 8 Two measuring devices in a row where $DN \le 25$ (1"): directly flange on flange
- Two measuring devices in a row where $DN \ge 40 (1\frac{1}{2})$: for spacing, see graphic 9

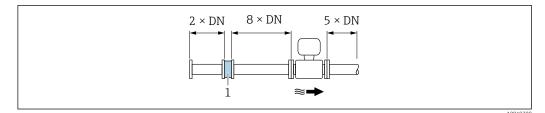

- If there are several flow disturbances present, the longest specified inlet run must be maintained.
- If the required inlet runs cannot be observed, it is possible to install a specially designed flow conditioner $\rightarrow \blacksquare 46$.

Flow conditioner

If the inlet runs cannot be observed, the use of a flow conditioner is recommended.

The flow conditioner is fitted between two pipe flanges and centered by the mounting bolts. Generally this reduces the inlet run needed to $10 \times DN$ with full accuracy.

1 Flow conditioner

The pressure loss for flow conditioners is calculated as follows: Δ p [mbar] = 0.0085 \cdot p [kg/m³] \cdot v² [m/s]

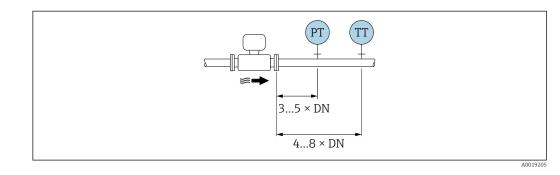

Example for steam	Example for $\rm H_2O$ condensate (80 °C)
p = 10 bar abs.	$\rho = 965 \text{ kg/m}^3$
$t = 240 \text{ °C} \rightarrow \rho = 4.39 \text{ kg/m}^3$	v = 2.5 m/s
v = 40 m/s	$\Delta p = 0.0085 \cdot 965 \cdot 2.5^2 = 51.3 \text{ mbar}$
$\Delta p = 0.0085 \cdot 4.394.39 \cdot 40^2 = 59.7 \text{ mbar}$	

 $\label{eq:relation} \begin{array}{l} \rho: density \mbox{ of the process medium } \\ v: average \mbox{ flow velocity } \\ abs. = absolute \end{array}$

🖪 A specially designed flow conditioner is available from Endress+Hauser: → 🗎 62

Option	Description	Medium temperature range							
BD	Volume high-temperature; Alloy 718; 316L	–200 to +400 °C (–328 to +752 °F), PN 63 to 160/ Class 600							
CD	Mass; Alloy 718; 316L	–200 to +400 °C (–328 to +752 °F)							
Special vers request)	ion for very high fluid temperatures (on	-200 to +440 $^\circ\text{C}$ (–328 to +824 $^\circ\text{F}$), version for hazardous areas							

1) Capacitance sensor

Order code for "Sensor version; DSC sensor; measuring tube"									
Option Description Medium temperature range									
gas/liquid", the f • Only available	or "Sensor version; DSC sensor; measuring t ollowing applies: e for measuring devices with the HART com ease-free cleaning is not possible	rube", option DA "Mass steam" and DB "Mass							
DC	Mass steam; Alloy 718; 316L	-200 to +400 °C (-328 to +752 °F), stainless steel $^{\rm 1)2)}$							
DD"	Mass gas/liquid; Alloy 718; 316L	-40 to +100 °C (-40 to +212 °F), stainless steel $^{2)}$							

1) Siphon enables use for extended temperature range (up to +400 °C (+752 °F)).

2) In steam applications, in conjunction with the siphon, the steam temperature may be higher (up to +400 °C (+752 °F)) than the permitted temperature of the pressure measuring cell. Without a siphon, the gas temperature is restricted due to the maximum permitted temperature of the pressure measuring cell. This applies regardless of whether or not a stop cock is present.

Pressure measuring cell

Order coo	Order code for "Pressure component"									
Option	Description	Medium temperature range								
E F G	Pressure measuring cell 40bar/580psi abs Pressure measuring cell 100bar/1450psi abs Pressure measuring cell 160bar/2320psi abs	-40 to +100 °C (-40 to +212 °F)								

Seals

Order code for "DSC sensor seal"									
Option	Description	Medium temperature range							
А	Graphite (standard)	-200 to +400 °C (-328 to +752 °F)							
В	Viton	-15 to +175 °C (+5 to +347 °F)							
С	Gylon	-200 to +260 °C (-328 to +500 °F)							
D	Kalrez	-20 to +275 °C (-4 to +527 °F)							

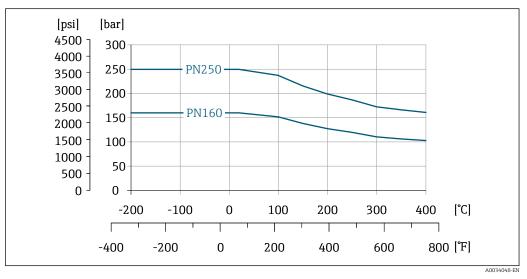

Pressure-temperature ratings

The following pressure/temperature diagrams apply to all pressure-bearing parts of the device and not just the process connection. The diagrams show the maximum permissible medium pressure depending on the specific medium temperature.

The pressure-temperature rating for the specific measuring device is programmed into the software. If values exceed the curve range a warning is displayed. Depending on the system configuration and sensor version, the pressure and temperature are determined by entering, reading in or calculating values.

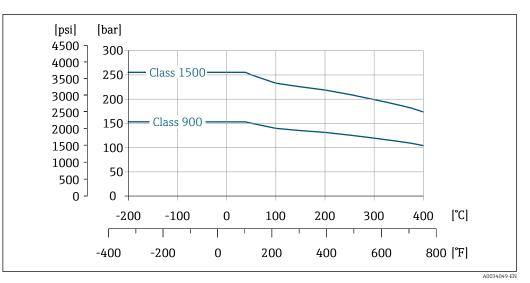

Integral mass vortex: The permitted pressure for the measuring device can be less than indicated in this section, depending on the selected pressure measuring cell.→ 🗎 53

Flange connection: flange according to EN 1092-1 (DIN 2501)

In a stain and the stain and t

Flange connection: flange according to ASME B16.5

E 19 Flange connection material: stainless steel, multiple certifications, 1.4404/F316/F316L

Nominal pressure of sensor The following overpressure resistance values apply to the sensor shaft in the event of a membrane rupture:

Sensor version; DSC sensor; measuring tube	Overpressure, sensor shaft in [bar a]
Volume high-temperature	375
Mass (integrated temperature measurement)	375
Mass steam (integrated pressure/temperature measurement) Mass gas/liquid (integrated pressure/temperature measurement)	375

Pressure specifications

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible

The OPL (over pressure limit = sensor overload limit) for the measuring device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the appropriate standards and further information $\rightarrow \cong 40$. The OPL may only be applied for a limited period of time.

The MWP (maximum working pressure) for the sensors depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the appropriate standards and further information $\rightarrow \textcircled{B}$ 40. The MWP may be applied at the device for an unlimited period. The MWP can also be found on the nameplate.

WARNING

The maximum pressure for the measuring device depends on the lowest-rated element with regard to pressure.

- Note specifications regarding pressure range $\rightarrow \cong 40$.
- The Pressure Equipment Directive (2014/68/EU) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP of the device.
- MWP: The MWP is indicated on the nameplate. This value refers to a reference temperature of +20 °C (+68°F) and may be applied to the device for an unlimited time. Note temperature dependence of MWP.
- OPL: The test pressure corresponds to the over pressure limit of the sensor and may be applied only temporarily to ensure that the measurement is within the specifications and no permanent damage occurs. In the case of sensor range and process connection combinations where the OPL of the process connection is less than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If using the entire sensor range, select a process connection with a higher OPL value.

Sensor	Maximum sensor	measuring range	MWP	OPL
	Lower (LRL)	Upper (URL)		
	[bar (psi)]	[bar (psi)]	[bar (psi)]	[bar (psi)]
40 bar (600 psi)	0 (0)	+40 (+600)	100 (1500)	160 (2 400)
100 bar (1500 psi)	0 (0)	+100 (+1500)	100 (1500)	160 (2 400)
160 bar (2 300 psi)	0 (0)	+160 (+2 300)	400 (6000)	600 (9000)

Pressure loss

For a precise calculation, use the Applicator $\rightarrow \cong 88$.

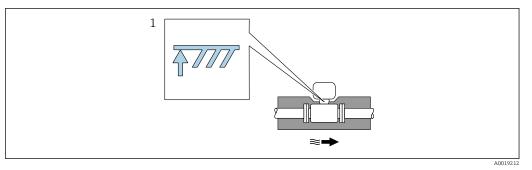

Thermal insulation

For optimum temperature measurement and mass calculation, heat transfer at the sensor must be avoided for some fluids. This can be ensured by installing thermal insulation. A wide range of materials can be used for the required insulation.

This applies for:

- Compact version
- Remote sensor version

The maximum insulation height permitted is illustrated in the diagram:

1 Maximum insulation height

• When insulating, ensure that a sufficiently large area of the housing support remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

Materials

Transmitter housing

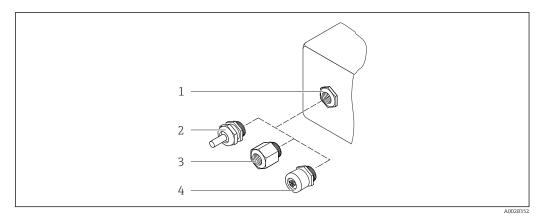

Compact version

- Order code for "Housing", option B "GT18 two-chamber, 316L, compact": Stainless steel, CF3M
- Order code for "Housing", option C "GT20, two-chamber, aluminum, coated, compact": Aluminum, AlSi10Mg, coated
- Window material: glass

Remote version

- Order code for "Housing" option J "GT20 two-chamber, aluminum, coated, remote": Aluminum, AlSi10Mg, coated
- Order code for "Housing", option K "GT18 two-chamber, 316L, remote": For maximum corrosion resistance: Stainless steel, CF3M
- Window material: glass

Cable entries/cable glands

24 Possible cable entries/cable glands

- 1 Female thread M20 × 1.5
- 2 Cable gland $M20 \times 1.5$
- 3 Adapter for cable entry with female thread $G \frac{1}{2}$ or NPT $\frac{1}{2}$ "
- 4 Device plugs

Order code for "Housing", option B "GT18 dual compartment, 316L, compact" option K "GT18 dual compartment, 316L, remote"

Cable entry/cable gland	Type of protection	Material
Cable gland M20 × 1.5	 Non-hazardous area Ex ia Ex ic Ex nA, Ex ec Ex tb 	Stainless steel ,1.4404
Adapter for cable entry with female thread G ½"	Non-hazardous area and hazardous area (except for XP)	Stainless steel, 1.4404 (316L)
Adapter for cable entry with female thread NPT ½"	Non-hazardous area and hazardous area	

Order code for "Housing": option C "GT20 dual compartment, aluminum, coated, compact", option J "GT20 dual compartment, aluminum, coated remote"

Applies also to the following device versions in combination with HART communication mode: Order code for "Sensor version; DSC sensor; measuring tube", option DC "Mass steam; Alloy 718; 316L", option DD "Mass gas/liquid; Alloy 718; 316L"

Cable entry/cable gland	Type of protection	Material
Cable gland M20 × 1.5	Non-hazardous areaEx iaEx ic	Plastic
	Adapter for cable entry with female thread G ½"	Nickel-plated brass
Adapter for cable entry with female thread NPT ½"	Non-hazardous area and hazardous area (except for XP)	Nickel-plated brass
Thread NPT ½" via adapter	Non-hazardous area and hazardous area	

Connecting cable for remote version

- Standard cable: PVC cable with copper shield
- Reinforced cable: PVC cable with copper shield and additional steel wire braided jacket

Connecting cable, pressure measuring cell

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible

Standard cable: PVC cable with copper shield

Sensor connection housing

The material of the sensor connection housing is dependent on the material selected for the transmitter housing.

- Order code for "Housing" option J "GT20 two-chamber, aluminum, coated, remote": Coated aluminum AlSi10Mg
- Order code for "Housing", option K "GT18 two-chamber, 316L, remote": Stainless cast steel, 1.4408 (CF3M)
 - Compliant with:
 - NACE MR0175
 - NACE MR0103

Measuring tubes

DN 15 to 300 (¹/₂ **to 12**"**)**, **pressure ratings PN160/250, Class 900/1500:** Stainless cast steel, CF3M/1.4408

- Compliant with:
- NACE MR0175
- NACE MR0103
- DN15 to 150 ($\frac{1}{2}$ to 6"): AD2000, permitted temperature range –10 to +400 °C (+14 to +752 °F) restricted)

DSC sensor

Order code for "Sensor version; DSC sensor; measuring tube", option BD, CD, DC, DD

Pressure ratings PN 160/250, Class 900/1500:

Parts in contact with medium (marked as "wet" on the DSC sensor flange):

- UNS N07718 similar to Alloy 718/2.4668
- Compliant with:
 - NACE MR01752003
 - NACE MR01032003

Parts not in contact with medium: Stainless steel 1.4301 (304)

Pressure measuring cell

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring devices with the HART communication protocol
- Oil-free or grease-free cleaning is not possible
- Wetted parts:
 - Process connection
 - Stainless steel, 1.4404/316L
 - Membrane
 - Stainless steel, 1.4435/316L
- Non-wetted parts: Housing
 - Stainless steel ,1.4404

Order code for "Sensor version; DSC sensor; measuring tube", option DC, DD

- Siphon³⁾
 - Stainless steel ,1.4571
- Adjusting nut
- Stainless steel ,1.4571
- Pressure gauge valve Stainless steel ,1.4571
- Welded connection on meter body
- Stainless steel, multiple certifications 1.4404/316/316L
- Seals
 Copper

Process connections

Pressure ratings PN 160/250, Class 900/1500:

Stainless steel, triple-certified material, 1.4404/F316/F316L

Available process connections \rightarrow 🗎 76

Seals

- Graphite (standard)
- Sigraflex foilTM (BAM-tested for oxygen applications, "high-grade in the context of TA-Luft Clean Air Guidelines")
- FPM (VitonTM)
- Kalrez 6375TM
- Gylon 3504TM (BAM-tested for oxygen applications, "high-grade in the context of TA-Luft clean air guidelines")

Order code for "Sensor version; DSC sensor; measuring tube", option DC, DD Copper

Housing support

Stainless steel, 1.4408 (CF3M)

Screws for DSC sensor

- Order code for "Sensor version", option BD, CD, DC, DD Stainless steel, A2-80 according to ISO 3506-1 (304)
- On request Stainless steel, 1.4980 according to EN 10269 (Gr. 660 B)

Accessories

Protective cover

Stainless steel, 1.4404 (316L)

Flow conditioner

- Stainless steel, multiple certifications, 1.4404 (316, 316L)
- Compliant with:
 - NACE MR0175-2003
 - NACE MR0103-2003

Flange connections

- Flange connection dimensions and raised face in accordance with: • DIN EN 1092-1
- DIN EN 1092-1
 ASME B16.5
- JIS B2220
- **— —** • •

For information on the different materials used in the flange connections \rightarrow \bigcirc 76

³⁾ Only with order code for "Sensor version; DSC sensor; measuring tube", option DC available.

Operability

Operating concept	Operator-oriented menu structure for user-specific tasks Commissioning Operation Diagnostics Expert level Quick and safe commissioning Guided menus ("Make-it-run" wizards) for applications Menu quidance with brief explanations of the individual parameter functions 	
	 Reliable operation Operation in the following languages: Via local display: English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Swedish, Turkish, Chinese, Japanese, Korean, Bahasa (Indonesian), Vietnamese, Czech Via "FieldCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese Uniform operating philosophy applied to device and operating tools If replacing the electronic module, transfer the device configuration via the integrated memory (integrated HistoROM) which contains the process and measuring device data and the event logbook. No need to reconfigure. 	
	 Efficient diagnostics increase measurement availability Troubleshooting measures can be called up via the device and in the operating tools Diverse simulation options, logbook for events that occur and optional line recorder functions 	
Languages	 Can be operated in the following languages: Via local display: English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Swedish, Turkish, Chinese, Japanese, Korean, Bahasa (Indonesian), Vietnamese, Czech Via "FieldCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese 	
Local operation	Via display module	
	Two display modules are available:	

Ord	er code for "Display; Operation", option C "SD02"	Or	der code for "Display; Operation", option E "SDO	3"
	A0032219		A00	032221
1	Operation with pushbuttons	1	Operation with touch control	

Display elements

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: -20 to +60 °C (-4 to +140 °F)
 The readability of the display may be impaired at temperatures outside the temperature range.

Operating elements

- External operation via touch control (3 optical keys) without opening the housing: \pm , \Box , \blacksquare
- Operating elements also accessible in the various zones of the hazardous area

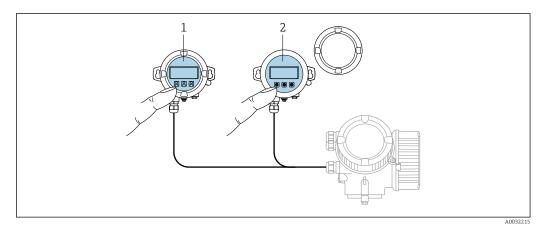

Additional functionality

- Data backup function
 - The device configuration can be saved in the display module.
- Data comparison function The device configuration saved in the display module can be compared to the current device configuration.
- Data transfer function The transmitter configuration can be transmitted to another device using the display module.

Via remote display FHX50

- The remote display FHX50 can be ordered as an optional extra $\rightarrow \blacksquare$ 86.
- The remote display FHX50 cannot be combined with the order code for "Sensor version; DSC sensor; measuring tube", option DC "mass steam" or option DD "mass gas/liquid".

25 FHX50 operating options

- 1 SD02 display and operating module, push buttons: cover must be opened for operation
- 2 SD03 display and operating module, optical buttons: operation possible through cover glass

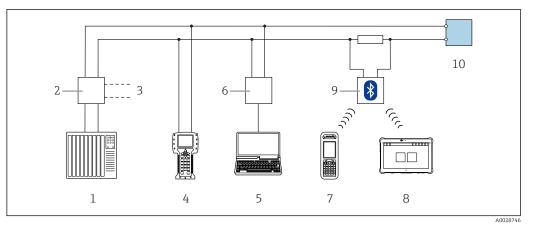

Display and operating elements

The display and operating elements correspond to those of the display module .

Remote operation

Via HART protocol

This communication interface is available in device versions with a HART output.

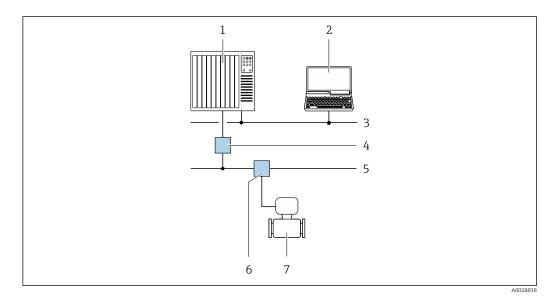

26 Options for remote operation via HART protocol (passive)

- 1 Control system (e.g. PLC)
- 2 Transmitter power supply unit, e.g. RN221N (with communication resistor)
- 3 Connection for Commubox FXA195 and Field Communicator 475
- 4 Field Communicator 475
- 5 Computer with web browser (e.g. Internet Explorer) for accessing computers with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 6 Commubox FXA195 (USB)
- 7 Field Xpert SFX350 or SFX370
- 8 VIATOR Bluetooth modem with connecting cable
- 9 Transmitter

Via PROFIBUS PA network

This communication interface is available in device versions with PROFIBUS PA.

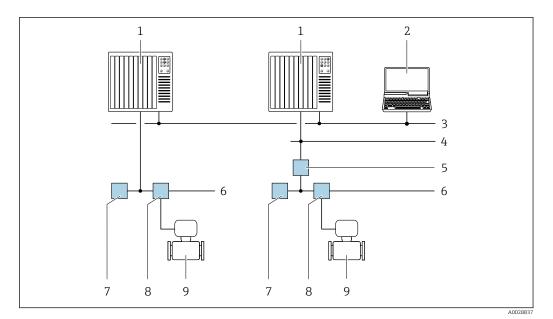

27 Options for remote operation via PROFIBUS PA network

- 1 Automation system
- 2 Computer with PROFIBUS network card
- 3 PROFIBUS DP network
- 4 Segment coupler PROFIBUS DP/PA
- 5 PROFIBUS PA network
- 6 T-box
- 7 Measuring device

Via FOUNDATION Fieldbus network

This communication interface is available in device versions with FOUNDATION Fieldbus.

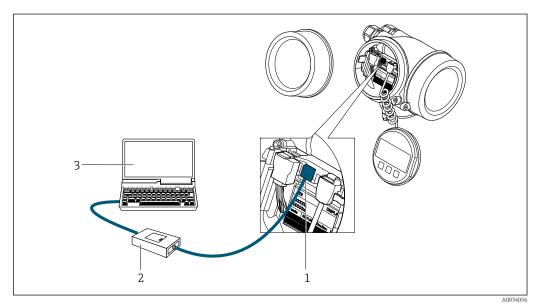

🗟 28 Options for remote operation via FOUNDATION Fieldbus network

- 1 Automation system
- 2 Computer with FOUNDATION Fieldbus network card
- 3 Industry network
- 4 High Speed Ethernet FF-HSE network
- 5 Segment coupler FF-HSE/FF-H1
- 6 FOUNDATION Fieldbus FF-H1 network
- 7 Power supply FF-H1 network
- 8 T-box
- 9 Measuring device

Via service interface (CDI)

1 Service interface (CDI = Endress+Hauser Common Data Interface) of the measuring device

2 Commubox FXA291

3 Computer with FieldCare operating tool with COM DTM CDI Communication FXA291

Certificates and approvals

Currently available certificates and approvals can be called up via the product configurator.

CE mark	The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.	
	Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.	
RCM-tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".	
Ex approval	The measuring device is certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.	
	The separate Ex documentation (XA) containing all the relevant explosion protection data is available from your Endress+Hauser sales center.	

ATEX, IECEx

Currently, the following versions for use in hazardous areas are available:

Functional safety

The measuring device can be used for flow monitoring systems (min., max., range) up to SIL 2 (single-channel architecture; order code for "Additional approval", option LA) and SIL 3 (multichannel architecture with homogeneous redundancy) and is independently evaluated and certified by the TÜV in accordance with IEC 61508.

The following types of monitoring in safety equipment are possible:

i	Functional Safety Manual with information on the SIL device \rightarrow	89 🖺
---	---------------------------------------------------------------------------	------

HART certification	HART interface		
	 The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications: Certified according to HART The device can also be operated with certified devices of other manufacturers (interoperability) 		
FOUNDATION Fieldbus	FOUNDATION Fieldbus interface		
certification	 The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications: Certified in accordance with FOUNDATION Fieldbus H1 Interoperability Test Kit (ITK), revision version 6.2.0 (certificate available on request) Physical Layer Conformance Test The device can also be operated with certified devices of other manufacturers (interoperability) 		
Certification PROFIBUS	PROFIBUS interface		
	 The measuring device is certified and registered by the PNO (PROFIBUS User Organization Organization). The measuring system meets all the requirements of the following specifications: Certified in accordance with PROFIBUS PA Profile 3.02 The device can also be operated with certified devices of other manufacturers (interoperability) 		
Pressure Equipment Directive	The devices can be ordered with or without a PED approval. If a device with a PED approval is required, this must be explicitly stated in the order.		
	 With the identification PED/G1/x (x = category) on the sensor nameplate, Endress+Hauser confirms conformity with the "Essential Safety Requirements" specified in Appendix I of the Pressure Equipment Directive 2014/68/EU. Devices bearing this marking (PED) are suitable for the following types of medium: Media in Group 1 and 2 with a vapor pressure greater than, or smaller and equal to0.5 bar (7.3 psi) Devices not bearing this marking (PED) are designed and manufactured according to good engineering practice. They meet the requirements of Article 4 paragraph 3 of the Pressure Equipment Directive 2014/68/EU. The range of application is indicated in tables 6 to 9 in Annex of the Pressure Equipment Directive 2014/68/EU.

Ordering information

Detailed ordering information is available as follows:

- In the Product Configurator on the Endress+Hauser website: www.endress.com -> Click "Corporate"
 -> Select your country -> Click "Products" -> Select the product using the filters and search field ->
 Open product page -> The "Configure" button to the right of the product image opens the Product
 Configurator.
- From your Endress+Hauser Sales Center:www.addresses.endress.com

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Product generation index	Release date	Product root	On change
	01.09.2013	702B	TI01085D
	01.11.2017	702C	TI01334D

More information is available from your Sales Center or at:

Application packages

•

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Detailed information on the application packages: Special Documentation for the device

Diagnostics functions	Package	Description
	Extended HistoROM	Comprises extended functions concerning the event log and the activation of the measured value memory.
		Event log: Memory volume is extended from 20 message entries (standard version) to up to 100 entries.
		 Data logging (line recorder): Memory capacity for up to 1000 measured values is activated. 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user. Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.

Heartbeat Technology	Package	Description
	Heartbeat Verification	 Heartbeat Verification Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment". Functional testing in the installed state without interrupting the process. Traceable verification results on request, including a report. Simple testing process via local operation or other operating interfaces. Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications. Extension of calibration intervals according to operator's risk assessment.

Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Device-specific accessories

es For the transmitter

Accessories	Description		
Prowirl 200 transmitter	Transmitter for replacement or storage. Use the order code to define the following specifications: • Approvals • Output, Input • Display/operation • Housing • Software Installation Instructions EA01056D (Order number: 7X2CXX)		
Remote display FHX50	 FHX50 housing for accommodating a display module . FHX50 housing suitable for: SD02 display module (push buttons) SD03 display module (touch control) Length of connecting cable: up to max. 60 m (196 ft) (cable lengths available for order: 5 m (16 ft), 10 m (32 ft), 20 m (65 ft), 30 m (98 ft)) 		
	 The measuring device can be ordered with the FHX50 housing and a display module. The following options must be selected in the separate order codes: Order code for measuring device, feature 030: Option L or M "Prepared for FHX50 display" Order code for FHX50 housing, feature 050 (device version): Option A "Prepared for FHX50 display" Order code for FHX50 housing, depends on the desired display module in feature 020 (display, operation): Option C: for an SD02 display module (push buttons) Option E: for an SD03 display module (touch control) 		
	 The FHX50 housing can also be ordered as a retrofit kit. The measuring device display module is used in the FHX50 housing. The following options must be selected in the order code for the FHX50 housing: Feature 050 (measuring device version): option B "Not prepared for FHX50 display" Feature 020 (display, operation): option A "None, existing displayed used" 		
	 The FHX50 remote display cannot be combined with the order code for "Sensor version; DSC sensor; measuring tube": option DC "Mass steam; Alloy 718; 316L (integrated pressure/temperature measurement), -200 to +400 °C (-328 to +750 °F)" option DD "Mass gas/liquid; Alloy 718; 316L (integrated pressure/temperature measurement), -40 to +100 °C (-40 to +212 °F)" 		
	Special Documentation SD01007F		
	(Order number: FHX50)		
Overvoltage protection for 2-wire devices	Ideally, the overvoltage protection module should be ordered directly with the device. See product structure, feature 610 "Accessory mounted", option NA "Overvoltage protection". Separate order necessary only if retrofitting.		
	 OVP10: For 1-channel devices (feature 020, option A): OVP20: For 2-channel devices (feature 020, options B, C, E or G) 		
	Special Documentation SD01090F		
	(Order number OVP10: 71128617) (Order number OVP20: 71128619)		
Protective cover	Is used to protect the measuring device from the effects of the weather: e.g. rainwater, excess heating from direct sunlight or extreme cold in winter.		
	Special Documentation SD00333F		
	(Order number: 71162242)		

Accessories	Description	
Connecting cable for remote version	 Connecting cable available in various lengths: 5 m (16 ft) 10 m (32 ft) 20 m (65 ft) 30 m (98 ft) Reinforced cables available on request. Standard length: 5 m (16 ft) Is always supplied if no other cable length has been ordered. 	
Post mounting kit	Post mounting kit for transmitter. The post mounting kit can only be ordered together with a transmitter. (Order number: DK8WM-B)	

For the sensor

Accessories	Description	
Flow conditioner	Is used to shorten the necessary inlet run. (Order number: DK7ST)	

Communication-specific accessories

Accessories	Description		
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB interface.		
Commubox FXA291	Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop. Technical Information TI405C/07		
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. • Technical Information TI00429F • Operating Instructions BA00371F		
Wireless HART adapter SWA70	Is used for the wireless connection of field devices. The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity. Operating Instructions BA00061S		
Fieldgate FXA42	Is used to transmit the measured values of connected 4 to 20 mA analog measuring devices, as well as digital measuring devices • Technical Information TI01297S • Operating Instructions BA01778S • Product page: www.endress.com/fxa42		
Field Xpert SMT70	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous and non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle. Image: Technical Information TI01342S Operating Instructions BA01709S Product page: www.endress.com/smt70		
Field Xpert SMT77	The Field Xpert SMT77 tablet PC for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1.		

Service-specific accessories	Accessories	Description
	Applicator	 Software for selecting and sizing Endress+Hauser measuring devices: Choice of measuring devices for industrial requirements Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, flow velocity and accuracy. Graphic illustration of the calculation results Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. Applicator is available: Via the Internet: https://portal.endress.com/webapp/applicator As a downloadable DVD for local PC installation.
	W@M	W@M Life Cycle ManagementImproved productivity with information at your fingertips. Data relevant to aplant and its components is generated from the first stages of planning andduring the asset's complete life cycle.W@M Life Cycle Management is an open and flexible information platformwith online and on-site tools. Instant access for your staff to current, in-depthdata shortens your plant's engineering time, speeds up procurement processesand increases plant uptime.Combined with the right services, W@M Life Cycle Management boostsproductivity in every phase. For more information, visitwww.endress.com/lifecyclemanagement
	FieldCare	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. Operating Instructions BA00027S and BA00059S
	DeviceCare	Tool to connect and configure Endress+Hauser field devices.

Accessories Description		
Memograph M graphic data manager	The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick.	
	 Technical Information TI00133R Operating Instructions BA00247R 	
RN221N	Active barrier with power supply for safe separation of 4-20 mA standard signal circuits. Offers bidirectional HART transmission.	
	 Technical Information TI00073R Operating Instructions BA00202R 	
RNS221	Supply unit for powering two 2-wire measuring devices solely in the non- hazardous area. Bidirectional communication is possible via the HART communication jacks.	
	 Technical Information TI00081R Brief Operating Instructions KA00110R 	

Supplementary documentation

For an overview of the scope of the associated Technical Documentation, refer to the following:
 W@M Device Viewer (www.endress.com/deviceviewer): Enter the serial number from nameplate

 Endress+Hauser Operations App: Enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate
